

# Single-phaseDC Brushless Motor Driver IC

## ■GENERAL DESCRIPTION

The NJU7333 is a single-phase DC brushless motor driver IC for small fan-motor and high power applications. It features MOS-FET driver circuit for better saturation characteristics. Slew rate of amplifiers and feedback resistors are optimized to achieve low-noise motor operation. Maximum output current is 500mA. The NJU7333 includes frequency generator (FG) output, lock detect (with auto recovery circuit), and a thermal shutdown circuit.

## ■PACKAGE OUTLINE

## ■FEATURES

- Operating Voltage  $V_{DD}=2.4 \sim 5.5V$
- FG Output
- Internal Lock Detect / Auto Recovery Circuit
- Internal Thermal Shutdown Circuit
- Low Operating Current  $I_{DD}=3mA$  (Typ.)
- Low Saturation Output Voltage  
 $V_{sat}=\pm 0.35V @ I_o=\pm 500mA$
- C-MOS Technology
- Package Outline VSP10

### ■ APPLICATION NOTE

The NJU7333 is a single-phase DC brushless motor driver IC featuring CMOS process. It is suitable for fan motor drivers for a small equipment such as the note personal computers.

#### [Application Circuit Example]

#### [Design Notes]

Above application example is designed for 5V operation with motor current of 500mA. It uses the following components:

Hall Elements: HW101A (AKE)

##### 1. Selection of C1 and D1:

C1 is used for a noise reduction purpose. A typical value is 0.1uF.

Optimize the value in actual operating conditions if necessary. D1 is a diode for protection against reverse voltage supply. Silicon rectifier diode (W03C, 10D1 and equivalent) is appropriate.

##### 2. Lock Protection Function (Design of C2 value):

Lock Protection Function, consists of Motor Lock Detection and Auto Resume Function, is a safety feature to protect a motor and a driver circuit from fatal destruction in case of motor halt.

Motor Lock Detection detects motor halt due to irregular load conditions and then cuts motor driving current for safety operation. A value of C2 determines Lock detection time ( $T_{on}$ ) and Auto Resume Time ( $T_{off}$ ).

Lock detection time ( $T_{on}$ ) is given by:

$$T_{on} = C_2 \frac{V_{CL} - V_{ID}}{I_{CHG}} [\text{sec}]$$

Where  $C_2$  is  $0.47\mu\text{F}$ :

$$T_{on} = 0.47 \times 10^{-6} \times \frac{2.6 - 0.6}{1.5 \times 10^{-6}} = 0.62[\text{sec}]$$

Auto Resume Time ( $Toff$ ) is given by:

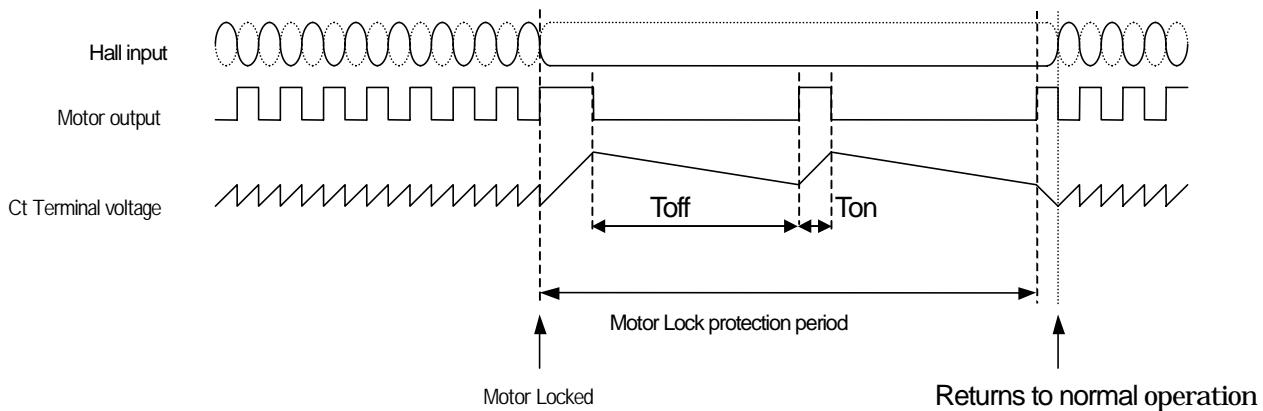

$$T_{off} = C_2 \frac{V_{CL} - V_{ID}}{I_{DCHG}} [\text{sec}]$$

Where  $C_2$  is  $0.47\mu\text{F}$ :

$$T_{off} = 0.47 \times 10^{-6} \times \frac{2.6 - 0.6}{0.5 \times 10^{-6}} = 1.88[\text{sec}]$$

In actual application, Lock detection time ( $T_{on}$ ) is affected by the mechanical time constant of a motor. Therefore, constant start up must be confirmed in actual evaluation taking operating variations (i.e.Temperature, Voltage change and so on) in consideration.

A typical value of  $C_2$  is either  $0.47\mu\text{F}$  or  $1\mu\text{F}$  depending on a motor.

### 3. Design of hall element bias resistance (**R1 and R2**)

Hall amplifier is a differential amplifier with hysteresis characteristics (24mV typical).

The common-mode input voltage is between  $0.4\text{V}$  and  $V_{DD}-1\text{V}$  and the input signal must be within the range. Non-excitation hall bias voltage is to be set at a half of  $V_{DD}$  for effective use of common-mode input voltage range. Therefore the same value of hall bias resistors is selected for  $R1$  and  $R2$ .

# NJU7333

## Preliminary

Given that the bias current is set to be 5mA by HW101A datasheet, R1 and R2 can be determined as follows:

$$R1 + R2 + Rin = \frac{V_{DD}}{I_{bias}} = \frac{5}{5 \times 10^{-3}} = 1k\Omega$$

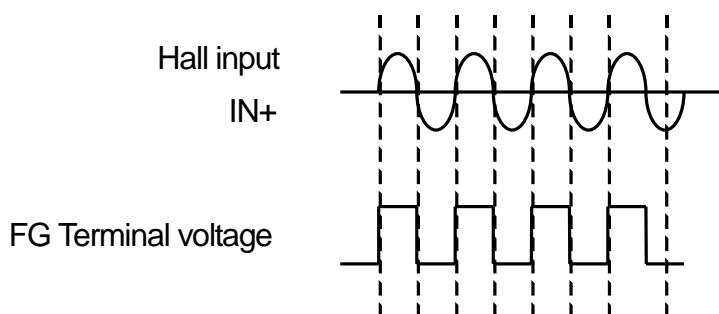

$$R1 = R2 = 300\Omega$$

The output voltage of hall elements is influenced by the bias current and magnetic flux density of hall elements.

The optimum input voltage of NJU7333 is 100mVp-p and higher. With such input voltage, the highest efficiency can be obtained.

### 4. Design of FG output resistance (R3)

FG Out(FG:Pin2) is a open drain output and R3 is a pull up register. A typical value of R3 is 10k $\Omega$ . The timing chart of FG Out is as follows.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибуторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибуторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помочь разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
