

High Sensitivity Micropower Omnipolar Hall-Effect Switch**AH9247****General Description**

The AH9247 is an ultra-sensitive Hall-effect switch with digital latched output, mainly designed for battery-operation, handheld equipments.

Special CMOS process is used for low-voltage and low-power requirement. A chopper stabilized amplifier improves stability of magnetic switch points. A sleep-awake logic controls the IC in sleep time or awake time. This function will reduce the average operating current of the IC. During the awake time, the output is changed with the magnetic flux density. During the sleep time, the output is latched in its previous state and the current consumption will reduce to some μA .

The IC switching behaviour is omnipolar, either north or south pole sufficient strength will turn the output on. If the magnetic flux density is larger than operating point (B_{OP}), the output will be turned on; if it is less than releasing point (B_{RP}), the output will be turned off.

The AH9247 is available in TO-92S-3, SOT-23-3 and DFN-2 $\times$ 2-3 packages which are optimized for most applications.

Features

- Micropower Operation
- 2.5 to 5.5V Power Supply
- Switching for Both Poles of a Magnet (Omnipolar)
- Stabilized Chopper
- Superior Temperature Stability
- Digital Output Signal
- Built-in Pull-up Resistor
- ESD (HBM) 6000V

Applications

- Cover Switch in Notebook PC/PDA
- Handheld Wireless Application Awake Switch
- Magnet Switch in Low Duty Cycle Applications

AH9247

Pin Configuration

Figure 2. Pin Configuration of AH9247

Pin Description

Pin Number			Pin Name	Function
TO-92S-3	SOT-23-3	DFN-2x2-3		
1	1	1	VCC	Power supply pin
2	3	3	GND	Ground pin
3	2	2	OUTPUT	Output pin

Figure 3. Functional Block Diagram of AH9247

Ordering Information

Package	Temperature Range	Part Number	Marking ID	Packing Type
TO-92S-3	-40 to 85°C	AH9247Z3TR-G1	9247	Ammo
SOT-23-3		AH9247NTR-G1	GX8	Tape & Reel
DFN-2×2-3		AH9247DNTR-G1	JF	Tape & Reel

BCD Semiconductor's Pb-free products, as designated with "G1" suffix in the part number, are RoHS compliant and green.

**High Sensitivity Micropower Omnipolar Hall-Effect Switch****AH9247****Absolute Maximum Ratings ($T_A=25^{\circ}\text{C}$, Note 1)**

Parameter	Symbol	Value		Unit
Supply Voltage	V_{CC}	7		V
Supply Current (Fault)	I_{CC}	6		mA
Output Voltage	V_{OUT}	7		V
Output Current	I_{OUT}	2		mA
Magnetic Flux Density	B	Unlimited		Gauss
Power Dissipation	P_D	TO-92S-3	400	mW
		SOT-23-3	230	
		DFN-2×2-3	230	
Storage Temperature	T_{STG}	-55 to 150		$^{\circ}\text{C}$
Junction Temperature	T_J	150		$^{\circ}\text{C}$
ESD (Human Body Model) (Note 2)		6000		V
ESD (Machine Model) (Note 2)		400		V

Note 1: Stresses greater than those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “Recommended Operating Conditions” is not implied. Exposure to “Absolute Maximum Ratings” for extended periods may affect device reliability.

Note 2: Electronic semiconductor products are sensitive to Electro Static Discharge (ESD). Always observe Electro Static Discharge control procedures whenever handling semiconductor products.

Recommended Operating Conditions

Parameter	Symbol	Min	Max	Unit
Supply Voltage	V_{CC}	2.5	5.5	V
Operating Temperature	T_{OP}	-40	85	$^{\circ}\text{C}$

**High Sensitivity Micropower Omnipolar Hall-Effect Switch****AH9247****Electrical Characteristics** $V_{CC}=3V$, $T_A=25^{\circ}C$, unless otherwise specified.

Parameter	Symbol	Conditions	Min	Typ	Max	Units
Supply Voltage	V_{CC}	Operating	2.5	3	5.5	V
Supply Current	I_{AW}	Awake		1.8	3	mA
	I_{SL}	Sleep		4	10	μA
	I_{AVG}	Average		8	15	μA
Output Current	I_{OUT}				1.0	mA
Saturation Voltage	V_{SAT}	$I_{OUT}=1.0mA$			0.4	V
Awake Mode Time	t_{AW}	Operating		120		μs
Sleep Mode Time	t_{SL}	Operating		80	120	ms
Duty Cycle	D			0.15		%
Chopper Frequency	f_C			15		kHz

Magnetic Characteristics (Note 3) $V_{CC}=3V$, $T_A=25^{\circ}C$, unless otherwise specified.

For TO-92S-3 Package

Parameter	Symbol	Conditions	Min	Typ	Max	Unit
Operating Point	B_{OPS}	South pole to branded side $B > B_{OPS}, V_{OUT} = \text{low}(\text{output on})$	15	30	55	Gauss
	B_{OPN}	North pole to branded side $B > B_{OPN}, V_{OUT} = \text{low}(\text{output on})$	-55	-30	-15	Gauss
Releasing Point	B_{RPS}	South pole to branded side $B < B_{RPS}, V_{OUT} = \text{high}(\text{output off})$	5	20	45	Gauss
	B_{RPN}	North pole to branded side $B < B_{RPN}, V_{OUT} = \text{high}(\text{output off})$	-45	-20	-5	Gauss
Hysteresis	B_{HYS}	$ B_{OPX} - B_{RPX} $ (Note4)		10		Gauss

**High Sensitivity Micropower Omnipolar Hall-Effect Switch****AH9247****Magnetic Characteristics (Note 3) (Continued)**

$V_{CC}=3V$, $T_A=25^{\circ}C$, unless otherwise specified.

For SOT-23-3 and DFN-2×2-3 Packages

Parameter	Symbol	Conditions	Min	Typ	Max	Unit
Operating Point	B_{OPS}	South pole to branded side $B > B_{OPS}$, $V_{OUT} = \text{low (output on)}$	20	30	40	Gauss
	B_{OPN}	North pole to branded side $B > B_{OPN}$, $V_{OUT} = \text{low (output on)}$	-40	-30	-20	Gauss
Releasing Point	B_{RPS}	South pole to branded side $B < B_{RPS}$, $V_{OUT} = \text{high (output off)}$	5	20	32	Gauss
	B_{RPN}	North pole to branded side $B < B_{RPN}$, $V_{OUT} = \text{high (output off)}$	-32	-20	-5	Gauss
Hysteresis	B_{HYS}	$ B_{OPX} - B_{RPX} $ (Note4)		10		Gauss

Note 3: The specifications stated here are guaranteed by design. 1 Gauss=0.1mT

Note 4: B_{OPX} =operating point (output turns on); B_{RPX} =releasing point (output turns off)

Test Conditions

Figure 5. Average Supply Current (Note 5, Note 6)

Note 5: I_{CC} represents the average supply current. OUTPUT is open during measurement.

Note 6: The device is put under magnetic field with $B < B_{RP}$.

Figure 6. Output Saturation Voltage (Note 7, Note 8)

Note 7: The output saturation voltage V_{SAT} is measured at $V_{CC}=2.5V$ and $V_{CC}=5.5V$

Note 8: The device is put under magnetic field with $B > B_{OP}$

Test Conditions (Continued)

Figure 7. Magnetic Thresholds (Note 9, Note10)

Note 9: B_{OP} is determined by putting the device under magnetic field swept from $B_{RP(min)}$ to $B_{OP(max)}$ until the output is switched on.

Note 10: B_{RP} is determined by putting the device under magnetic field swept from $B_{OP(max)}$ to $B_{RP(min)}$ until the output is switched off.

High Sensitivity Micropower Omnipolar Hall-Effect Switch**AH9247****Typical Application (Continued)**

Figure 16. AH9247 Layout Pattern Mechanical Dimensions (Unit: mm)

Note 11:

The AH9247 is an ultra-sensitive Hall-effect switch with digital latched output. It is very sensitive for the magnetic field. As a result, extreme care is required with respect to the pattern layout when designing application circuits. (Figure 15. is a typical application reference, Figure 16. is AH9247 layout pattern mechanical dimensions.)

***1. Ground and VCC Wiring Layout**

Insert a capacitor (recommended value: 10nF or larger) as near as possible to the space between the VCC pin and GND pin.

***2. Positioning the External Components**

The external components such as C2 (recommended

value: 100pF) that are connected to ground must be connected with lines that are as short as possible. External components connected between IC pins must be placed as near to the pins as possible.

***3. Pad Layout Around Hall Switch**

Place some large current lines and some elements that have magnetism, such as speaker and DC Fan, as far to the Hall switch as possible.

***4. GND Pattern**

If possible, GND pattern is as large as possible so that the power dissipation from the NB inner case or solder machine can dissipate quickly.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
