

UNI/O™ Serial EEPROMs
Single I/O Bus Interface

UNI/O™ Serial EEPROM

One I/O

Introducing the UNI/O EEPROM Family

Need more microcontroller pins for new features?
Want to stay with a low pin-count microcontroller rather than switching to a more expensive one?

Microchip's new UNI/O serial EEPROM uses only ONE connection to the host microcontroller. This compares to two or three pins for I²C™, and three to six pins for Microwire or SPI buses. This new, proprietary bus offers advanced features like a status register and write protection on demand, along with all I/O, memory array and command functions through a single pin.

New Communications Standard

UNI/O bus: First introduced on serial EEPROMs

- Manchester Communications
 - Clock and data in a single serial bit stream
 - Signal transition in the middle of bit period
- MCU establishes data rate
- EEPROM tracks data rate – Frequency and Phase
- Software Addressable

Benefits

A single I/O EEPROM can simplify your design and reduce system cost

- Free up pins on the MCU
 - Add a new feature to your application
 - Move to a smaller MCU
- Free up pins on your connector
 - Smaller connector = lower cost
- More compact design

Advanced Features

- Single I/O Interface
- 1-16 Kbit Memory Densities
- 1.8-5.5V Operating Voltage
- 10-100 KHz Operating Frequency
- 1 Million Erase/Write Cycles
- Software Write Protect
 - ¼, ½ or Full Array
- Status Register
- Set/Erase entire memory with a single command
- ESD Protection > 4 KV
- Noise Filtration Circuitry
- Packaging: 3-pin SOT-23
8-pin SOIC, MSOP & TDFN
- Temperature: Industrial (-40°C to +85°C)
Extended (-40°C to +125°C)
