# General Product Information

## Product Test Conditions

SignalSure 75 LEDs are tested and binned using a 20ms monopulse (MP) at 75mA drive current, junction temperature,  $T_j$ , of 25°C.

## Part Number Nomenclature

Part numbers for SignalSure 75 follow the convention below:

A 1 D P – **B C C C L D 7 E F G H 0 0**

Where:

- B** – designates color (A=Amber, O=Red Orange and S=Super Red)
- C C C** – designates minimum dominant wavelength (588=588nm, 612=612nm, 627=627nm and 632=632nm)
- D** – designates the binning condition (1=single binning (75mA), 8=dual binning (75mA and 5mA))
- E** – designates minimum flux bin (See Product Bin and Labeling section)
- F** – designates flux bin range (3=3 subsequent flux bins including the minimum bin)
- G H** – designates forward voltage range in which G is the minimum  $V_f$  bin and H is the maximum  $V_f$  bin (See Product Bin and Labeling Definitions section)

Therefore, the following part number is used for a SignalSure 75 Super Red, 632nm minimum wavelength, single binned at 75mA, luminous flux range of 5.1 lumens to 8.7 lumens and forward voltage range of 2.07 volts to 2.67 volts:

A 1 D P – **S 6 3 2 L 1 7 C 3 A E 0 0**

# Product Bin and Labeling Definitions

## Designing with SignalSure

Flux bins supportable for car programs depend on product color and program start- and end-of-production date. Flux roadmaps by year and product color are maintained and available from the sales representative. Please contact your local sales representative to request the flux bin range with best supportability for program timing.

## Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheets. For this reason, Lumileds bins the LED components for luminous flux, color and forward voltage.

SignalSure 75 single binned LEDs are labeled using a 3-digit alphanumeric CAT code following the format below:

### A B C

- A** – designates luminous flux bin at 75mA (example: B=4.3 lumens to 5.1 lumens)
- B** – designates color code (example: 3=612nm to 618nm)
- C** – designates forward voltage bin at 75mA (example: B=2.19V to 2.31V)

SignalSure 75 dual binned LEDs are labeled using a 5-digit CAT code following the format below:

### A b C D e

- A** – designates luminous flux bin at 75mA (example: B=4.3 lumens to 5.1 lumens)
- b** – designates luminous flux bin at 5mA (example: g=0.35 lumens to 0.42 lumens)
- C** – designates color code (example: 3=612nm to 618nm)
- D** – designates forward voltage bin at 75mA (example: B=2.19V to 2.31V)
- e** – designates forward voltage bin at 5mA (example: b=1.72V to 1.78V)
