

General Description

The SY56572XR is a fully differential, low voltage 1.2V/1.8V/2.5V CML 4:1 Mux, with input equalization, and integrated 1:2 Fanout Buffer. The SY56572XR can process clock signals as fast as 4.5GHz or data patterns up to 6.4Gbps.

The differential input includes Micrel's unique 3-pin input termination architecture that interfaces to DC-coupled 2.5V/3.3V LVPECL, 1.2V/1.8V/2.5V CML or LVDS differential signals. For AC-coupled input applications, an internal voltage reference is provided for input bias. Input voltages as small as 200mV (400mV_{pp}) are applied before the 9, 18 or 27-inch FR4 transmission line.

The SY56572XR operates from a 2.5V $\pm 5\%$ core supply and a 1.2V, 1.8V or 2.5V $\pm 5\%$ output supply and is guaranteed over the full industrial temperature range (-40°C to $+85^{\circ}\text{C}$). The SY56572XR is part of Micrel's high-speed, Precision Edge® product line.

Data sheets and support documentation can be found on Micrel's web site at: www.micrel.com.

Applications

- Data Distribution
- SONET clock and data distribution
- Fiber Channel clock and data distribution
- Gigabit Ethernet clock and data distribution

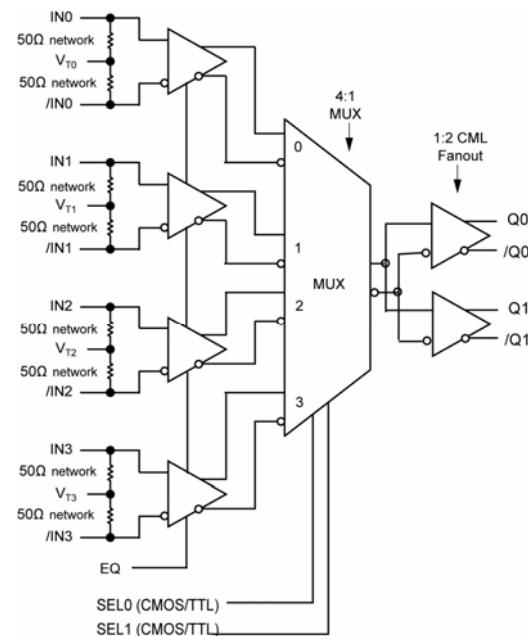

Precision Edge®

Features

- 1.2V/1.8V/2.5V CML 4:2 MUX with input equalization.
- Guaranteed AC performance over temperature and voltage:
 - DC-to > 6.4Gbps throughput
 - <360ps propagation delay (IN-to-Q)
 - <15ps within-device skew
- Ultra-low jitter design
 - <0.8ps_{RMS} random jitter
 - <10ps_{PP} deterministic jitter
- 2.5V $\pm 5\%$, 1.8/1.2V $\pm 5\%$ power supply operation
- Industrial temperature range: -40°C to $+85^{\circ}\text{C}$
- Available in 32-pin (5mm x 5mm) MLF® package

Pin Description

Pin Number	Pin Name	Pin Function
1,4 5,8 25,28 29,32	IN0, /IN0 IN1, /IN1 IN2, /IN2 IN3, /IN3	Differential Inputs: Accepts differential signals as small as 200mV (400mV _{PP}) applied to the input of a 9, 18 or 27 inch 6mil FR4 stripline transmission line. See "Input and Output Stage" section for details of this input.
2 6 26 30	VT0 VT1 VT2 VT3	Input Termination Center-Tap: Each side of the differential input pair terminates to the VT pin. This pin provides a center-tap to a termination network for maximum interface flexibility. An internal high impedance resistor divider biases VT to allow input AC coupling. For AC coupling, bypass VT with 0.1μF low ESR capacitor to VCC. See "Input Interface Applications" subsection and Figure 2a.
19	EQ	Three level input for equalization control.
15 18	SEL0 SEL1	Single-ended TTL/CMOS compatible input selects the inputs to the multiplexer. This input is internally connected to a 25kΩ pull-up resistor and will default to a logic HIGH state if left open. Input logic threshold is VCC/2. See "Truth Table" for select control.
16,17	VCC	Positive Power Supply: Bypass with 0.1uF//0.01uF low ESR capacitors as close to the V _{CC} pin as possible. Supplies the input and core circuitry.
10,13,20,23	V _{CCO}	Output Supply: Bypass with 0.1uF//0.01uF low ESR capacitors as close to the V _{CCO} pin as possible. Supplies the output buffers.
9,24	GND, Exposed pad	Ground: Exposed pad must be connected to a ground plane that is the same potential as the ground pins.
12,11 22,21	Q0, /Q0 Q1, /Q1	CML Differential Output Pair: Differential buffered copy of the input signal. The output swing is typically 390mV. See "Functional Description" subsection for termination information.

Notes:

1. Permanent device damage may occur if absolute maximum ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to absolute maximum ratings conditions for extended periods may affect device reliability.
2. The data sheet limits are not guaranteed if the device is operated beyond the operating ratings.
3. Package thermal resistance assumes exposed pad is soldered (or equivalent) to the device's most negative potential on the PCB. ψ_{JB} and θ_{JA} values are determined for a 4-layer board in still-air number, unless otherwise stated.
4. The circuit is designed to meet the DC specifications shown in the above table after thermal equilibrium has been established.
5. V_{IN} (max) is specified when V_T is floating.

Notes:

7. Propagation delay is measured with no attenuating transmission line connected to the input.
8. Output-to-Output skew is the difference in time between both outputs under identical input transition, temperature and power supply
9. Part-to-part skew is defined for two parts with identical power supply voltages at the same temperature and no skew at the edges at the respective inputs.
10. Random jitter is additive jitter.
11. Deterministic jitter is measured with $2^{23}-1$ PRBS pattern.

Functional Description

CML Output Termination with Vcco 1.2V

For VCCO of 1.2V, Figure 5a, terminate the output with 50Ω to 1.2V, not 100Ω differentially across the outputs. If AC coupling is used, Figure 5d, terminate into 50Ω to 1.2V before the coupling capacitor and then connect to a high value resistor to a reference voltage. Any unused output pair with VCCO at 1.2V needs to be terminated, do not leave floating.

CML Output Termination with VCCO 1.8V, 2.5V

For VCCO of 1.8V or 2.5V, Figure 5a/b, terminate with either 50Ω to 1.8V or 100Ω differentially across the outputs. AC-or DC-coupling is fine. For best signal integrity, terminate any unused output pairs.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибуторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибуторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помочь разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
