Panasonic Global Part Number AN41919A-VB

Vendor Issue Number 1203028

Confirmation of Security Control

We confirm and certify that the products of these specifications shall not be supplied so as to be used for Military Purpose (defined herein below). "Military Purpose" in this statement means the design, development, manufacture, storage or use of any weapons, including without limitation nuclear weapons, biological weapons, chemical weapons and missiles.

Request for your special attention and precautions in using the technical information and semiconductors described in this book

(1) If any of the products or technical information described in this book is to be exported or provided to non-residents, the laws and regulations of the exporting country, especially, those with regard to security export control, must be observed.

(2) The technical information described in this book is intended only to show the main characteristics and application circuit examples of the products. No license is granted in and to any intellectual property right or other right owned by Panasonic Corporation or any other company. Therefore, no responsibility is assumed by our company as to the infringement upon any such right owned by any other company which may arise as a result of the use of technical information described in this book.

(3) The products described in this book are intended to be used for general applications (such as office equipment, communications equipment, measuring instruments and household appliances), or for specific applications as expressly stated in this book.

Consult our sales staff in advance for information on the following applications:

• Special applications (such as for airplanes, aerospace, automotive equipment, traffic signaling equipment, combustion equipment, life support systems and safety devices) in which exceptional quality and reliability are required, or if the failure or malfunction of the products may directly jeopardize life or harm the human body.

It is to be understood that our company shall not be held responsible for any damage incurred as a result of or in connection with your using the products described in this book for any special application, unless our company agrees to your using the products in this book for any special application.

(4) When designing your equipment, comply with the range of absolute maximum rating and the guaranteed operating conditions (operating power supply voltage and operating environment etc.). Especially, please be careful not to exceed the range of absolute maximum rating on the transient state, such as power-on, power-off and mode-switching. Other-wise, we will not be liable for any defect which may arise later in your equipment.

Even when the products are used within the guaranteed values, take into the consideration of incidence of break down and failure mode, possible to occur to semiconductor products. Measures on the systems such as redundant design, arresting the spread of fire or preventing glitch are recommended in order to prevent physical injury, fire, social damages, for example, by using the products.

(5) Comply with the instructions for use in order to prevent breakdown and characteristics change due to external factors (ESD, EOS, thermal stress and mechanical stress) at the time of handling, mounting or at customer's process. When using products for which damp-proof packing is required, satisfy the conditions, such as shelf life and the elapsed time since first opening the packages.

(6) This book may be not reprinted or reproduced whether wholly or partially, without the prior written permission of our company.

---

# AN41919A

## DC IRIS Control LSI for IP Camera and Network Camera

### ■ Overview

AN41919A is a DC IRIS control LSI for IP camera and security camera. It integrates digital PID control circuit and is able to control various IRIS motors.

### ■ Features

- Built-in DC IRIS controller
- DC IRIS control by 4-line serial data communication

### ■ Applications

- IP camera, security camera

### ■ Package

- 44 pin Plastic Quad Flat Non-leaded Package (QFN Type)

### ■ Type

- Bi-COMS IC

2010-12-03		
Established	Revised	

■ Application Circuit Example1 (Analog Luminance signal)

Notes) • This application circuit is an example. The operation of mass production set is not guaranteed. Perform enough evaluation and verification on the design of mass production set.

2010-12-03		
Established	Revised	

■ Application Circuit Example2 (continued) (PWM signal)

Notes) • This application circuit is an example. The operation of mass production set is not guaranteed. Perform enough evaluation and verification on the design of mass production set.

### ■ Pin Descriptions

Pin No.	Pin name	Type	Description
1	N. C.	—	N. C.
2	VREF	Output	Reference voltage for damping coil signal amplifier
3	CREF	—	(AVDD3)/2 capacitor connection pin
4	AVDD3	Power supply	3 V analog power supply
5	ADCIN	Input	ADC test input
6	TESTOUT	Output	Test output
7	AMPINP	Input	Damping coil signal amplifier non-inverting input
8	AMPINN	Input	Damping coil signal amplifier inverting input
9	AMPOUT	Output	Damping coil signal amplifier output
10	N. C.	—	N. C.
11	N. C.	—	N. C.
12	N. C.	—	N. C.
13	DRV_OUT1	Output	Motor output 1
14	GND5	Ground	GND for motor
15	VDD5	Power supply	Power supply for motor
16	DRV_OUT2	Output	Motor output 2
17	N. C.	—	N. C.
18	SOUT	Output	Serial data output
19	CS	Input	Chip select signal input
20	SCK	Input	Serial clock input
21	SIN	Input	Serial data input
22	N. C.	—	N. C.
23	N. C.	—	N. C.
24	OSCIN	Input	System clock input
25	VD_IN	Input	IRIS video sync signal input
26	DVDD	Power supply	3 V digital power supply
27	MONI_1	Output	Monitor output 1
28	GNDD	Ground	Digital GND
29	MONI_2	Output	Monitor output 2
30	RST	Input	Reset signal input
31	ENABLE	Input	Enable signal input
32	N. C.	—	N. C.

### ■ Absolute Maximum Ratings

Note) Absolute maximum ratings are limit values which do not result in damages to this IC, and IC operation is not guaranteed at these limit values.

A No.	Parameter	Symbol	Rating	Unit	Notes
1	Controller supply voltage	AVDD3	-0.3 to +4.0	V	*1
		DVDD	-0.3 to +4.0		
2	Supply voltage for motor controller	VDD5	-0.3 to +6.0	V	*1
3	Power dissipation	P <sub>D</sub>	141.4	mW	*2
4	Operating ambient temperature	T <sub>opr</sub>	-20 to +85	°C	*3
5	Storage temperature	T <sub>stg</sub>	-55 to +125	°C	*3
6	Motor driver H bridge drive current	I <sub>M</sub>	±0.15	A/ch	—
7	Digital input voltage	V <sub>in</sub>	-0.3 to (DVDD + 0.3)	V	*4

Notes) \*1 : The values under the condition not exceeding the above absolute maximum ratings and the power dissipation.

\*2 : The power dissipation shown is the value at T<sub>a</sub> = 85°C for the independent (unmounted) IC package without a heat sink.

When using this IC, refer to the P<sub>D</sub>-T<sub>a</sub> diagram of the package standard and design the heat radiation with sufficient margin so that the allowable value might not be exceeded based on the conditions of power supply voltage, load, and ambient temperature.

\*3 : Except for the power dissipation, operating ambient temperature, and storage temperature, all ratings are for T<sub>a</sub> = 25°C.

\*4 : (DVDD + 0.3 ) V must not be exceeded 4.0 V.

■ Operating Supply Voltage Range

Parameter	Symbol	Range			Unit	Notes
		Min	Typ	Max		
Supply voltage range	AVDD3	2.7	3.1	3.6	V	*1
	DVDD	2.7	3.1	3.6		
	VDD5	3.0	4.8	5.5		

Note) \*1 : The values under the condition not exceeding the above absolute maximum ratings and the power dissipation.

### ■ Allowable Current and Voltage Range

- Notes)
- Allowable current and voltage ranges are limit ranges which do not result in damages to this IC, and IC operation is not guaranteed within these limit ranges.
  - Voltage values, unless otherwise specified, are with respect to GND.  
GND is voltage for GNDA, GNDD, and GND5. GND = GNDA = GNDD = GND5
  - VCC3V is voltage for AVDD3 and DVDD. AVDD3 = DVDD
  - Do not apply external currents or voltages to any pin not specifically mentioned.
  - For the circuit currents, "+" denotes current flowing into the IC, and "-" denotes current flowing out of the IC.

Pin No.	Pin name	Rating	Unit	Notes
5	ADCIN	-0.3 to (AVDD3 + 0.3)	V	*1
7	AMPINP	-0.3 to (AVDD3 + 0.3)	V	*1
8	AMPINN	-0.3 to (AVDD3 + 0.3)	V	*1
19	CS	-0.3 to (DVDD + 0.3)	V	*1
20	SCK	-0.3 to (DVDD + 0.3)	V	*1
21	SIN	-0.3 to (DVDD + 0.3)	V	*1
24	OSCIN	-0.3 to (DVDD + 0.3)	V	*1
25	VD_IN	-0.3 to (DVDD + 0.3)	V	*1
30	RST	-0.3 to (DVDD + 0.3)	V	*1
31	ENABLE	-0.3 to (DVDD + 0.3)	V	*1
36	CLK_SW	-0.3 to (DVDD + 0.3)	V	*1
37	TEST	-0.3 to (DVDD + 0.3)	V	*1
40	AMP2INP	-0.3 to (AVDD3 + 0.3)	V	*1
43	PWM_IN	-0.3 to (DVDD + 0.3)	V	*1

Pin No.	Pin name	Rating	Unit	Notes
13	DRV_OUT1	±0.15	A	—
16	DRV_OUT2	±0.15	A	—

Note) \*1 : (AVDD3 + 0.3) V must not be exceeded 4.0 V, and (DVDD + 0.3) V must not be exceeded 4.0 V.

### ■ Usage Notes

#### • Special attention and precaution in using

1. This IC is intended to be used for general electronic equipment [IP camera and network camera].

Consult our sales staff in advance for information on the following applications:

- Special applications in which exceptional quality and reliability are required, or if the failure or malfunction of this IC may directly jeopardize life or harm the human body.
- Any applications other than the standard applications intended.
  - (1) Space appliance (such as artificial satellite, and rocket)
  - (2) Traffic control equipment (such as for automobile, airplane, train, and ship)
  - (3) Medical equipment for life support
  - (4) Submarine transponder
  - (5) Control equipment for power plant
  - (6) Disaster prevention and security device
  - (7) Weapon
  - (8) Others : Applications of which reliability equivalent to (1) to (7) is required

It is to be understood that our company shall not be held responsible for any damage incurred as a result of or in connection with your using the IC described in this book for any special application, unless our company agrees to your using the IC in this book for any special application.

2. Pay attention to the direction of LSI. When mounting it in the wrong direction onto the PCB (printed-circuit-board), it might smoke or ignite.
3. Pay attention in the PCB (printed-circuit-board) pattern layout in order to prevent damage due to short circuit between pins. In addition, refer to the Pin Description for the pin configuration.
4. Perform a visual inspection on the PCB before applying power, otherwise damage might happen due to problems such as a solder-bridge between the pins of the semiconductor device. Also, perform a full technical verification on the assembly quality, because the same damage possibly can happen due to conductive substances, such as solder ball, that adhere to the LSI during transportation.
5. Take notice in the use of this product that it might break or occasionally smoke when an abnormal state occurs such as output pin- $V_{CC}$  short (Power supply fault), output pin-GND short (Ground fault), or output-to-output-pin short (load short) .  
And, safety measures such as an installation of fuses are recommended because the extent of the above-mentioned damage and smoke emission will depend on the current capability of the power supply.
6. When designing your equipment, comply with the range of absolute maximum rating and the guaranteed operating conditions (operating power supply voltage and operating environment etc.). Especially, please be careful not to exceed the range of absolute maximum rating on the transient state, such as power-on, power-off and mode-switching. Otherwise, we will not be liable for any defect which may arise later in your equipment.  
Even when the products are used within the guaranteed values, take into the consideration of incidence of break down and failure mode, possible to occur to semiconductor products. Measures on the systems such as redundant design, arresting the spread of fire or preventing glitch are recommended in order to prevent physical injury, fire, social damages, for example, by using the products.
7. When using the LSI for new models, verify the safety including the long-term reliability for each product.
8. When the application system is designed by using this LSI, be sure to confirm notes in this book.  
Be sure to read the notes to descriptions and the usage notes in the book.

### ■ Usage Notes (continued)

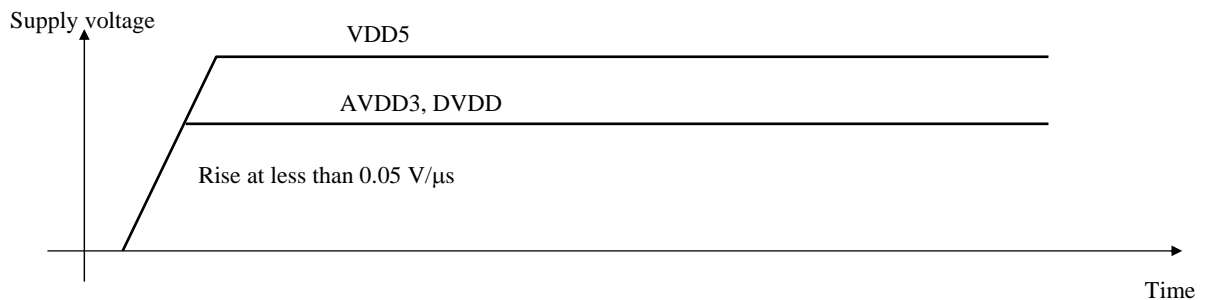

#### • Notes of Power LSI

1. The protection circuit is for maintaining safety against abnormal operation. Therefore, the protection circuit should not work during normal operation.  
Especially for the thermal protection circuit, if the area of safe operation or the absolute maximum rating is momentarily exceeded due to output pin to  $V_{CC}$  short (Power supply fault), or output pin to GND short (Ground fault), the LSI might be damaged before the thermal protection circuit could operate.
2. Unless specified in the product specifications, make sure that negative voltage or excessive voltage are not applied to the pins because the device might be damaged, which could happen due to negative voltage or excessive voltage generated during the ON and OFF timing when the inductive load of a motor coil or actuator coils of optical pick-up is being driven.
3. The product which has specified ASO (Area of Safe Operation) should be operated in ASO.
4. Verify the risks which might be caused by the malfunctions of external components.
5. Apply voltage from a low-impedance to power supply pins and connect a bypass capacitor to the LSI as near as possible.

#### • Notes for this LSI

##### Power-on and Supply voltage

When supplying to AVDD3 (Pin 4), VDD5 (Pin 15), and DVDD (Pin 26), or raising supply voltage for these pins, set the rising speed of supply voltage to less than  $0.05 \text{ V}/\mu\text{s}$ . AVDD3, VDD5, and DVDD can be powered on in any sequence.

##### Connections to VREF and CREF

To VREF (Pin 2), do not connect other than recommended capacitor and damp coil.

To CREF (Pin 3), do not connect other than recommended capacitor.

## 5. Power Dissipation (Supplementary Explanation)

### [Experiment environment]

Power Dissipation (Technical Report) is a result in the experiment environment of SEMI standard conformity. (Ambient air temperature (Ta) is 25 degrees C)

### [Supplementary information of PWB to be used for measurement]

The supplement of PWB information for Power Dissipation data (Technical Report) are shown below.

Indication	Total Layer	Resin Material
Glass-Epoxy	1-layer	FR-4
4-layer	4-layer	FR-4

### [Notes about Power Dissipation (Thermal Resistance) ]

Power Dissipation values (Thermal Resistance) depend on the conditions of the surroundings, such as specification of PWB and a mounting condition, and a ambient temperature. (Power Dissipation (Thermal Resistance) is not a fixed value.)

The Power Dissipation value (Technical Report) is the experiment result in specific conditions (evaluation environment of SEMI standard conformity), and keep in mind that Power Dissipation values (Thermal resistance) depend on circumference conditions and also change.

### [Definition of each temperature and thermal resistance]

Ta : Ambient air temperature

The temperature of the air is defined at the position where the convection, radiation, etc. don't affect the temperature value, and it's separated from the heating elements.

Tc : It's the temperature near the center of a package surface. The package surface is defined at the opposite side if the PWB.

Tj : Semiconductor element surface temperature (Junction temperature.)

Rth(j-c) : The thermal resistance (difference of temperature of per 1 Watts) between a semiconductor element junction part and the package surface

Rth(c-a) : The thermal resistance (difference of temperature of per 1 Watts) between the package surface and the ambient air

Rth(j-a) : The thermal resistance (difference of temperature of per 1 Watts) between a semiconductor element junction part and the ambient air

Fig1. Definition image

### [Definition formula]

$$T_j = \{R_{th}(j-c) + R_{th}(c-a)\} \times P + T_a$$

$$= R_{th}(j-a) \times P + T_a$$

$$R_{th}(j-c) = \frac{T_j - T_c}{P} \quad ( \text{ } / \text{W} )$$

$$R_{th}(c-a) = \frac{T_c - T_a}{P} \quad ( \text{ } / \text{W} )$$

$$R_{th}(j-a) = \frac{T_j - T_a}{P} \quad ( \text{ } / \text{W} )$$

$$= R_{th}(j-c) + R_{th}(c-a)$$

	<b>Recommended Soldering Conditions</b>		
		Total pages	page
		2	1

**Product name : AN41919A-VB**

**Package : \*QFN044-P-0606D**

## 1. Recommended Soldering Conditions

In case that the semiconductor packages are mounted on the PCB, the soldering should be performed under the following conditions.

### ① Reflow soldering

**Reflow peak temp. : max. 260 °C**

No.	mark	contents	value
1	T1	Pre-heating temp.	150 °C~180 °C
2	t1	Pre-heating temp. hold time	60 s~120 s
3	a	Rising rate	2 °C/s~5 °C/s
4	Tp	Peak temp.	255 °C+5 °C, -0 °C
5	tp	Peak temp. hold time	10 s±3 s
6	tw	High temp. region hold time	within 60 s (≥220 °C)
7	b	Down rate	2 °C/s~5 °C/s
8	-	Number of reflow	within 2 times

\* Peak temperature : less than 260 °C

\* Temperature is measured at package surface point

No. 11-182

2012/3/7		
Prepared	Revised	

	Recommended Soldering Conditions		Total pages	page
			2	2

## 2. Storage environment after dry pack opening

- ※ Because the taping and the magazine materials are not the heat-resistant materials, the bake at 125°C cannot be done.  
Therefore, please solder everything or control everything in the rule time.  
Please keep them in an equal environment with the moisture-proof packaging or dry box.  
(Temperature: room temperature, relative humidity: 30% or less. )  
To control storage time, when bake in the taping and the magazine is necessary, it is necessary for each type to set a bake condition. Please inquire of our company.

☆ AN41919A-VB limitation, low temperature bake condition : 40 °C / 25 %RH or less / 192 h

## 3. Note

- ① Storage environment conditions: keep the following conditions Ta=5 °C~30 °C, RH=30 %~70 %.
- ② Storage period before opening dry pack shall be 1year from a shipping day under Ta=5 °C~30 °C, RH=30 %~70 %.
- ③ Baking cycle should be only one time. Please be cautious of solderability at baking.
- ④ Reflow soldering : max. two times. (1st reflow must be finished within 336 hours.)
- ⑤ Remove flux sufficiently from product in the washing process.  
( Flux : Chlorineless rosin flux is recommended.)
- ⑥ In case that use ultrasonic for product washing,  
There is the possibility that the resonance may occur due to the frequency and shape of PCB.  
It may be affected to the strength of lead. Please be cautious of this matter.

# **Panasonic**

**Industrial Devices Company, Panasonic Corporation**

1 Kotari-yakemachi, Nagaokakyo City, Kyoto 617-8520, Japan  
Tel:075-951-8151

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
