FEATURES of
LIQUID CRYSTAL DISPLAY MODULE
MODEL NO.: NMTC-S0802XRYHS-13

Character Type Dot Matrix LCD Module

Easy interface of 4 – bit or 8 – bit

Display character pattern: 5 × 7 font with cursor (208 kinds)

The special character pattern can be programmable by Character Generator RAM directly.

A customer character pattern can be programmable by mask option.

Automatically power on reset.

Internal Memory:

- Character Generator ROM (CGROM): 10,080 bits (204 characters × 5 × 8 dot)
- Character Generator RAM (CGRAM): 64 × 8 bits (8 characters × 5 × 8 dot)

Low power operation:

- Power supply voltage range: 2.7 ~ 5.5 V (V_{DD})
- LCD drive voltage range: 3.0 ~ 13.0 V (V_{DD} – V_O)

Low power consumption

CMOS process

Duty – cycle: 1/16

TO BE VERY CAREFUL !

The LCD driver ICs are made of CMOS process, which is very easy to be damaged by static charge, make sure the user is grounded when handling the LCM.

GENERAL SPECIFICATION

| Item | Content |
|--------------------------|------------------------------------|
| Display Resolution | 8 Characters × 2 lines |
| Dimensional Outline (mm) | 58.0 (W) × 32.0 (H) × 18.0 max (D) |
| Display mode | Reflective / Positive Type |
| Circuit | Controller IC, Segment – driver IC |
| Interface | Data (DB0~DB7), RS, R/W, E |

ABSOLUTE MAXIMUM RATING

(1) Electrical Absolute Ratings

| Item | Symbol | Min. | Max. | Unit | Note |
|------------------------------------|-------------------|------|----------------|------|------|
| Power Supply for Logic | $V_{DD} - V_{SS}$ | -0.3 | 7.0 | Volt | -- |
| Power Supply for LCD | $V_{DD} - V_O$ | 0 | 15.0 | Volt | -- |
| Input Voltage | V_{IN} | -0.3 | $V_{DD} + 0.3$ | Volt | -- |
| Supplier current for LED backlight | I_{LED} | -- | 140 | mA | -- |

Note: Operator should be grounded during handling LCM.

(2) Environmental Absolute Maximum Ratings

| Item | Normal Temperature | | | | Wide Temperature | | | |
|---------------------------------|--------------------|-------|-----------|-------|------------------|-------|-----------|-------|
| | Operating | | Storage | | Operating | | Storage | |
| | Max. | Min. | Max. | Min. | Max. | Min. | Max. | Min. |
| Ambient Temperature | 0°C | +50°C | -20°C | +70°C | -20°C | +70°C | -30°C | +80°C |
| Humidity (without condensation) | Note 2, 4 | | Note 3, 5 | | Note 4, 5 | | Note 4, 6 | |

Note 2: $T_a \leq 50^\circ\text{C}$: 80% RH max

$T_a > 50^\circ\text{C}$: Absolute humidity must be lower than the humidity of 85% RH at 50°C

Note 3: T_a at -20°C will be < 48hrs at 70°C will be < 120hrs

Note 4: Background color changes slightly depending on ambient temperature. This phenomenon is reversible.

Note 5: $T_a \leq 70^\circ\text{C}$: 75RH max

$T_a > 70^\circ\text{C}$: absolute humidity must be lower than the humidity of 75% RH at 70°C

Note 6: T_a at -30°C will be < 48hrs, at 80°C will be < 120hrs

COMMANDS DESCRIPTION

Clear Display

| RS | R/W | DB7 | DB6 | DB5 | DB4 | DB3 | DB2 | DB1 | DB0 |
|----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 |

Clear all the display data by writing "20H" (space code) to all DDRAM address, and set DDRAM address to "00H"

into AC (address counter). Return cursor to the original status. namely, bring the cursor to the left edge on first line of the display. Make entry mode increment (I/D = "1").

Return Home

| RS | R/W | DB7 | DB6 | DB5 | DB4 | DB3 | DB2 | DB1 | DB0 |
|----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 | * |

Return Home is cursor return home instruction. Set DDRAM address to "00H" into the address counter. Return

cursor to its original site and return display to its original status, if shifted. Content of DDRAM is not changed.

Entry Mode Set

| RS | R/W | DB7 | DB6 | DB5 | DB4 | DB3 | DB2 | DB1 | DB0 |
|----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 | I/D | SH |

Set the moving direction of cursor and display.

I/D: Increment / decrement of DDRAM address (cursor or blink)

When I/D = "High", cursor/blink moves to right and DDRAM address is increased by 1.

When I/D = "Low", cursor/blink moves to left and DDRAM address is decreased by 1.

* CGRAM operates the same as DDRAM, when read from or write to CGRAM.

SH: Shift of entire display

When DDRAM read (CGRAM read/write) operation or SH = "Low", shift of entire display is not performed.

If SH = "High" and DDRAM write operation, shift of entire display is performed according to I/D value (I/D =

"1", shift left, I/D = "0": shift right).

| | | | | | |
|-----------------------|-------|--------------------|----------|----------------|---------|
| Messrs. | | | | | |
| Product Specification | Model | NMTC-S0802XRYHS-13 | Rev. No. | Issued Date. | Page. |
| | | | A | August. 16, 17 | 17 / 29 |

Display ON/OFF Control

| RS | R/W | DB7 | DB6 | DB5 | DB4 | DB3 | DB2 | DB1 | DB0 |
|----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| 0 | 0 | 0 | 0 | 0 | 0 | 1 | D | C | B |

Control display / cursor/blink ON/OFF 1 bit register.

D: Display ON/OFF control bit

When D = "High", entire display is turned on.

When D = "Low", display is turned off, but display data is remained in DDRAM.

C: Cursor ON/OFF control bit

When C = "High", cursor is turned on.

When C = "Low", cursor is disappeared in current display, but I/D register remains its data.

B: Cursor Blink ON/OFF control bit

When B = "High", cursor blink is on, that performs alternate between all the high data and display character at the cursor position.

When B = "Low", blink is off.

Cursor or Display Shift

| RS | R/W | DB7 | DB6 | DB5 | DB4 | DB3 | DB2 | DB1 | DB0 |
|----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| 0 | 0 | 0 | 0 | 0 | 1 | S/C | R/L | * | * |

Without writing or reading of display data, shift right / left cursor position or display.

This instruction is used to correct or search display data. (Refer to Table 4)

During 2 – line mode display, cursor moves to the 2nd line after 40th digit of 1st line.

Note that display shift is performed simultaneously in all the line.

When displayed data is shifted repeatedly, each line shifted individually.

When display shift is performed, the contents of address counter are not changed.

| S/C | R/L | Operation |
|-----|-----|---|
| 0 | 0 | Shift cursor to the left, AC is decreased by 1. |
| 0 | 1 | Shift cursor to the right, AC is increased by 1. |
| 1 | 0 | Shift all of the display to the left, cursor moves according to the display. |
| 1 | 1 | Shift all of the display to the right, cursor moves according to the display. |

| | | | | | |
|-----------------------|-------|--------------------|----------|----------------|---------|
| Messrs. | | | | | |
| Product Specification | Model | NMTC-S0802XRYHS-13 | Rev. No. | Issued Date. | Page. |
| | | | A | August. 16, 17 | 18 / 29 |

Function Set

| RS | R/W | DB7 | DB6 | DB5 | DB4 | DB3 | DB2 | DB1 | DB0 |
|----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| 00 | 0 | 0 | 0 | 1 | DL | N | F | * | * |

DL: Interface data length control bit

When DL = "High", it means 8 – bit bus mode with MPU.

When DL = "Low", it means 4 – bit bus mode with MPU. So to speak, DL is a signal to select 8 – bit or 4 – bit bus mode. When 4 – bit bus mode, it needs to transfer 4 – bit data by two times.

N: Display line number control bit

When N = "Low", it means 1 – line display mode.

When N = "High", 2 – line display mode is set.

F: Display font type control bit

When F = "Low", it means 5 X 8 dots format display mode

When F = "High", 5 x 11 dots format display mode.

Set CG RAM Address

| RS | R/W | DB7 | DB6 | DB5 | DB4 | DB3 | DB2 | DB1 | DB0 |
|----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| 0 | 0 | 0 | 1 | AC5 | AC4 | AC3 | AC2 | AC1 | AC0 |

Set CGRAM address to AC.

This instruction makes CGRAM data available from MPU.

Set DD RAM Address

| RS | R/W | DB7 | DB6 | DB5 | DB4 | DB3 | DB2 | DB1 | DB0 |
|----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| 0 | 0 | 1 | AC6 | AC5 | AC4 | AC3 | AC2 | AC1 | AC0 |

Set DDRAM address to AC.

This instruction makes DDRAM data available from MPU.

When 1 – line display mode (N = 0), DDRAM address is from "00H" to "4FH".

In 2 – line display mode (N = 1), DDRAM address in the 1st line is from "00H" to "27H", and DDRAM address in the 2nd line is from "40H" to "67H".

| | | | | | |
|-----------------------|-------|--------------------|----------|----------------|---------|
| Messrs. | | | | | |
| Product Specification | Model | NMTC-S0802XRYHS-13 | Rev. No. | Issued Date. | Page. |
| | | | A | August. 16, 17 | 19 / 29 |

Read Busy Flag and Address

| RS | R/W | DB7 | DB6 | DB5 | DB4 | DB3 | DB2 | DB1 | DB0 |
|----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| 0 | 1 | BF | AC6 | AC5 | AC4 | AC3 | AC2 | AC1 | AC0 |

This instruction shows whether ST7066 is in internal operation or not. If the resultant BF is High, it means the internal operation is in progress and you have to wait until BF to be Low, and then the next instruction can be performed. In this instruction you can read also the value of address counter.

Write Data to RAM

| RS | R/W | DB7 | DB6 | DB5 | DB4 | DB3 | DB2 | DB1 | DB0 |
|----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| 1 | 0 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 |

Write binary 8 – bit data to DDRAM / CGRAM.

The selection of RAM from DDRAM, CGRAM, is set by the previous address set instruction: DDRAM address set, CGRAM address set. RAM set instruction can also determine the AC direction to RAM. After write operation, the address is automatically increased / decreased by 1, according to the entry mode.

Read Data to RAM

| RS | R/W | DB7 | DB6 | DB5 | DB4 | DB3 | DB2 | DB1 | DB0 |
|----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| 1 | 0 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 |

Read binary 8 – bit data from DDRAM/CGRAM.

The selection of RAM is set by the previous address set instruction. If address set instruction of RAM is not performed before this instruction, the data that read first is invalid, because the direction of AC is not determined.

If you read RAM data several times without RAM address set instruction before read operation, you can get correct RAM data from the second, but the first data would be incorrect, because there is no time margin to transfer RAM data.

In case of DDRAM read operation, cursor shift instruction plays the same role as DDRAM address set instruction : it also transfers RAM data to output data register. After read operation address counter is automatically increased/decreased by 1 according to the entry mode. After CGRAM read operation, display shift may not be executed correctly.

NOTE: In case of RAM write operation, after this AC is increased / decreased by 1 like read operation. In this time,

AC indicates the next address position, but you can read only the previous data by read instruction.

APPEARANCE CHECK

CONDIITON OF APPEARANCE CHECK:

- (1) Specimen shall be checked by eyes in distance of 30cm under 40w – fluorescence lamp.
- (2) Checking direction shall be in 45 degree from perpendicular line op specimen surface.

| | | | | | |
|-----------------------|-------|--------------------|----------|----------------|---------|
| Messrs. | | | | | |
| Product Specification | Model | NMTC-S0802XRYHS-13 | Rev. No. | Issued Date. | Page. |

HANDLING PRECAUTIONS

- (1) Treat polarizer very carefully since it is easy to be damaged.
- (2) When cleaning the display surface, use soft cloth (e.g. gauss) with a solvent (recommended below) and wipe lightly.
 - ◆ ethyl alcohol
 - ◆ iso – procolol

Do not wipe the display surface with dry or hard materials that will damage the polarizer surface.

Do not use the following solvents:

- ◆ water
- ◆ ketone
- ◆ aromatics

- (3) Direct current causes electro – chemical reaction with remarkable degradation of the display quality.
Give careful consideration to prevent direct current at ON/OFF timing and during Operation.
- (4) Avoid strong shock and drop from the height.
- (5) To prevent LCD panels from degradation, do not operate or store them exposed directly to sunshine or high temperature / humidity.
- (6) Give careful consideration to avoid electrical static discharge with causes uneven contrast.
- (7) Even a small condensation on the contact pads (terminals) causes electro-chemical reaction Which makes missing row and column. Give careful attention to avoid condensation.
When assembling with zebra connector, clean the surface of the pads with alcohol and keep the air very clean.

WARRANTY

This product has been manufactured to your company’s specifications as a part for use in your company’s general electronic products. It is guaranteed to perform according to delivery specifications. For any other use apart from general electronic equipment, we cannot take responsibility if the product is used in medical devices, nuclear power control equipment, aerospace equipment, fire and security systems, or any other applications in which there is a direct risk to human life and where extremely high levels of reliability are required. If the product is to be used in any of the above applications, we will need to enter into a separate product liability agreement.

- 1 13 months guarantee starts from the date code.
- 2 We cannot accept responsibility for any defect, which may arise from additional manufacturing of the product (including disassembly and reassembly), after product delivery.
- 3 We cannot accept responsibility for any defect, which may arise after the application of strong external force to the product.
- 4 We cannot accept responsibility for any defect, which may arise due to the application of static electricity after the product has passed your company’s acceptance inspection procedures.
- 5 We cannot accept responsibility for industrial property, which may arise through the use of your product, with exception to those issues relating directly to the structure or method of manufacturing of our product. Microtips-origin longer than one year from Microtips production.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
