

LCD Segment Drivers

Multi-function LCD Segment Drivers

BU97530KVT-M

MAX 445 Segment(89SEGx5COM)

General Description

The BU97530KVT-M is 1/5, 1/4, 1/3 duty or Static General-purpose LCD driver. The BU97530KVT-M can drive up to 445 LCD Segments directly. The BU97530KVT-M can also control up to 9 General-purpose output pins / 9 PWM output pins.

These products also incorporate a key scan circuit that accepts input from up to 30 keys to reduce printed circuit board wring.

Features

- AEC-Q100 Qualified (Note 1)
- Key Input Function for up to 30 Keys (A key scan is performed only when a key is pressed.)
- Either 1/5, 1/4, 1/3 Duty or Static
 Can be Selected with the Serial Control Data.
 1/5 Duty Drive: Up to 445 Segments can be Driven
 1/4 Duty Drive: Up to 360 Segments can be Driven
 1/3 Duty Drive: Up to 270 Segments can be Driven
 Static Drive: Up to 90 Segments can be Driven
- Selectable Display Frame Frequency for Common and Segment Output Waveforms.
- Configurable Output Pin to Segment Output / PWM Output / General-purpose Output.(Max 9 Pins)
- Built-in OSC Circuit
- Integrated Voltage Detection Type Reset Circuit (VDET)
- No External Component
- Low Power Consumption Design
- Supports Line and Frame Inversion (Note 1) Grade 3

Applications

 Car Audio, Home Electrical Appliance, Meter Equipment etc.

Typical Application Circuit

(Note 2) Insert capacitors between VDD and VSS $C \ge 0.1 \mu F$

Figure 1. Typical Application Circuit

OProduct structure: Silicon monolithic integrated circuit OThis product is not designed protection against radioactive rays.

Key Specifications

Supply Voltage Range: +2.7V to +6.0V
 Operating Temperature Range: -40°C to +85°C
 Max Segments: 445 Segments
 Display Duty Static, 1/3, 1/4, 1/5 Selectable
 Bias: 1/2, 1/3 Selectable
 Interface: 3wire Serial Interface

Package

W (Typ) x D (Typ) x H (Max)

Block Diagram

Figure 2. Block Diagram

Pin Arrangement

Figure 3. Pin Configuration(TOP VIEW)

Absolute Maximum Ratings(VSS = 0.0V)

Parameter	Symbol	Pin / Conditions	Ratings	Unit
Maximum Supply Voltage	VDD	VDD	-0.3 to +7.0	V
Input Voltage	V _{IN1}	SCE, SCL, SDI, OSC	-0.3 to +7.0	V
Input Voltage	$V_{\text{IN}2}$	KI1 to KI5	-0.3 to +7.0	V
Allowable Loss	Pd	-	1.49 ^(Note)	W
Operating Temperature	Topr	-	-40 to +85	°C
Storage Temperature	Tstg	-	-55 to +125	°C

⁽Note) Derate by 1.49mW/°C when operating above Ta=25°C (when mounted in ROHM's standard board).

(Board size: 70mm×70mm×1.6mm material: FR4 board copper foil: land pattern only)

Caution1: Operating the IC over the absolute maximum ratings may damage the IC. The damage can either be a short circuit between pins or an open circuit between pins and the internal circuitry. Therefore, it is important to consider circuit protection measures, such as adding a fuse, in case the IC is

operated over the absolute maximum ratings.

Caution 2:Should by any chance the maximum junction temperature rating be exceeded the rise in temperature of the chip may result in deterioration of the properties of the chip. In case of exceeding this absolute maximum rating, design a PCB boards with power dissipation taken into consideration by increasing board size and copper area so as not to exceed the maximum junction temperature rating.

Recommended Operating Conditions (Ta = -40° C to $+85^{\circ}$ C, VSS = 0.0V)

Parameter	Symbo		Conditions		Ratings		Unit
Parameter	Syllibo	Symbol Conditions	Conditions	Min	Тур	Max	Offic

(Note) Since SDO is an open-drain output, "toc" and "ton" depend on the resistance of the pull-up resistor R_{PU} and the load capacitance C_L.

Power supply for I/O level

1. When SCL is stopped at the low level

2. When SCL is stopped at the high level

Figure 5. Serial Interface Timing

 R_{PU} : $1k\Omega \le R_{PU} \le 10k\Omega$ is recommended. C_L : A parasitic capacitance to VSS in an application circuit. Any component is not necessary to be attached.

Pin Description

Pin Description	າ				
Pin	Pin No.	Function	Active	I/O	Handling when unused
S1/P1/G1 to S9/P9/G9	1 to 9	Segment output for displaying the display data transferred by serial data input. The S1/P1/G1 to S9/P9/G9 pins can also be used as General-purpose or PWM outputs when so set up by the control data.	-	0	OPEN
S10 to S77	10 to 77	Segment output for displaying the display data transferred by serial data input.	-	0	OPEN
KS1/S79 to KS6/S84	83 to 88	Key scan outputs Although normal key scan timing lines require diodes to be inserted in the timing lines to prevent shorts, since these outputs are unbalanced CMOS transistor outputs, these outputs will not be damaged by shorting when these outputs are used to form a key matrix. The KS1/S79 to KS6/S84 pins can be used as segment outputs when so specified by the control data.	-	0	OPEN
KI1/S85 to KI5/S89	89 to 93	Key scan inputs These pins have built-in pull-down resistors. The KI1/S85 to KI5/S89 pins can be used as segment outputs when so specified by the control data.	-	I О	VSS OPEN
COM1 to COM4	79 to 82	Common driver output pins. The frame frequency is fo[Hz].	-	0	OPEN
COM5/S78	78	Common / Segment output for LCD driving Assigned as Common output in1/5 Duty mode and Segment output in Static, 1/3 Duty and 1/4 Duty modes	-	0	OPEN
OSC/S90	97	Segment output for displaying the display data transferred by serial data input. The pin OSC/S90 can be used as external clock input pin when set up by the control data.	-	I О	VSS OPEN
SCE SCL SDI	98 99 100	Serial data transfer inputs. Must be connected to the controller. SCE: Chip enable SCL: Clock for serial data transfer. SDI: Transfer data	H	 	VSS VSS VSS
SDO	95	Output data	-	0	OPEN
VDD	94	Power supply pin of the IC A power voltage of 2.7V to 6.0V must be applied to this pin.	-	-	
VSS	96	Power supply pin. Must be connected to ground.	-	-	-

Control Data Functions

1. KM0,KM1 and KM2: Key Scan output pin / Segment output pin switching control data
These control data bits switch the functions of the KS1/S79 to KS6/S84 output pins between key scan output and segment output.

				Output Pin State							
KM0	KM1	KM2	KS1/S79	KS2/S80	KS3/S81	KS4/S82	KS5/S83	KS6/S84	Number of Input Keys	Reset Condition	
0	0	0	KS1	KS2	KS3	KS4	KS5	KS6	30	-	
0	0	1	S79	KS2	KS3	KS4	KS5	KS6	25	-	
0	1	0	S79	S80	KS3	KS4	KS5	KS6	20	-	
0	1	1	S79	S80	S81	KS4	KS5	KS6	15	-	
1	0	0	S79	S80	S81	S82	KS5	KS6	10	-	
1	0	1	S79	S80	S81	S82	S83	KS6	5	-	
1	1	0	S79	S80	S81	S82	S83	S84	0	-	
1	1	1	S79	S80	S81	S82	S83	S84	0	0	

2. P0,P1,P2 and P3: Segment / PWM / General-purpose output pin switching control data

These control data bits are used to select the function of the S1/P1/G1 to S9/P9/G9 output pins (Segment Output Pins or

PWM Output Pins or General-purpose Output Pins).

P0	P1	P2			S2/P2/G2			S5/P5/G5	S6/P6/G6	S7/P7/G7	S8/P8/G8	S9/P9/G9	Reset Condition

0	0	0	1	P1/G1	S2	S3	S4	S5	S6	S7	S8	S9	-
0	0	1	0	P1/G1	P2/G2	S3	S4	S5	S6	S7	S8	S9	-
0	0	1	1	P1/G1	P2/G2	P3/G3	S4	S5	S6	S7	S8	S9	-
0	1	0	0	P1/G1	P2/G2	P3/G3	P4/G4	S5	S6	S7	S8	S9	-
0	1	0	1	P1/G1	P2/G2	P3/G3	P4/G4	P5/G5	S6	S7	S8	S9	-
0	1	1	0	P1/G1	P2/G2	P3/G3	P4/G4	P5/G5	P6/G6	S7	S8	S9	-
0	1	1	1	P1/G1	P2/G2	P3/G3	P4/G4	P5/G5	P6/G6	P7/G7	S8	S9	-
1	0	0	0	P1/G1	P2/G2	P3/G3	P4/G4	P5/G5	P6/G6	P7/G7	P8/G8	S9	-
1	0	0	1	P1/G1	P2/G2	P3/G3	P4/G4	P5/G5	P6/G6	P7/G7	P8/G8	P9/S9	-
1	0	1	0	S1	S2	S3	S4	S5	S6	S7	S8	S9	-
1	0	1	1	S1	S2	S3	S4	S5	S6	S7	S8	S9	-
1	1	0	0	S1	S2	S3	S4	S5	S6	S7	S8	S9	-
1	1	0	1	S1	S2	S3	S4	S5	S6	S7	S8	S9	-
1	1	1	0	S1	S2	S3	S4	S5	S6	S7	S8	S9	-
1	1	1	1	S1	S2	S3	S4	S5	S6	S7	S8	S9	-

PWM output or General-purpose output pin is selected by PGx(x=1 to 9) control data bit.

When the General-purpose Output Pin Function is selected, the correspondence between the output pins and the respective display data is given in the table below.

Output Pine		Corresponding	Display Data	
Output Pins	1/5 Duty Mode	1/4 Duty Mode	1/3 Duty Mode	Static Mode
S1/P1/G1	D1	D1	D1	D1
S2/P2/G2	D6	D5	D4	D2
S3/P3/G3	D11	D9	D7	D3
S4/P4/G4	D16	D13	D10	D4
S5/P5/G5	D21	D17	D13	D4
S6/P6/G6	D26	D21	D16	D5
S7/P7/G7	D31	D25	D19	D7
S8/P8/G8	D36	D29	D22	D8
S9/P9/G9	D41	D33	D25	D9

When the General-purpose Output Pin Function is selected, the respective output pin outputs a "HIGH" level when its corresponding display data is set to "1". Likewise, it will output a "LOW" level, if its corresponding display data is set to "0". For example, S4/P4/G4 is used as a General-purpose Output Pin in case of 1/4 Duty, if its corresponding display data – D13 is set to "1", then S4/P4/G4 will output "HIGH(VDD)" level. Likewise, if D13 is set to "0", then S4/P4/G4 will output "LOW(VSS)" level.

3. FL: Line Inversion or Frame Inversion switching control data

This control data bit selects either line inversion mode or frame inversion mode.

FL	Inversion Mode	Reset Condition
0	Line Inversion	0
1	Frame Inversion	-

Typically, when driving large capacitance LCD, Line inversion will increase the influence of crosstalk. Regarding driving waveform, refer to LCD driving waveforms.

Control Data Functions - continued

4. DR: 1/3 Bias drive or 1/2 Bias drive switching control data

This control data bit selects either 1/3 Bias drive or 1/2 Bias drive.

DR	Bias Drive Scheme	Reset Condition
0	1/3 Bias drive	0
1	1/2 Bias drive	-

5. DT: 1/5 Duty drive, 1/4 Duty drive, 1/3 Duty drive or Static drive switching control data

These control data bits select either 1/5 Duty drive, 1/4 Duty drive, 1/3 Duty drive or Static drive

DT0	DT1	Duty Drive Scheme	Reset Condition
0	0	Static drive	0
0	1	1/3 Duty drive	-
1	0	1/4 Duty drive	-
1	1	1/5 Duty drive	-

6. FC0, FC1, FC2 and FC3: Common / Segment output waveform frame frequency switching control data

These control data bits set the display frame frequency.

111000 00110	Tor data bita	oot the die	play ITallie	, ,	
FC0	FC1	FC2	FC3	Display Frame Frequency fo(Hz)	Reset Condition

1	1	1	1	f _{osc} / 1536	-

(Note) fosc: Internal oscillation frequency (600 kHz Typ)

7. OC: Internal oscillator operating mode / External clock operating mode switching control data

٠.	. OO. IIIKOITIAI O	contactor operating meach Exte	ornar order operating mode owite	ming control data
	OC	Operating Mode	In/Out Pin(OSC/S90) Status	Reset Condition
	0	Internal oscillator	S90 (segment output)	0
	1	External Clock	OSC (clock input)	_

OC=1: OSC/S90 pin can be used as input clock pin when External Clock is set by the control data.

<External Clock input timing function>

Internal oscillation / external clock select signal behavior is below.

Please input external clock after serial data sending.

8. SC: Segment on/off switching control data

This control data bit controls the on/off state of the segments.

SC	Display State	Reset Condition
0	On	-
1	Off	0

Note that when the segments are turned off by setting SC to "1", the segments are turned off by outputting segment off waveforms from the segment output pins.

Control Data Functions - continued

9. BU0,BU1 and BU2: Normal mode / Power-saving mode switching control data

These control data bits select either normal mode or power-saving mode.

BU0	BU1	BU2	Mode	OSC Oscillator	Segment Outputs	0	utput Pii	n States Star		Key Sc	an	Reset Condition
				Oscillator	Common Outputs	KS1	KS2	KS3	KS4	KS5	KS6	Condition
0	0	0	Normal	Operating	Operating	Н	Н	Н	Н	Н	Н	-
0	0	1				L	L	L	L	L	Ι	-
0	1	0				L	L	L	L	Н	Ι	-
0	1	1	Power			L	L	L	Η	Н	Η	-
1	0	0	-saving	Stopped	Low(VSS)	L	L	Н	Η	Н	Ι	-
1	0	1	-saving			L	Η	Н	Н	Н	Η	-
1	1	0				Η	Η	Н	Н	Н	Η	-
1	1	1				Н	Н	Н	Η	Н	Η	0

Power-saving mode status: S1/P1/G1 to S9/P9/G9 = active only General-purpose output

S10 to OSC/S90 = low (VSS)

COM1 to COM5 = low (VSS)

Stop the LCD drive bias voltage generation circuit

Stop the Internal oscillation circuit

However, serial data transfer is possible when at Power-saving mode.

10. PG1, PG2, PG3, PG4, PG5, PG6, PG7, PG8 and PG9: PWM / General-purpose output switching control data

This control data bit select either PWM output or General-purpose output of Sx/Px/Gx pins. (x=1 to 9)

PGx(x=1 to 9)	Mode	Reset Condition
0	PWM output	0
1	General-purpose output	-

<PWM<->GPO Changing function>

Normal behavior of changing GPO to PWM is below.

- PWM operation is started by command import timing of DD:01 during GPO → PWM change.
- Please take care of reflect timing of new duty setting of DD:10 and DD:11 is from the next PWM.

In order to avoid this operation, please input commands in reverse as below.

Control Data Functions – continued

11. PF0, PF1, PF2, and PF3: PWM output waveform frame frequency switching control data These control data bits set the frame frequency for PWM output waveforms.

PF0	PF1	PF2	PF3	PWM Output Frame Frequency fp(Hz)	Reset Condition
0	0	0	0	f _{OSC} /4096	0
0	0	0	1	f _{OSC} /3840	-
0	0	1	0	f _{OSC} /3584	-
0	0	1	1	f _{OSC} /3328	-
0	1	0	0	f _{OSC} /3072	-
0	1	0	1	f _{OSC} /2816	-
0	1	1	0	f _{OSC} /2560	-
0	1	1	1	f _{OSC} /2304	-
1	0	0	0	f _{OSC} /2048	-
1	0	0	1	f _{OSC} /1792	-
1	0	1	0	f _{OSC} /1536	-
1	0	1	1	f _{OSC} /1280	-
1	1	0	0	f _{OSC} /1024	-
1	1	0	1	f _{OSC} /768	-
1	1	1	0	f _{OSC} /512	-
1	1	1	1	f _{OSC} /256	-

12. CT0, CT1, CT2 and CT3: LCD display contrast switching control data

These control data bits set display contrast

СТО	CT1	CT2	CT3	LCD Drive Bias Voltage for VLCD Level	Reset Condition
0	0	0	0	1.000*VDD	0
0	0	0	1	0.975*VDD	-
0	0	1	0	0.950*VDD	-
0	0	1	1	0.925*VDD	-
0	1	0	0	0.900*VDD	-
0	1	0	1	0.875*VDD	-
0	1	1	0	0.850*VDD	-
0	1	1	1	0.825*VDD	-
1	0	0	0	0.800*VDD	-
1	0	0	1	0.775*VDD	-
1	0	1	0	0.750*VDD	-
1	0	1	1	0.725*VDD	-
1	1	0	0	0.700*VDD	-
1	1	0	1	0.675*VDD	-
1	1	1	0	0.650*VDD	-
1	1	1	1	0.625*VDD	-

This control data bit set VLCD maximum voltage for LCD drive voltage.

Avoid setting VLCD voltage under 2.5V. And ensure "VDD - VLCD > 0.6" condition is satisfied.

Unstable IC output voltage may result if the above conditions are not satisfied.

The relationship of LCD display contrast setting and VLCD voltage

Serial Data Output

1. When SCL is stopped at the low level (Note 1)

Figure 15. Serial Data Output Format

(Note 1)

- 1. X=Don't care
- 2. B0 to B3, A0 to A3: Serial Interface address
- 3. Serial Interface address: 43H
- 4. KD1 to KD30: Key data
- 5. PA: Power-saving acknowledge data
- 6. If a key data read operation is executed when SDO is high, the read key data (KD1 to KD30) and power-saving acknowledge data (PA) will be invalid.

2. When SCL is stopped at the high level (Note 2)

Figure 16. Serial Data Output Format

(Note 2)

- 1. X=Don't care
- 2. B0 to B3, A0 to A3: Serial Interface address
- 3. Serial Interface address: 43H
- 4. KD1 to KD30: Key data
- 5. PA: Power-saving acknowledge data
- 6. If a key data read operation is executed when SDO is high, the read key data (KD1 to KD30) and power-saving acknowledge data (PA) will be invalid.

Output Data

1. KD1 to KD30: Kev Data

When a key matrix of up to 30 keys is formed from the KS1 to KS6 output pins and the KI1 to KI5 input pins and one of those keys are pressed, the key output data corresponding to that key will be set to 1. The table shows the relationship between those pins and the key data bits.

Item	KI1	KI2	KI3	KI4	KI5
KS1	KD1	KD2	KD3	KD4	KD5
KS2	KD6	KD7	KD8	KD9	KD10
KS3	KD11	KD12	KD13	KD14	KD15
KS4	KD16	KD17	KD18	KD19	KD20
KS5	KD21	KD22	KD23	KD24	KD25
KS6	KD26	KD27	KD28	KD29	KD30

2. PA: Power-saving Acknowledge Data

This output data is set to the state when the key is pressed. In that case SDO will go to the low level. If serial data is input during this period and the mode is set (normal mode or power-saving mode), the IC will be set to that mode. PA is set to 1 in the power-saving mode and to 0 in the normal mode.

Power-saving Mode

Power-saving mode is set up by setting at least one of control data BU0, BU1 or BU2 set to 1. The segment outputs will all go low and the common outputs will also go low, and the oscillator on the OSC pin will stop (it will be started by a key press). This reduces power dissipation. This mode is cleared by sending control data with all the BU0 BU1 and BU2 set to 0. However, note that the S1/P1/G1 to S9/P9/G9 outputs can be used as General-purpose output pins according to the state of the P0 to P3 control data bits, even in power-saving mode. (See the Control Data Functions.)

Key Scan Operation Function

1. Kev Scan Timing

The key scan period is 4608T(s). To reliably determine the on/off state of the keys, the BU97530KVT-M scans the keys twice and determines that a key has been pressed when the key data agrees. It outputs a key data read request (a low level on SDO) 9840T(s) after starting a key scan. If the key data does not agree and a key was pressed at that point, it scans the keys again. Thus the BU97530KVT-M cannot detect a key press shorter than 9840T(s).

Figure 17. Key Scan Timing(Note)

(Note) In power-saving mode the high/low state of these pins is determined by the BU0 to BU2 bits in the control data. Key scan output signals are not output from pins that are set "L".

2. In Normal Mode

The pins KS1 to KS6 are set "H".

When a key is pressed a key scan is started and the keys are scanned until all keys are released. Multiple key presses are recognized by determining whether multiple key data bits are set.

If a key is pressed for longer than 9840T(s) (Where T=1/f_{OSC}) the BU97530KVT-M outputs a key data read request (a low level on SDO) to the controller. The controller acknowledges this request and reads the key data. However, if SCE is high during a serial data transfer, SDO will be set "H".

After the controller reads the key data, the key data read request is cleared (SDO is set high) and the BU97530KVT-M performs another key scan. Also note that SDO, being an open-drain output, requires a pull-up resistor (between 1 k Ω and 10k Ω)

Figure 18. Key Scan Operation in Normal Mode

Key Scan Operation Function - continued

3. In Power-saving Mode

The pins KS1 to KS6 are set to high or low by the BU0 to BU2 bits in the control data. (See the <u>Control Data Functions</u> for details.)

If a key on one of the lines corresponding to a KS1 to KS6 pin which is set high is pressed, the oscillation is started and a key scan is performed. Keys are scanned until all keys are released. Multiple key presses are recognized by determining whether multiple key data bits are set.

If a key is pressed for longer than 9840T(s)(Where T=1/f_{OSC}) the BU97530KVT-M outputs a key data read request (a low level on SDO) to the controller. The controller acknowledges this request and reads the key data. However, if SCE is high during a serial data transfer, SDO will be set high.

After the controller reads the key data, the key data read request is cleared (SDO is set high) and the BU97530KVT-M performs another key scan. However, this does not clear power-saving mode. Also note that SDO, being an open-drain output, requires a pull-up resistor (between $1k\Omega$ and $10k\Omega$).

Power-saving mode key scan example

Example: BU0=0, BU1=0, BU2=1 (only KS6 high level output)

These diodes are required to reliable recognize multiple key presses on the KS6 line when power-saving mode state with only KS6 high, as in the above example. That is, these diodes prevent incorrect operations due to sneak currents in the KS6 key scan output signal when keys on the KS1 to KS5 lines are pressed at the same time.

Figure 19. Key Scan Operation in Sleep Mode

Multiple Key Presses

Although the BU97530KVT-M is capable of key scanning without inserting diodes for dual key presses, triple key presses on the KI1 to KI5 input pin lines or multiple key presses on the KS1 to KS6 output pin lines, multiple key presses other than these cases may result in keys that were not pressed recognized as having been pressed. Therefore, a diode must be inserted in series with each key. Applications that do not recognize multiple key presses of three or more keys should ignore the key data if it contains three or more bits that has a value of "1".

Controller Key Data Read Technique

When the controller receives a key data read request from BU97530KVT-M, it performs a key data read acquisition operation using either the Timer Based Key Data Acquisition or the Interrupt Based Key Data Acquisition.

1. Timer Based Key Data Acquisition Technique

Under the Timer Based Key Data Acquisition Technique, the controller uses a timer to determine the states of the keys (on or off) and read the key data. Please refer to the flowchart below.

Key data read processing: Refer to "Serial Data Output"

Figure 20. Flowchart

In this technique, the controller uses a timer to determine key on/off states and read the key data. The controller must check the SDO state when SCE is low every t7 period without fail. If SDO is low, the controller recognizes that a key has been pressed and executes the key data read operation.

The period t7 in this technique must satisfy the following condition. t7>t4+t5+t6

If a key data read operation is executed when SDO is high, the read key data (KD1 to KD30) and power-saving acknowledge data (PA) will be invalid.

- t3: Key scan execution time when the key data agreed for two key scans. (9840T(s))
- t4: Key scan execution time when the key data did not agree for two key scans and the key scan was executed again. (19680T(s)) $T = 1 / f_{OSC}$
- t5: Key address (43H) transfer time
- t6: Key data read time

Figure 21. Timer based key data read operation

Controller Key Data Read Technique - continued

2. Interrupt Based Key Data Acquisition Technique
Under the Interrupt Based Key Data Acquisition Technique, the controller uses interrupts to determine the state of the keys (on or off) and read the key data. Please refer to the flow chart diagram below.

Key data read processing: Refer to "Serial Data Output"

Figure 22. Flowchart

Controller Key Data Read Technique - continued

In this technique, the controller uses interrupts to determine key on/off states and read the key data. The controller must check the SDO state when SCE is low. If SDO is low, the controller recognizes that a key has been pressed and executes the key data read operation. After that the next key on/off determination is performed after the time t8 has elapsed by checking the SDO state when SCE is low and reading the key data. The period t8 in this technique must satisfy t8 > t4.

If a key data read operation is executed when SDO is high, the read key data (KD1 to KD30) and power-saving acknowledge data (PA) will be invalid.

- t3: Key scan execution time when the key data agreed for two key scans. (9840T[s])
- t4: Key scan execution time when the key data did not agree for two key scans and the key scan was executed again. $(19680T[s]) T = 1 / f_{OSC}$
- t5: Key address (43H) transfer time
- t6: Key data read time

Oscillation Stabilization Time

It must be noted that the oscillation of the internal oscillation circuit is unstable for a maximum of 100µs (oscillation stabilization time) after oscillation has started.

Figure 38. Oscillation Stabilization Time

Power-saving Mode Operation in External Clock Mode

After receiving [BU0,BU1,BU2]=[1,1,1], BU97530KVT-M enter to power saving mode synchronized with frame then Segment and Common pins output VSS level.

Therefore, in external clock mode, it is necessary to input the external clock based on each frame frequency setting after sending [BU0.BU1,BU2]=[1,1,1].

For the required number of clock, refer to "6. FC0, FC1, FC2 and FC3: Common / Segment output waveform frame frequency switching control data".

For example, please input the external clock as below.

 $[FC0,FC1,FC2,FC3] = [0,0,0,0]: In case of f_{OSC}/12288 \ setting, it needs over 12288clk, \\ [FC0,FC1,FC2,FC3] = [0,1,0,1]: In case of f_{OSC}/4608 \ setting, it needs over 4608clk, \\ [FC0,FC1,FC2,FC3] = [0,1,0,1]: In case of f_{OSC}/4608 \ setting, it needs over 4608clk, \\ [FC0,FC1,FC2,FC3] = [0,1,0,1]: In case of f_{OSC}/4608 \ setting, it needs over 4608clk, \\ [FC0,FC1,FC2,FC3] = [0,1,0,1]: In case of f_{OSC}/4608 \ setting, it needs over 4608clk, \\ [FC0,FC1,FC2,FC3] = [0,1,0,1]: In case of f_{OSC}/4608 \ setting, it needs over 4608clk, \\ [FC0,FC1,FC2,FC3] = [0,1,0,1]: In case of f_{OSC}/4608 \ setting, it needs over 4608clk, \\ [FC0,FC1,FC2,FC3] = [0,1,0,1]: In case of f_{OSC}/4608 \ setting, it needs over 4608clk, \\ [FC0,FC1,FC2,FC3] = [0,1,0,1]: In case of f_{OSC}/4608 \ setting, it needs over 4608clk, \\ [FC0,FC1,FC2,FC3] = [0,1,0,1]: In case of f_{OSC}/4608 \ setting, it needs over 4608clk, \\ [FC0,FC1,FC2,FC3] = [0,1,0,1]: In case of f_{OSC}/4608 \ setting, it needs over 4608clk, \\ [FC0,FC1,FC2,FC3] = [0,1,0,1]: In case of f_{OSC}/4608 \ setting, it needs over 4608clk, \\ [FC0,FC1,FC2,FC3] = [0,1,0,1]: In case of f_{OSC}/4608 \ setting, it needs over 4608clk, \\ [FC0,FC1,FC2,FC3] = [0,1,0,1]: In case of f_{OSC}/4608 \ setting, it needs over 4608clk, \\ [FC0,FC1,FC3] = [0,1,0,1]: In case of f_{OSC}/4608 \ setting, it needs over 4608clk, \\ [FC0,FC1,FC3] = [0,1,0,1]: In case of f_{OSC}/4608 \ setting, it needs over 4608clk, \\ [FC0,FC1,FC3] = [0,1,0,1]: In case of f_{OSC}/4608 \ setting, it needs over 4608clk, \\ [FC0,FC1,FC3] = [0,1,0,1]: In case of f_{OSC}/4608 \ setting, it needs over 4608clk, \\ [FC0,FC1,FC3] = [0,1,0,1]: In case of f_{OSC}/4608 \ setting, it needs over 4608clk, \\ [FC0,FC1,FC3] = [0,1,0,1]: In case of f_{OSC}/4608 \ setting, it needs over 4608clk, \\ [FC0,FC1,FC3] = [0,1,0,1]: In case of f_{OSC}/4608 \ setting, it needs over 4608clk, \\ [FC0,FC1,FC3] = [0,1,0,1]: In case of f_{OSC}/4608 \ setting, it needs over 4608clk, \\ [FC0,FC1,FC3] = [0,1,0,1]: In case of f_{OSC}/4608 \ setting, it needs o$

[FC0,FC1,FC2,FC3]=[1,1,1,1]: In case of fosc/1536 setting, it needs over 1536clk

Please refer to the timing chart below.

Figure 39. External Clock Stop Timing(1/4-Duty)

Voltage Detection Type Reset Circuit (VDET)

The Voltage Detection Type Reset Circuit generates an output signal that resets the system when power is applied for the first time and when the power supply voltage drops (that is, for example, the power supply voltage is less than or equal to the power down detection voltage (V_{DET} = 1.8V Typ)). To ensure that this reset function works properly, it is recommended that a capacitor be connected to the power supply line so that both the power supply voltage (VDD) rise time when power is first applied and the power supply voltage (VDD) fall time when the voltage drops are at least 1ms.

To refrain from data transmission is strongly recommended while power supply is rising up or falling down to prevent from the occurrence of disturbances on transmission and reception.

Figure 40. VDET Detection Timing

Power supply voltage VDD fall time: t1 > 1ms Power supply voltage VDD rise time: t2 > 1ms Internal reset power supply retain time: t3 > 1ms

When it is difficult to keep above conditions, it is possibility to cause meaningless display due to no IC initialization. Please execute the IC initialization as quickly as possible after Power-on to reduce such an affect. See the IC initialization flow as below.

But since commands are not received when the power is OFF, the IC initialization flow is not the same function as POR.

Set [BU0,BU1,BU2]=[1,1,1](power-saving mode) and SC=1(Display Off) as quickly as possible after Power-on. BU97530KVT-M can receive commands in 0ns after Power-on(VDD level is 90%).

Reset Condition

When BU97530KVT-M is initialized, the internal status after power supply has been reset as the following table.

Instruction	At Reset Condition		
Key Scan Mode	[KM0,KM1,KM2]=[1,1,1]:Keyscan no use		
S1/P1/G1 to S9/P9/G9 Pin	[P0,P1,P2,P3]=[0,0,0,0]:all segment output		
Bias Setting	DR=0:1/3 Bias		
Duty Setting	[DT0,DT1]=[1,0]:1/4 Duty		
Line / Frame Inversion Mode	FL=0:Line Inversion		
Display Frame Frequency	[FC0,FC1,FC2,FC3]=[0,0,0,0]:f _{OSC} /12288		
Display Clock Mode	OC=0:Internal oscillator		
LCD Display	SC=1:OFF		
Power Mode	[BU0, BU1, BU2]=[1,1,1]:Power saving mode		
PWM / GPO Output	PGx=0:PWM output(x=1 to 9)		
PWM Frequency	PWM Frequency [PF0,PF1,PF2,PF3]=[0,0,0,0]:fosc /4096		
PWM Duty	[Wn1 to Wn8]=[0,0,0,0,0,0,0,0]:0/256)xTp		
	(n=1 to 9,Tp=1/fp)		
Display Contrast Setting	[CT0,CT1,CT2,CT3]=[0,0,0,0]:		
	VLCD Level is 1.00*VDD		

Operational Notes

1. Reverse Connection of Power Supply

Connecting the power supply in reverse polarity can damage the IC. Take precautions against reverse polarity when connecting the power supply, such as mounting an external diode between the power supply and the IC's power supply pins.

2. Power Supply Lines

Design the PCB layout pattern to provide low impedance supply lines. Separate the ground and supply lines of the digital and analog blocks to prevent noise in the ground and supply lines of the digital block from affecting the analog block. Furthermore, connect a capacitor to ground at all power supply pins. Consider the effect of temperature and aging on the capacitance value when using electrolytic capacitors.

3. Ground Voltage

Ensure that no pins are at a voltage below that of the ground pin at any time, even during transient condition.

4. Ground Wiring Pattern

When using both small-signal and large-current ground traces, the two ground traces should be routed separately but connected to a single ground at the reference point of the application board to avoid fluctuations in the small-signal ground caused by large currents. Also ensure that the ground traces of external components do not cause variations on the ground voltage. The ground lines must be as short and thick as possible to reduce line impedance.

5. Recommended Operating Conditions

The function and operation of the IC are guaranteed within the range specified by the recommended operating conditions. The characteristic values are guaranteed only under the conditions of each item specified by the electrical characteristics.

6. Inrush Current

When power is first supplied to the IC, it is possible that the internal logic may be unstable and inrush current may flow instantaneously due to the internal powering sequence and delays, especially if the IC has more than one power supply. Therefore, give special consideration to power coupling capacitance, power wiring, width of ground wiring, and routing of connections.

7. Operation Under Strong Electromagnetic Field

Operating the IC in the presence of a strong electromagnetic field may cause the IC to malfunction.

8. Testing on Application Boards

When testing the IC on an application board, connecting a capacitor directly to a low-impedance output pin may subject the IC to stress. Always discharge capacitors completely after each process or step. The IC's power supply should always be turned off completely before connecting or removing it from the test setup during the inspection process. To prevent damage from static discharge, ground the IC during assembly and use similar precautions during transport and storage.

9. Inter-pin Short and Mounting Errors

Ensure that the direction and position are correct when mounting the IC on the PCB. Incorrect mounting may result in damaging the IC. Avoid nearby pins being shorted to each other especially to ground, power supply and output pin. Inter-pin shorts could be due to many reasons such as metal particles, water droplets (in very humid environment) and unintentional solder bridge deposited in between pins during assembly to name a few.

Operational Notes - continued

10. Unused Input Pins

Input pins of an IC are often connected to the gate of a MOS transistor. The gate has extremely high impedance and extremely low capacitance. If left unconnected, the electric field from the outside can easily charge it. The small charge acquired in this way is enough to produce a significant effect on the conduction through the transistor and cause unexpected operation of the IC. So unless otherwise specified, unused input pins should be connected to the power supply or ground line.

11. Regarding the Input Pin of the IC

In the construction of this IC, P-N junctions are inevitably formed creating parasitic diodes or transistors. The operation of these parasitic elements can result in mutual interference among circuits, operational faults, or physical damage. Therefore, conditions which cause these parasitic elements to operate, such as applying a voltage to an input pin lower than the ground voltage should be avoided. Furthermore, do not apply a voltage to the input pins when no power supply voltage is applied to the IC. Even if the power supply voltage is applied, make sure that the input pins have voltages within the values specified in the electrical characteristics of this IC.

Notice

Precaution on using ROHM Products

1. If you intend to use our Products in devices requiring extremely high reliability (such as medical equipment (Note 1), aircraft/spacecraft, nuclear power controllers, etc.) and whose malfunction or failure may cause loss of human life, bodily injury or serious damage to property ("Specific Applications"), please consult with the ROHM sales representative in advance. Unless otherwise agreed in writing by ROHM in advance, ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of any ROHM's Products for Specific Applications.

(Note1) Medical Equipment Classification of the Specific Applications

JAPAN	USA	EU	CHINA
CLASSⅢ	CLASSIII	CLASS II b	ОГУООШ
CLASSIV		CLASSⅢ	CLASSII

- 2. ROHM designs and manufactures its Products subject to strict quality control system. However, semiconductor products can fail or malfunction at a certain rate. Please be sure to implement, at your own responsibilities, adequate safety measures including but not limited to fail-safe design against the physical injury, damage to any property, which a failure or malfunction of our Products may cause. The following are examples of safety measures:
 - [a] Installation of protection circuits or other protective devices to improve system safety
 - [b] Installation of redundant circuits to reduce the impact of single or multiple circuit failure
- 3. Our Products are not designed under any special or extraordinary environments or conditions, as exemplified below. Accordingly, ROHM shall not be in any way responsible or liable for any damages, expenses or losses arising from the use of any ROHM's Products under any special or extraordinary environments or conditions. If you intend to use our Products under any special or extraordinary environments or conditions (as exemplified below), your independent verification and confirmation of product performance, reliability, etc, prior to use, must be necessary:
 - [a] Use of our Products in any types of liquid, including water, oils, chemicals, and organic solvents
 - [b] Use of our Products outdoors or in places where the Products are exposed to direct sunlight or dust
 - [c] Use of our Products in places where the Products are exposed to sea wind or corrosive gases, including Cl₂, H₂S, NH₃, SO₂, and NO₂
 - [d] Use of our Products in places where the Products are exposed to static electricity or electromagnetic waves
 - [e] Use of our Products in proximity to heat-producing components, plastic cords, or other flammable items
 - If Sealing or coating our Products with resin or other coating materials
 - [g] Use of our Products without cleaning residue of flux (even if you use no-clean type fluxes, cleaning residue of flux is recommended); or Washing our Products by using water or water-soluble cleaning agents for cleaning residue after soldering
 - [h] Use of the Products in places subject to dew condensation
- 4. The Products are not subject to radiation-proof design.
- 5. Please verify and confirm characteristics of the final or mounted products in using the Products.
- 6. In particular, if a transient load (a large amount of load applied in a short period of time, such as pulse. is applied, confirmation of performance characteristics after on-board mounting is strongly recommended. Avoid applying power exceeding normal rated power; exceeding the power rating under steady-state loading condition may negatively affect product performance and reliability.
- 7. De-rate Power Dissipation depending on ambient temperature. When used in sealed area, confirm that it is the use in the range that does not exceed the maximum junction temperature.
- 8. Confirm that operation temperature is within the specified range described in the product specification.
- 9. ROHM shall not be in any way responsible or liable for failure induced under deviant condition from what is defined in this document.

Precaution for Mounting / Circuit board design

- 1. When a highly active halogenous (chlorine, bromine, etc.) flux is used, the residue of flux may negatively affect product performance and reliability.
- 2. In principle, the reflow soldering method must be used on a surface-mount products, the flow soldering method must be used on a through hole mount products. If the flow soldering method is preferred on a surface-mount products, please consult with the ROHM representative in advance.

For details, please refer to ROHM Mounting specification

Precautions Regarding Application Examples and External Circuits

- 1. If change is made to the constant of an external circuit, please allow a sufficient margin considering variations of the characteristics of the Products and external components, including transient characteristics, as well as static characteristics.
- You agree that application notes, reference designs, and associated data and information contained in this document are presented only as guidance for Products use. Therefore, in case you use such information, you are solely responsible for it and you must exercise your own independent verification and judgment in the use of such information contained in this document. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of such information.

Precaution for Electrostatic

This Product is electrostatic sensitive product, which may be damaged due to electrostatic discharge. Please take proper caution in your manufacturing process and storage so that voltage exceeding the Products maximum rating will not be applied to Products. Please take special care under dry condition (e.g. Grounding of human body / equipment / solder iron, isolation from charged objects, setting of lonizer, friction prevention and temperature / humidity control).

Precaution for Storage / Transportation

- 1. Product performance and soldered connections may deteriorate if the Products are stored in the places where:
 - [a] the Products are exposed to sea winds or corrosive gases, including Cl2, H2S, NH3, SO2, and NO2
 - [b] the temperature or humidity exceeds those recommended by ROHM
 - [c] the Products are exposed to direct sunshine or condensation
 - [d] the Products are exposed to high Electrostatic
- Even under ROHM recommended storage condition, solderability of products out of recommended storage time period
 may be degraded. It is strongly recommended to confirm solderability before using Products of which storage time is
 exceeding the recommended storage time period.
- 3. Store / transport cartons in the correct direction, which is indicated on a carton with a symbol. Otherwise bent leads may occur due to excessive stress applied when dropping of a carton.
- 4. Use Products within the specified time after opening a humidity barrier bag. Baking is required before using Products of which storage time is exceeding the recommended storage time period.

Precaution for Product Label

A two-dimensional barcode printed on ROHM Products label is for ROHM's internal use only.

Precaution for Disposition

When disposing Products please dispose them properly using an authorized industry waste company.

Precaution for Foreign Exchange and Foreign Trade act

Since concerned goods might be fallen under listed items of export control prescribed by Foreign exchange and Foreign trade act, please consult with ROHM in case of export.

Precaution Regarding Intellectual Property Rights

- 1. All information and data including but not limited to application example contained in this document is for reference only. ROHM does not warrant that foregoing information or data will not infringe any intellectual property rights or any other rights of any third party regarding such information or data.
- 2. ROHM shall not have any obligations where the claims, actions or demands arising from the combination of the Products with other articles such as components, circuits, systems or external equipment (including software).
- 3. No license, expressly or implied, is granted hereby under any intellectual property rights or other rights of ROHM or any third parties with respect to the Products or the information contained in this document. Provided, however, that ROHM will not assert its intellectual property rights or other rights against you or your customers to the extent necessary to manufacture or sell products containing the Products, subject to the terms and conditions herein.

Other Precaution

- 1. This document may not be reprinted or reproduced, in whole or in part, without prior written consent of ROHM.
- 2. The Products may not be disassembled, converted, modified, reproduced or otherwise changed without prior written consent of ROHM.
- In no event shall you use in any way whatsoever the Products and the related technical information contained in the Products or this document for any military purposes, including but not limited to, the development of mass-destruction weapons.
- 4. The proper names of companies or products described in this document are trademarks or registered trademarks of ROHM, its affiliated companies or third parties.

OOO «ЛайфЭлектроникс" "LifeElectronics" LLC

ИНН 7805602321 КПП 780501001 P/C 40702810122510004610 ФАКБ "АБСОЛЮТ БАНК" (ЗАО) в г.Санкт-Петербурге К/С 3010181090000000703 БИК 044030703

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
