DESCRIPTION

NEC's UPC2710TB is a Silicon RFIC manufactured using the NESAT III process. This device is suitable as a PA driver amplifier for cellular radio and other communication receivers. The UPC2710TB is pin compatible and has comparable performance to the larger UPC2710T, so it is suitable for use as a replacement to help reduce system size. The IC is housed in a 6 pin super minimold or SOT-363 package.

NEC's stringent quality assurance and test procedures ensure the highest reliability and performance.

PIN DESCRIPTIONS

Pin No.	Symbol	Applied Voltage (V)	Pin Voltage (V)	Description	Internal Equivalent Circuit
1	Input	—	0.9	Signal input pin. An internal matching circuit, configured with resistors, enables 50 Ω connection over a wide bandwidth. A multi-feedback circuit is designed to cancel the deviations of h _{FE} and resistance. This pin must be coupled to the signal source with a blocking capacitor.	
4	Output	—	—	Signal output pin. Connect an inductor between this pin and V _{CC} to supply current to the internal output transistors.	
6	V _{CC}	4.5 to 5.5	—	Power supply pin. This pin should be externally equipped with a bypass capacitor to minimize ground impedance.	
2 3 5	GND	0	—	Ground pins. These pins should be connected to system ground with minimum inductance. Ground pattern on the board should be formed as wide as possible. All the ground pins must be connected together with wide ground pattern to minimize impedance difference.
