

# MLX90366 Triaxis® Position Sensor IC

## Datasheet

## Features and Benefits

- Absolute Rotary & Linear Position Sensor IC
- **Triaxis®** Hall Technology
- Simple Magnetic Design
- Programmable Transfer Characteristic (Multi-Points – Piece-Wise-Linear)
- SENT output (according to SAE J2716-2010)
- 12 bit Resolution - 10 bit Thermal Accuracy
- On Board Diagnostics
- Over-Voltage Protection, under-Voltage Detection
- 48 bit ID Number option
- Automotive Temperature Range
- AEC-Q100 Qualified
- Reliable NoPCB Module Integration
- DMP-4 RoHS Compliant
- Output Thermal Offset correction

DMP-4

## Applications

- Absolute Rotary Position Sensor
- Absolute Linear Position Sensor
- Pedal Position Sensor
- Steering Wheel Position Sensor
- Throttle Position Sensor
- Float-Level Sensor
- Ride Height Position Sensor
- Non-Contacting Potentiometer

## Description

The MLX90366 is a monolithic sensor IC sensitive to the flux density applied orthogonally and parallel to the IC surface.

The MLX90366 is sensitive to the three components of the flux density applied to the IC (i.e.  $B_x$ ,  $B_y$  and  $B_z$ ). This allows the MLX90366 with the correct magnetic circuit to decode the absolute position of any moving magnet (e.g. rotary position from 0 to 360 Degrees or linear displacement, stroke). It enables the design of novel generation of non-contacting position sensors that are frequently required for both automotive and industrial applications.

MLX90366 provides SENT Frames encoded according the Throttle sensor format or Secure Sensor format. The circuit delivers enhanced serial messages providing error codes, and user-defined values.

MLX90366 Position Sensor Assembly enables the realization of position sensor modules for which a PCB is no longer needed: this yield to an increase of the electrical, mechanical and environmental robustness of the final application.

Figure 1 – Block Diagram

## 3. Glossary of Terms

Gauss (G), Tesla (T)	Units for the magnetic flux density - 1 mT = 10 G
TC	Temperature Coefficient (in ppm/Deg.C.)
NC	Not Connected
SENT	Single Edge Nibble Transmission
PWM	Pulse Width Modulation
ADC	Analog-to-Digital Converter
DAC	Digital to Analog Converter
LSB	Least Significant Bit
MSB	Most Significant Bit
DNL	Differential Non-Linearity
INL	Integral Non-Linearity
RISC	Reduced Instruction Set Computer
ASP	Analog Signal Processing
DSP	Digital Signal Processing
ATAN	Trigonometric function: arctangent (or inverse tangent)

IMC	Integrated Magneto-Concentrator (IMC®)
CoRDIC	Coordinate Rotation Digital Computer (i.e. iterative rectangular-to-polar transform)
EMC	Electro-Magnetic Compatibility
FE	Falling Edge
RE	Rising Edge
FW	Firmware
HW	Hardware
MT3V	More than 3V Condition (when VDD >3V with 0.1V hysteresis)
MT4V	More than 4V Condition (when VDD <4V with 0.1V hysteresis)
LSD	Low Side Driver = Open drain N
PP	Push-Pull
DMP	Dual Mold Package

Table 2 – Glossary of Terms

## 4. Pinout

PIN	Pin name
1	VSS (Ground)
2	VDD
3	OUT
4	VSS (Ground)

Either Vss pin can be used for grounding, but always leave 1 floating.

## 5. Absolute Maximum Ratings

Parameter	Value
Supply Voltage, VDD (overvoltage)	+ 24 V
Reverse Voltage Protection	– 12 V (breakdown at -14 V)
Positive Output Voltage	+ 18 V (breakdown at 24 V)
Output Current (I <sub>OUT</sub> )	+ 30 mA (in breakdown)
Reverse Output Voltage	– 0.3 V
Reverse Output Current	– 50 mA (in breakdown)
Operating Ambient Temperature Range, T <sub>A</sub>	– 40 ... + 150 Deg.C
Storage Temperature Range, T <sub>S</sub>	– 40 ... + 150 Deg.C
Magnetic Flux Density	± 1 T

Exceeding the absolute maximum ratings may cause permanent damage. Exposure to absolute maximum-rated conditions for extended periods may affect device reliability.

## 6. Electrical Specification

DC Operating Parameters at Nominal Supply Voltage (unless otherwise specified) and for T<sub>A</sub> as specified by the Temperature suffix (L).

Parameter	Symbol	Test Conditions	Min	Typ	Max	Units
Nominal Supply Voltage	VDD		4.5	5	5.5	V
Supply Current <sup>(1)</sup>	I <sub>DD</sub>	Power saving Enabled, All modes For Outmode=1		6	10 <sup>(2)</sup> 10 <sup>(2)</sup>	mA
Isurge Current <sup>(3)</sup>	I <sub>surge</sub>				20	mA
Power-On reset (rising)	HPOR_LH	Refer to internal voltage Vdig	2	2.25	2.5	V
Power-On reset Hysteresis	HPOR_Hyst		50		200	mV
Start-up Level (rising)	MT4V_LH		3.8	4.0	4.2	V
Start-up Hysteresis	MT4V_Hyst		50		200	mV
PTC Entry Level (rising)	MT7V_LH		5.8	6.2	6.6	V
PTC Entry Level Hysteresis	MT7V_Hyst		50		200	mV
Output Short Circuit Current	I <sub>SHORT</sub>	V <sub>out</sub> = 0 V V <sub>out</sub> = 5 V V <sub>out</sub> = 18 V (T <sub>A</sub> = 25 Deg.C)			15 15 18	mA mA mA
Output Load	R <sub>L</sub>	Pull-down to Ground Pull-up to 5V	1 1	10 10	∞ ∞	kΩ kΩ
Active Diagnostic Output Level	Dsat_lo	Pull-up load R <sub>L</sub> ≥ 10 kΩ to 5 V Pull-up load R <sub>L</sub> ≥ 5 kΩ to 18V		0.5 2	2 3	%VDD
Digital Saturation Output Level	Dsat_hi	Pull-down load R <sub>L</sub> ≥ 5 kΩ Pull-down load R <sub>L</sub> ≥ 10 kΩ	95 97.5	97 98.5		%VDD
Passive Diagnostic Output Level (Broken Track Diagnostic) <sup>(4)</sup>	BV <sub>ssPD</sub>	Broken V <sub>ss</sub> & Pull-down load R <sub>L</sub> ≥ 5 kΩ Pull-down load R <sub>L</sub> ≥ 10 kΩ	95 97.5			%VDD
	BV <sub>ssPU</sub>	Broken V <sub>ss</sub> & Pull-up load R <sub>L</sub> ≥ 4.7kΩ	99.5	100		%VDD
	BV <sub>DDPD</sub>	Broken V <sub>DD</sub> & Pull-down load R <sub>L</sub> ≥ 4.7kΩ		0	0.5	%VDD
	BV <sub>DDPU</sub>	Broken V <sub>DD</sub> & Pull-up load R <sub>L</sub> ≥ 5kΩ			2	%VDD
Digital output Ron	R <sub>on</sub>	Diag_low Diag_hi	15 120		30 300	Ohms

1 Averaged current consumption, for the dual version, the supply current is multiplied by 2.

2 To reach 10mA, the power saving option should be enabled. This option switches off and on internal blocks dynamically. It can be disabled in case of extreme emission requirements; the maximum supply current consumption is then increased up to 12mA.

3 The specified value is valid during early start-up time only; the current might dynamically exceed the specified value, shortly, during the Start-up phase.

4 For detailed information on diagnostics, see also section 15

## 7. Timing Specification

DC Operating Parameters at Nominal Supply Voltage (unless otherwise specified) and for T<sub>A</sub> as specified by the Temperature suffix (L).

Parameter	Symbol	Test Conditions	Min	Typ	Max	Units
Main Clock Frequency	Ck	All contributors included thermal drift	12.6	13.3	14	MHz
Main Clock Frequency Thermal Drift	ΔTck				± 3%	Ck <sub>NOM</sub>
Tick time		Default EEPROM setting		3		μs
Low pulse tick count		Exact value for Ck = 13.3 MHz The typical value will be affected by any variation of the clock	4	5		ticks
SENT Frame Period	tframe			882		μs
Internal Angle Measurement Period	tper			441		μs
First Angle Measurement to Sync Pulse latency	ta1			1084		μs
Second Angle Measurement to Sync Pulse latency	ta2			643		μs
Field Change to SENT Data : Average Latency	Latency		FILTER = 1 (recommended) SENT Transmission Included	1745		1745
SENT Frame Tick Count		Default EEPROM setting	294		294	
Watchdog	Twd		114.5	118	121.5	ms
Start-up Time (up to first sync pulse)	Tsu1			1.8		ms
Start-up Time (up to first data received)	Tsu2	Last pause pulse not included		5.9	6.3	ms
Rise Time @ Cable		Thresholds : 0.5V and 4.5V See section 9.2	2.97		5.31	μs
Rise Time @ Receiver			5.07		6.84	μs
Fall Time @ Cable			2.65		2.82	μs
Fall Time @ Receiver			4.84		4.9	μs

## 7.2. Application diagram used for rise and fall time measurement

Figure 6 - Schematic used for rise and fall time measurements (ref: J2716 Rev Jan 2010 Fig. 6.3.4)

Component	Value	Unit
C01	10 ± 25%	nF
C02	not mounted	nF
R01	not mounted	Ohms
Cinput	68	pF
CTau	2.2	nF
Cf	100	pF
RTau	568	Ohms
Rf	10	kOhms
RPU	14.7	kOhms
RV	not mounted	Ohms

Component values used for rise and fall time measurements (ref: J2716 Rev Jan 2010 Fig. 6.3.4)

## 8. Accuracy Specification

DC Operating Parameters at Nominal Supply Voltage (unless otherwise specified) and for  $T_A$  as specified by the Temperature suffix (L).

Parameter	Symbol	Test Conditions	Min	Typ	Max	Units
ADC Resolution on the raw signals sine and cosine <sup>(5)</sup>	RADC			15		bits
Thermal Offset Drift #1 <sup>(6)</sup> at the DSP input (excl. DAC and output stage)		$T_A$ from -40 to 125°C $T_A$ from -40 to 150°C	-60 -90		+60 +90	LSB15
Thermal Drift of Sensitivity Mismatch <sup>(7)</sup>		XY axis XZ (YZ) axis	- 0.5 -1		+ 0.5 +1	%
Magnetic Angle phase error		$T_A = 25^\circ\text{C}$ – XY axis $T_A = 25^\circ\text{C}$ – XZ axis $T_A = 25^\circ\text{C}$ – YZ axis	-0.3 -2 -2		0.3 2 2	Deg.
Thermal Drift of Magnetic Angle phase error		XY axis, XZ (YZ) axis		0.01		Deg.
XY – Intrinsic Linearity Error <sup>(8)</sup>	Le	$T_A = 25^\circ\text{C}$ – factory trim. “SMISM”	-1		1	Deg.
XZ - Intrinsic Linearity Error <sup>(8)</sup>	Le	$T_A = 25^\circ\text{C}$ – “k” trimmed for XZ	-2.5	$\pm 1.25$	+2.5	Deg.
YZ - Intrinsic Linearity Error <sup>(8)</sup>	Le	$T_A = 25^\circ\text{C}$ – “k” trimmed for YZ	-2.5	$\pm 1.25$	+2.5	Deg.
Noise pk-pk <sup>(9)</sup>		Filter = 0; 40mT Filter = 1 (recommended); 30mT Filter = 2; 20mT		0.10 0.10 0.10	0.2 0.2 0.2	Deg.

5 16 bits corresponds to 15 bits + sign. Internal computation is performed using 16 bits.

6 For instance, in case of a rotary position sensor application, Thermal Offset Drift #1 equal  $\pm 60\text{LSB15}$  yields to max.  $\pm 0.3$  Deg. angular error for the computed angular information (output of the DSP). This is only valid if  $k = 1$ .

7 For instance, in case of a rotary position sensor application, Thermal Drift of Sensitivity Mismatch equal  $\pm 0.5\%$  yields to max.  $\pm 0.15$  Deg. angular error for the computed angular information (output of the DSP).

8 The Intrinsic Linearity Error refers to the IC itself (offset, sensitivity mismatch, orthogonality) taking into account an ideal rotating field for BX and BY. Once associated to a practical magnetic construction and the associated mechanical and magnetic tolerances, the output linearity error increases. However, it can be improved with the multi-point end-user calibration.

9 Noise pk-pk (peak-to-peak) is here intended as 6 times the Noise standard Deviation. The application diagram used is described in the recommended wiring. For detailed information, refer to section Filter in application mode (Section 14.5).

## 9. Magnetic Specification

DC Operating Parameters at Nominal Supply Voltage (unless otherwise specified) and for TA as specified by the Temperature suffix (L).

Parameter	Symbol	Test Conditions	Min	Typ	Max	Units
Magnetic Flux Density	$B_X, B_Y^{(10)}$	$\sqrt{B_X^2 + B_Y^2}$			70 <sup>(11)</sup>	mT
Magnetic Flux Density	$B_Z$				126	mT
Magnetic Flux Norm	Norm	$\sqrt{B_X^2 + B_Y^2 + (B_Z/1.2)^2}$	20 <sup>(12)</sup>			mT
IMC Gain in X and Y <sup>(13)</sup>	GainIMC <sub>XY</sub>		1.2	1.4	1.8	
IMC Gain in Z	GainIMC <sub>Z</sub>		1.1		1.3	
k factor	k	GainIMC <sub>XY</sub> / GainIMC <sub>Z</sub>	1	1.2	1.5	
Magnet Temperature Coefficient	TCm		-2400		0	ppm/Deg.C

<sup>10</sup> The condition must be fulfilled for at least one field BX or BY.

<sup>11</sup> Above 70 mT, the IMC® starts saturating yielding to an increase of the linearity error.

<sup>12</sup> Below 20 mT, the performances slightly degrade due to a reduction of the signal-to-noise ratio, signal-to-offset ratio.

<sup>13</sup> This is the magnetic gain linked to the Integrated Magneto Concentrator structure. This is the overall variation. Within one lot, the part to part variation is typically ± 10% versus the average value of the IMC gain of that lot.

## 10. CPU & Memory Specification

The DSP is based on a 16 bit RISC  $\mu$ Controller. This CPU provides 2.5 Mips while running at 10 MHz.

Parameter	Symbol	Test Conditions	Min	Typ	Max	Units
ROM				10		KB
RAM				384		B
EEPROM				128		B

## 11. Traceability Information

Every device contains a unique ID that is programmed by Melexis in the EEPROM. Melexis strongly recommends storing this value during the EOL (End-Of-Line) programming to ensure full traceability of the final product.

These parameters shall never be erased during the EOL programming.

Parameter	Comments	Default Values	Parameter # bit
MELEXISID1	Melexis identification reference	MLX	16
MELEXISID2	Melexis identification reference	MLX	16
MELEXISID3	Melexis identification reference	MLX	16

## 12. End-User Programmable Items

Parameter	Comments	AxU-xxx		ADS-xxx		AxV-xxx		AxX-xxx

Melexis strongly recommends checking the User Identification data (Parameters USERID) during EOL programming.

## 13. SENT output Protocol

### 13.1. Generality

The MLX90366 complies with the sub-set of the norm J2716 Revised JAN2010, “A.1 Throttle Position” or “A.3 Single Secure Sensors”

### 13.2. Throttle position / Single Secure Fast Channel

MLX90366 delivers SENT frames according the Throttle Position (not available in ADS-xxx version) or Single Secure format.

This format is explicitly described in this section.

#### 13.2.1. Frame Content

The MLX90366 SENT frames have 6 data nibbles, and are formatted according the below table

Single Secure									
	Nibble 0	Nibble 1	Nibble 2	Nibble 3	Nibble 4	Nibble 5	Nibble 6	Nibble 7	
<b>SENT Frame :</b>	Status	CH1-MSN	CH1-MidN	CH1-LSN	RC-MSN	RC-LSN	CCH1-MSN	CRC	Optional Pause
optional error code		F	F	8+EE_REPORT			0		
Status[0]	Channel 1 indicator ( "1" = error, "0" otherwise )								
Status[1]	0								
Status[2]	Enhanced Serial Message ( dissable option)								
Status[3]	Enhanced Serial Message ( dissable option)								
CRC	Enhanced CRC (the legacy CRC is optional)								
Ch1	12 bit angle								
RC	8 bit rolling counter								
CCH1	Inverted Copy Ch1								

Throttle position									
	Nibble 0	Nibble 1	Nibble 2	Nibble 3	Nibble 4	Nibble 5	Nibble 6	Nibble 7	
<b>SENT Frame :</b>	Status	CH1-MSN	CH1-MidN	CH1-LSN	CH2-LSN	CH2-MidN	CH2-MSN	CRC	Optional Pause
optional error code		F	F	8+EE_REPORT	F	F	8+EE_REPORT		
Status[0]	Channel 1 indicator ( "1" = error, "0" otherwise )								
Status[1]	Channel 2 indicator ( "1" = error, "0" otherwise )								
Status[2]	Enhanced Serial Message ( dissable option)								
Status[3]	Enhanced Serial Message ( dissable option)								
CRC	Enhanced CRC (the legacy CRC is optional)								
Ch1	12 bit angle								
Ch2	12 bit angle = Inverted CH1 ( optional : FFF-CH1 or FF9-CH1 )								

## 13.2.2. Diagnostic Reporting through the fast channel

### Diagnostic Reporting, bit Status[0]

The bit Status[0] is high whenever the three following conditions are met:

1. A diagnostic (analog/environmental) detects an error<sup>(14)</sup>
2. The reporting of the above error is enabled<sup>(15)</sup>
3. The debouncing time has elapsed.

### Diagnostic Reporting, Channel 1

The diagnostic can be reported through the 12 bit payload of channel 1, and not only through the status bit Status[0].

The EEPROM parameters SERIALERROR controls the diagnostic reporting through channel 1 as follows:

If SERIALERROR =0, the channel 1 reports the angle, and not the diagnostic, as if no diagnostic.

The error is reported only thanks to the Status bits.

If SERIALERROR >0, the channel1 payload contains the value Channel1 = (4088 + SERIALERROR)

### Diagnostic Reporting Time

The Diagnostic Reporting Time is programmable (defined as multiple of a macro-cycle unit time).

A macro-cycle is a sequence of 20 angle acquisitions, and has a duration of approximately 6 ms.

### Diagnostic Debouncing

The Diagnostic Reporting is Debounced. The debouncing parameters are user-programmable, by steps of approximately 6 ms.

### Pause pulse

A pause pulse, as defined by the standard, is present at the end of every frame.

The pause pulse mode can be disabled (not for ADS-xxx version). Please contact our Direct Sales team to obtain the complete procedure for deactivating the pause pulse mode.

The pause pulse length is adjusted by the circuit so that the frame period is constant.

---

<sup>14</sup> A diagnostic of type digital cause the circuit to switch in fail-safe-mode

<sup>15</sup> See EEPROM bits EE\_DIAG\_SETTINGS

The field sensing and the frame synchro pulse are in sync.

## Fast Channel CRC

The MLX90366 features the new recommended implementation. Optionally the legacy implementation can be selected for AxU-xxx, AxV-xxx, and AxX-xxx version.

## 13.3. Slow Channel

### 13.3.1. Enhanced Serial Message

The circuit encodes the slow messages according the Enhanced Serial Message Format as specified at Chapter 5.2.4.3 of the SENT norm, except for the following restriction:

The configuration bit is always 0, meaning that the payload consists in 12-bit data and 8-bit message ID.

### 13.3.2. Serial Message Sequence for AxU-xxx, AxV-xxx and AxX-xxx

The circuit complies with the following sub-set specifications of the norm for pressure sensors.

(The norm for the angular sensor case does not specify the serial message format)

ID	Item	12 bit data	Comment	AxU-xxx		AxV-xxx and AxX-xxx

Table 3 - Serial Message Sequence

The first part (positions 1 to 24) provides the Error Code and the Sensor ID alternatively. The second part is optional as a whole enabled with EEPROM bit (EE\_ExtendedSequence=1). This second part consists of the error code, up to 8 OEM -defined Code.

The temperature can be derived from SENT ID 23, TEMP sensor, with the following equation:

$$\text{SENT@ ID 23} = 8 * (T[C] - 35[C]) + 865 \text{ lsb12}$$

The accuracy of the actual Temperature is around  $\pm 10$  Deg.C.

### 13.3.3. Serial Message Sequence for ADS-xxx

ID	Item	12 bit data	Comment	ADS-xxx	
				#	Optional part
29	Sensor ID	Prog.	EEPROM: USERID1[11:0]	1	
01	Error Code	RAM	See section 13.3.5	2	
2A	Sensor ID	Prog.	EEPROM: USERID2[7:0], USERID1[15:12]	3	
01 / 80	Error Code / User-defined RAM value	RAM	RAM variable @ address EE_RAM_PROBE_ADDR e.g. Temp, GainCode, FieldStrength	4	
2B	Sensor ID	Prog.	EEPROM: USERID3[3:0], USERID2[15:8]	5	
01	Error Code	RAM		6	
2C	Sensor ID	Prog.	EEPROM: USERID3[15:4]	7	
01 / 80	Error Code / User-defined RAM value	RAM		8	
9	06	SENT Revision	003	9	X
10	01	Error Code	RAM	10	X
11	EEPROM: SERIALID1	User-defined #1	EEPROM: SERIALDATA1	11	X
12	01 / 80	Error Code / User-defined RAM value	RAM	12	X
13	EEPROM: SERIALID2	User-defined #2	EEPROM: SERIALDATA2	13	X
14	01	Error Code	RAM	14	X
15	EEPROM: SERIALID3	User-defined #3	EEPROM: SERIALDATA3	15	X
16	01 / 80	Error Code / User-defined RAM value	RAM	16	X
17	EEPROM: SERIALID4	User-defined #4	EEPROM: SERIALDATA4	17	X
18	01	Error Code	RAM	18	X

The payloads of the positions 4, 8 (and 12, 16 if relevant) are user-defined. Three possibilities:

1. Error Code
2. 12 LSBs of a user-defined RAM value
3. 12 MSBs of a user-defined RAM value

The positions 4, 8, 12, 16 refer necessarily to the same user-defined RAM address. Three RAM addresses are of interest:

Variable name	Address	Description
ramTempSens	4E	Calibrated Temperature sensor value
VG	46	Actual Virtual Gain
Norm	48	Actual field norm

The actual absolute Temperature (T) can be derived from the 12 MSBs of ramTempSens (see possibility 3 above) using the following formula (decimal):

$$\text{ramTempSens} = 8 \times (T - 35) + 2048$$

The accuracy of the actual Temperature is around  $\pm 10$  DegC

### 13.3.4. Serial message sequence period

Sequence Length (serial message count)	Sequence Length (frame count)	Sequence Period (ms, typical)
8	144	121
18	324	273
24	432	381
32	576	509
40	720	636

### Error Code Rate

The Error Code are on purpose transmitted every second message, to maximize the rate, which equals then 36 SENT frames.

### 13.3.5. Serial Message Error Code

The list of error and status messages transmitted in the 12-bit Enhanced Serial Message data field when Enhance Serial Message ID is \$01 is given in the following Table.

12 Bit Data	Diagnostic	Comments
\$000	No error	
\$801	GainOOS	Front-end Gain code Out-of-spec (too low, too high)
\$808	ADCSatura	Diag
\$810	ADCMonitor	ADC monitor
\$820	VanaMoni	Analog Internal Supply Too Low
\$840	VddMoni	External Supply Too Low
\$880	Rough Offset	Front-end Rough Offset too low, too high
\$900	TempMonitor	Temperature Sensor monitor

In case multiple errors occur, then the resulting 12 bit enhanced serial message data will be the OR-operation of the individual data values. Example \$809 = GainOOS + ADCsatura

## 13.4. Start-up

During the chip initialization, the output remains high until the circuit emits four initialization frames (all 6 data nibble zero). The fifth frame is not an initialization frame but a valid frame containing a measured angle. See also section 7 “Timing specifications”. The first four frames conform to the SENT specification and include a valid CRC.

## 13.5. Field sensing (ADC conversions) and the frame Synchro pulse

By default setting of the Timer period and Filter =1, the digital angle (fast channel payload) results of the average of two angles. These angles are themselves computed from 4 ADCs values.

The time between the ADCs and the frame synchronization pulse is constant.

As a result, the phase delay between the magnetic field angle and the SENT synchronization pulse is constant, allowing filtering at the ECU side.

See also section 7 Timing Specification.

# 14. Description of End-User Programmable Items

## 14.1. Output Transfer Characteristic

To define the transfer function (LNR):

Parameter	Comments	Value	Unit
CW	For all versions	0 → CounterClockWise 1 → ClockWise	LSB
DP	For all versions	0 ... 359.9999	Deg.
CLAMPLOW	For all versions	0 ... 100	%
CLAMPHIGH	For all versions	0 ... 100	%
LNRAX, LNRBX, LNRXC	3pts LNR only	0 ... 359.9999	Deg.
LNRAY, LNRBY, LNRCY	3pts LNR only	0 ... 100	%
LNR0, LNRAS, LNRBS, LNRCS	3pts LNR only	-17... 0 ... 17	%/Deg.
LNR0...LNR16	17pts LNR only	-50 ...+150	%
W	17pts LNR only	65.5 ... 360	Deg.
ANGLEOFSSLOPECOLD	Thermal Output Offset correction only	0..255	LSB In %/ Deg.C
ANGLEOFSSLOPEHOT	Thermal Output Offset correction only	0..255	LSB In %/ Deg.C

### 14.1.1. CLOCKWISE Parameter

The CLOCKWISE parameter defines the magnet rotation direction.

- CCW is defined by the 1-2-3-4 pin order direction for the Dual Mold Package.
- CW is defined by the reverse direction: 4-3-2-1 pin order direction for the Dual Mold Package.

Refer to the drawing in the sensitive spot positioning sections (Section 19.6).

### 14.1.2. Discontinuity Point (DP or Zero Degree Point)

The Discontinuity Point defines the 0Deg. point on the circle. The discontinuity point places the origin at any location of the trigonometric circle. The DP is used as reference for all the angular measurements.

Figure 7 - Discontinuity Point Positioning

### 14.1.3. 3-Pts LNR Parameters (for AxU-xxx option code only)

The LNR parameters, together with the clamping values, fully define the relation (the transfer function) between the digital angle and the output signal.

The shape of the MLX90366 transfer function from the digital angle value to the output voltage is described by the drawing below. Six segments can be programmed but the clamping levels are necessarily flat.

Two, three, or even five calibration points are then available, reducing the overall non-linearity of the IC by almost an order of magnitude each time. Three or five point calibration will be preferred by customers looking for excellent non-linearity figures. Two-point calibrations will be preferred by customers looking for a cheaper calibration set-up and shorter calibration time.

Figure 8 - 3-Pts LNR Parameters

#### 14.1.4. 17-Pts LNR Parameters (for AxV-xxx; ADS-xxx and AxX-xxx option codes)

The LNR parameters, together with the clamping values, fully define the relation (the transfer function) between the digital angle and the output signal.

The shape of the MLX90366 transfer function from the digital angle value to the output voltage is described by the drawing below. In the 17-Pts mode, the output transfer characteristic is Piece-Wise-Linear (PWL).

Figure 9 - Input range from 65.5Deg. up to 360Deg.

All the Y-coordinates can be programmed from -50% up to +150% to allow clamping in the middle of one segment (like on the Figure 9), but the output value is limited to CLAMPLOW and CLAMPHIGH values.

Between two consecutive points, the output characteristic is interpolated.

The parameter W determines the input range on which the 17 points (16 segments) are uniformly spread:

W	Range	$\Delta x$	W	Range	$\Delta x$
0 (0000b)	360.0Deg.	22.5Deg.	8	180.0Deg.	11.3Deg.
1	320.0Deg.	20.0Deg.	9	144.0Deg.	9.0Deg.
2	288.0Deg.	18.0Deg.	10	120.0Deg.	7.5Deg.
3	261.8Deg.	16.4Deg.	11	102.9Deg.	6.4Deg.
4	240.0Deg.	15.0Deg.	12	90.0Deg.	5.6Deg.
5	221.5Deg.	13.8Deg.	13	80.0Deg.	5.0Deg.
6	205.7Deg.	12.9Deg.	14	72.0Deg.	4.5Deg.
7	192.0Deg.	12.0Deg.	15 (1111b)	65.5Deg.	4.1Deg.

Outside of the selected range, the output will remain in clamping levels.

#### 14.1.5. CLAMPING Parameters

The clamping levels are two independent values to limit the output voltage range. The CLAMPLOW parameter adjusts the minimum output voltage level. The CLAMPHIGH parameter sets the maximum output voltage level. Both parameters have 16 bits of adjustment and are available for both LNR modes.

#### 14.1.6. Thermal Output Offset correction (for AxX-xxx option code only)

The two parameters ANGLEOFSSLOPEHOT and ANGLEOFSSLOPECOLD, defined in the section End-User programmable parameters see section 12, enable to add to the output, an offset depending on the measured temperature see the Figure 10.

Figure 10 - Input range from -40Deg.C up to 160 Deg.C

The thermal offset is added before the clamping (see section 14.1.5). The span of this offset is +5.62/-3.37% of the full output scale. The added thermal offset varies with temperature see the equation below and the thermal coefficient is defined separately before (used coefficient ANGLEOFSSLOPECOLD) and after 35Deg.C (used coefficient ANGLEOFSSLOPEHOT).

If temperature is higher than 35Deg.C then:

$$\text{output} \leq \text{output} - \Delta T * \text{ANGLEOFSSLOPEHOT}$$

If temperature is lower than 35 Deg.C then:

$$\text{output} \leq \text{output} - \Delta T * \text{ANGLEOFSSLOPECOLD}$$

Where output is the calculated output adjusted by the thermal correction offset  $\Delta T * \text{ANGLEOFSSLOPECOLD}$ . Where  $\Delta T$  is the difference between current temperature and reference temperature 35Deg.C. The output correction capability at hot and room (extreme temperature and maximum value of ANGLEOFSSLOPEHOT and ANGLEOFSSLOPECOLD) are given in the table below.

Parameter	min	typ	max	Unit
Output correction capability at 160Deg.C	5%	5.62%		of Full span
Output correction capability at -40Deg.C	-3.09%	-3.372%		of Full span

## 14.2. Identification

Parameter	Comments	Value
USERID1	For AxU-xxx and ADS-xxx versions only	0...65535
USERID2		0...65535
USERID3		0...65535

Identification number: 48 bits (3 words) freely useable by Customer for traceability purpose.

### 14.3. Lock (Not in ADS-xxx version)

The MEMLOCK write protects all the EEPROM parameters set by the Melexis and user. Once the lock is enabled, it is not possible to change the EEPROM values anymore.

Note that the MEMLOCK bits should be set by the solver function “MemLock”.

### 14.4. Sensor Front-End

Parameter	Value
MAPXYZ	0...3
SMISM	0...32768
K	0...32768
SELK	0 or 1
GAINMIN	0 ... 41
GAINMAX	0 ... 41
GAINSATURATION	0...1

#### 14.4.1. MAPXYZ

The MAPXYZ parameter defines which fields are used to calculate the angle. The different possibilities are described in the tables below.

This 2 bits value selects the first (B1) and second (B2) field components according the table below.

MAPXYZ	B1	B2	Angular
0 – 00b	X	Y	XY mode
1 – 01b	Zx	X	XZx mode
2 – 10b	Y	Zx	YZx mode

Note: MAPXYZ = 3 is not recommended.

#### 14.4.2. SMISM, K and SELK Parameters

##### (i) SMISM

When the mapping (B1=X, B2=Y) is selected, SMSIM defines the sensitivity mismatch factor that is applied on B1, B2; When another B1, B2 mapping is selected, this parameter is “don’t care”.

This parameter is trimmed at factory; Melexis strongly recommends TO NOT overwrite it for optimal performances.

(ii) K

When the mapping (B1=X, B2=Y) is **NOT** selected, K defines the sensitivity mismatch factor that is applied on B1 or B2 (according to parameter SELK – see below). When the mapping (B1=X, B2=Y) is selected, this parameter is “don’t care”.

This parameter is trimmed at factory for mapping (B1=Z, B2=X). Melexis recommends to fine trim it when a smaller linearity error (Le) is required and a different mapping than (B1=X, B2=Y) is selected.

(iii) SELK

When the mapping (B1=X, B2=Y) is **NOT** selected, SELK defines the component on which the sensitivity mismatch factor K (see above): SELK = 0 means B1 → k · B1 and SELK = 1 means B2 → k · B2.

### 14.4.3. GAINMIN and GAINMAX Parameters

GAINMIN and GAINMAX define the thresholds on the gain code outside which the fault “GAIN out of Spec.” is set;

If GAINSATURATION is set, then the virtual gain code is saturated at GAINMIN and GAINMAX, and no Diagnostic fault is set since the saturations applies before the diagnostic check.

## 14.5. Filter

Parameter	Value
FILTER	0...2

The MLX90366 features 2 FIR filter modes controlled with Filter = 1...2. Filter = 0 corresponds to no filtering. The transfer function is described below:

$$y_n = \frac{1}{\sum_{i=0}^j a_i} \sum_{i=0}^j a_i x_{n-i}$$

The filters characteristic is given in the following table:

Filter	0	1	2 (for AxU-xxx, AxV-xxx and AxX-xxx only)
J No	0	1	3
Type	Disable	Finite Impulse Response	
Coefficients ai	1	11	1111
Title	No filter	ExtraLight	Light
99% Response Time	1	2	4
Efficiency RMS (dB)	0	3.0	6.0

## 14.6. Diagnostic Features

It is recommended to enable the diagnostic features for safety critical applications.

Refer to Application\_note\_Diagnostic\_Behavior\_90366 for EE\_CRC\_Enable function description and for Diagnostic features which can be enabled by user.

## 14.7. EEPROM endurance

Although the EEPROM is used for Calibration Data Storage (similarly to an OTPROM), the MLX90366 embedded EEPROM is qualified to guarantee an endurance of minimum 1000 write cycles at 125°C for (engineering/calibration purpose).

## 15. Self Diagnostic

The MLX90366 provides numerous self-diagnostic features. Those features increase the robustness of the IC functionality as it will prevent the IC to provide erroneous output signal in case of internal or external failure modes (“fail-safe”).

Diagnostic Item	Action	Effect on Outputs	Type	Monitoring Rate	Reporting Rate
<b>Start-up phase Diagnostics</b>					
RAM March C-10N Test	Fail-safe mode ** ** CPU reset after 120ms	Diagnostic low/ high Reporting (optional)	Digi HW	n/applicable (start-up only)	n/applicable (start-up only)
Watchdog BIST	Fail-safe mode ** ** CPU reset after 120ms	Diagnostic low/ high Reporting (optional)	Digi HW	n/applicable (start-up only)	n/applicable (start-up only)
Under Voltage Monitoring <i>SUPPLYMONI = (MT3VB) OR (MT4VB)</i>	Start-up on Hold ** ** CPU reset after 120ms	Diagnostic low/high	Environ & Analog	n/applicable (start-up only)	n/applicable (start-up only)
Over Voltage Monitoring <i>MT7V</i>	PTC entry	Output in High-Impedance	Environ	n/applicable (start-up only)	n/applicable (start-up only)
<b>Back-Ground Loop Diagnostics</b>					
ROM 16bit checksum (continuous)	Fail-safe mode ** ** CPU reset after 120ms	Diagnostic low//high Reporting (optional)	Digi HW	800ms	800ms
EEPROM 8 bit CRC Check (continuous)	Fail-safe mode ** ** CPU reset after 120ms	Diagnostic low/high Reporting (optional)	Digi HW	10ms	10ms

Diagnostic Item	Action	Effect on Outputs	Type	Monitoring Rate	Reporting Rate
Watchdog ( continuous )	CPU reset	--	Digi HW	120ms	n/a
<b>DSP Loop Diagnostics</b>					
ADC Clipping ADCCLIP	Debouncing (programmable)	SENT Status bit0 = 1 (optional)	Environ & Analog	5/DSP	$\frac{6\text{ms} \times \text{Diag\_Debounce\_Thresh}}{\text{Diag\_Debounce\_Stepup}}$
Virtual Gain Code Out-of- spec GAINOOS	Debouncing (programmable)	SENT Status bit0 = 1 (optional)	Environ & Analog	1/DSP	$\frac{6\text{ms} \times \text{Diag\_Debounce\_Thresh}}{\text{Diag\_Debounce\_Stepup}}$
Virtual Gain Code Saturation [GAINMIN..GAINMAX]	Saturation (optional)	Gain Saturated @ GAINMIN-GAINMAX	Environ & Analog	n/applicable  Not a diagnostic	n/applicable  Not a diagnostic
ADC Monitor (Analog to Digital Converter) ADCMONI	Debouncing (programmable)	SENT Status bit0 = 1 (optional)	Analog HW	1/DSP	$\frac{6\text{ms} \times \text{Diag\_Debounce\_Thresh}}{\text{Diag\_Debounce\_Stepup}}$
Under Voltage Monitoring SUPPLYMONI = (MT3VB) OR (MT4VB)	Supply Debouncing (programmable)	SENT Status bit0 = 1 (optional)	Environ & Analog	1/DSP	$\frac{6\text{ms} \times \text{Diag\_Debounce\_Thresh}}{\text{Diag\_Debounce\_Stepup}}$
Over Voltage Monitoring MT7V	PTC entry after PTC Debouncing	Output in High- Impedance	Environ	2ms	2ms
Temperature Sensor Monitor TEMPMONI	Debouncing (programmable)	SENT Status bit0 = 1 (optional)	Analog	1/DSP	$\frac{6\text{ms} \times \text{Diag\_Debounce\_Thresh}}{\text{Diag\_Debounce\_Stepup}}$
Temperature > 170 Deg.C (± 20) Temperature < -60 Deg.C (± 20)	Saturate value used for the compensations to -40Deg.C and +150 Deg.C resp.	No effect	Environ & Analog		n/applicable  Not a diagnostic

**Hardware Diagnostics ( continuously checked by dedicated Logic )**

Diagnostic Item	Action	Effect on Outputs	Type	Monitoring Rate	Reporting Rate
Read/Write Access out of physical memory	Fail-safe mode ** ** CPU reset after 120ms	Diagnostic Low/High	Digi HW	n/a immediate Diag	n/a immediate Diagnostic
Write Access to protected area (IO and RAM Words)	Fail-safe mode ** ** CPU reset after 120ms	Diagnostic low/high	Digi HW	n/a immediate Diag.	n/a immediate Diagnostic
Unauthorized Mode Entry	Fail-safe mode ** ** CPU reset after 120ms	Diagnostic low/high	Digi HW	n/a immediate Diag	n/a immediate Diagnostic
EEPROM Error Correcting Code ( Hamming correction )	(Transparent) Error Correction	no effect	Digi HW	n/a.	n/a

#### Hardware Diagnostics ( continuously checked by dedicated Analog circuits )

Broken VSS	CPU Reset on recovery	Pull down load => Diagnostic High Pull up load => Diagnostic High	Environ	n/a immediate Diagnostic	n/a immediate Diagnostic
Broken VDD	CPU Reset on recovery	Pull down load => Diagnostic Low Pull up load => Diagnostic Low	Environ	n/a immediate Diagnostic	n/a immediate Diagnostic
Resistive Cable Test	Start-up on Hold	Diagnostic low/high	Environ	n/a immediate Diagnostic	n/a immediate Diagnostic.

## 16. Built-in Capacitors

Built-in capacitors are ceramic multilayer type X8R. The capacitors are specifically suited for high temperature applications with stable capacitance value (+/- 15%) up to 150 DegC.

Ordering Code	C1	C2	C3	C4
MLX90366LVS-Axx-25x	100nF	10nF	100nF	100nF
MLX90366LVS-Axx-46x	220nF	22nF	100nF	220nF

The capacitors are assembled using a gluing method instead of soldering to be more reliable towards thermal/mechanical stress. The maximum rated voltage for the capacitors is 50V.

## 17. Standard information regarding manufacturability of Melexis products with different soldering processes

Our products are classified and qualified regarding soldering technology, solderability and moisture sensitivity level according to standards in place in Semiconductor industry.

For further details about test method references and for compliance verification of selected soldering method for product integration, Melexis recommends reviewing on our web site the General Guidelines soldering recommendation (<http://www.melexis.com/en/quality-environment/soldering>).

For all soldering technologies deviating from the one mentioned in above document (regarding peak temperature, temperature gradient, temperature profile etc), additional classification and qualification tests have to be agreed upon with Melexis.

For package technology embedding trim and form post-delivery capability, Melexis recommends consulting the dedicated trim&forming recommendation application note: lead trimming and forming recommendations (<http://www.melexis.com/en/documents/documentation/application-notes/lead-trimming-and-forming-recommendations>).

Melexis is contributing to global environmental conservation by promoting lead free solutions. For more information on qualifications of RoHS compliant products (RoHS = European directive on the Restriction Of the use of certain Hazardous Substances) please visit the quality page on our website: <http://www.melexis.com/en/quality-environment>.

## 18. ESD Precautions

Electronic semiconductor products are sensitive to Electro Static Discharge (ESD).

Always observe Electro Static Discharge control procedures whenever handling semiconductor products.

## 19. Package Information

## 19.1. DMP-4 - Package Outline Dimensions (POD) – STD1 1.27

Figure 11 – DMP-4 information for STD1 1.27 MLX90366LVS-Axx-xx0

## 19.2. DMP-4 - Package Outline Dimensions (POD) – STD1 2.54

Figure 12 – DMP-4 Information for STD1 2.54 MLX90366LVS-Axx-xx1

### 19.3. DMP-4 - Package Outline Dimensions (POD) – STD2 2.54

Figure 13 – DMP-4 information for STD2 2.54 MLX90366LVS-Axx-xx3

## 19.4. DMP-4 - Package Outline Dimensions (POD) – STD4 2.54

Figure 14 – DMP-4 information for STD4 2.54 MLX90366LVS-Axx-xx8

## 19.5. DMP-4 - Pinout and Marking

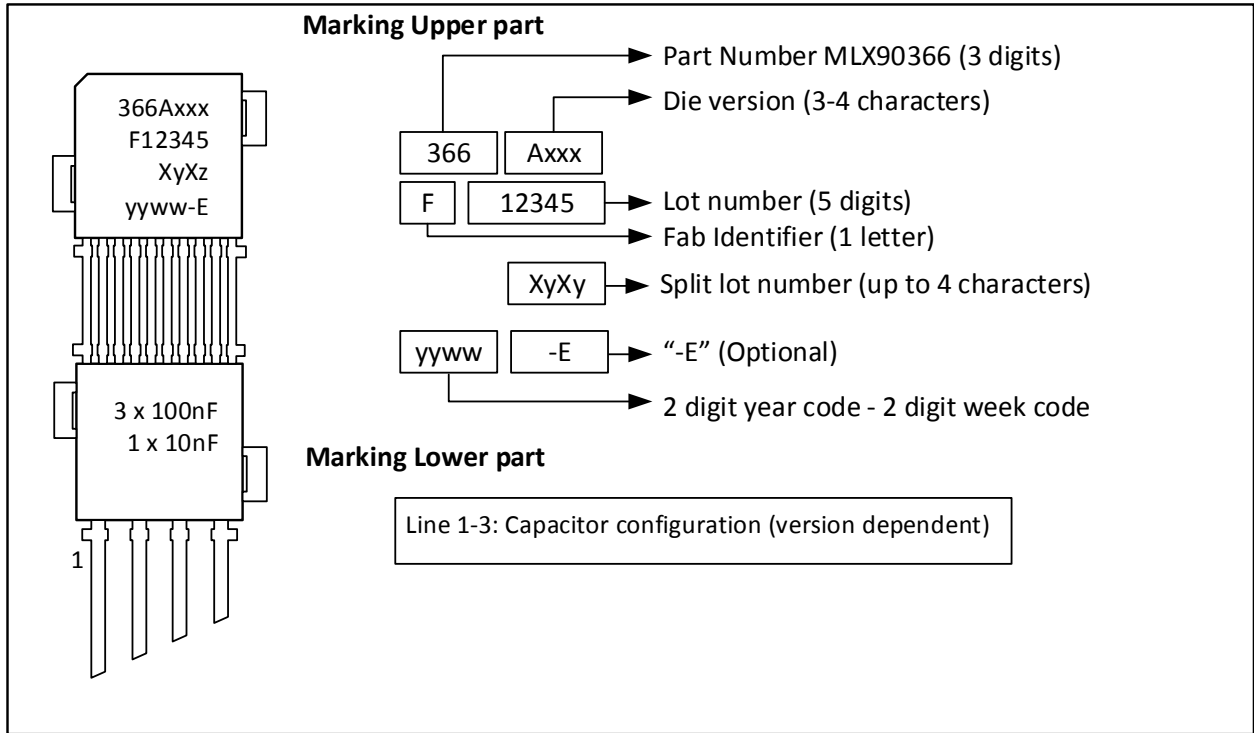

Figure 15 – DMP-4 marking and pinout convention

The pin order is indicated in sections 19.6 and 4.

## 19.6. DMP-4 - Sensitive Spot Positioning

Figure 16 – DMP-4 sensitive spot positioning

Magnetic center position	Position in mm
Xc	0.23
Yc	3.67
Zc	0.495

## 19.7. DMP-4 - Angle detection

*Figure 17 – DMP-4 angle detection*

The MLX90366 is an absolute angular position sensor. Note however that the linearity error (See section 8) does not include the error linked to the absolute reference 0 Deg., which can be fixed in the application through the discontinuity point.

## 20. Disclaimer

*The information furnished by Melexis herein ("Information") is believed to be correct and accurate. Melexis disclaims (i) any and all liability in connection with or arising out of the furnishing, performance or use of the technical data or use of the product(s) as described herein ("Product") (ii) any and all liability, including without limitation, special, consequential or incidental damages, and (iii) any and all warranties, express, statutory, implied, or by description, including warranties of fitness for particular purpose, non-infringement and merchantability. No obligation or liability shall arise or flow out of Melexis' rendering of technical or other services.*

*The Information is provided "as is" and Melexis reserves the right to change the Information at any time and without notice. Therefore, before placing orders and/or prior to designing the Product into a system, users or any third party should obtain the latest version of the relevant information to verify that the information being relied upon is current.*

*Users or any third party must further determine the suitability of the Product for its application, including the level of reliability required and determine whether it is fit for a particular purpose.*

*The Information is proprietary and/or confidential information of Melexis and the use thereof or anything described by the Information does not grant, explicitly or implicitly, to any party any patent rights, licenses, or any other intellectual property rights.*

*This document as well as the Product(s) may be subject to export control regulations. Please be aware that export might require a prior authorization from competent authorities.*

*The Product(s) are intended for use in normal commercial applications. Unless otherwise agreed upon in writing, the Product(s) are not designed, authorized or warranted to be suitable in applications requiring extended temperature range and/or unusual environmental requirements. High reliability applications, such as medical life-support or life-sustaining equipment are specifically not recommended by Melexis.*

*The Product(s) may not be used for the following applications subject to export control regulations: the development, production, processing, operation, maintenance, storage, recognition or proliferation of 1) chemical, biological or nuclear weapons, or for the development, production, maintenance or storage of missiles for such weapons; 2) civil firearms, including spare parts or ammunition for such arms; 3) defense related products, or other material for military use or for law enforcement; 4) any applications that, alone or in combination with other goods, substances or organisms could cause serious harm to persons or goods and that can be used as a means of violence in an armed conflict or any similar violent situation.*

*The Products sold by Melexis are subject to the terms and conditions as specified in the Terms of Sale, which can be found at <https://www.melexis.com/en/legal/terms-and-conditions>.*

*This document supersedes and replaces all prior information regarding the Product(s) and/or previous versions of this document.*

## 21. Contact

For the latest version of this document, go to our website at [www.melexis.com](http://www.melexis.com). For additional information, please contact our Direct Sales team and get help for your specific needs:

Europe, Africa	Telephone: +32 13 67 04 95 Email : <a href="mailto:sales_europe@melexis.com">sales_europe@melexis.com</a>
Americas	Telephone: +1 603 223 2362 Email : <a href="mailto:sales_usa@melexis.com">sales_usa@melexis.com</a>
Asia	Email : <a href="mailto:sales_asia@melexis.com">sales_asia@melexis.com</a>

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкуренспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
