STK681-310 — Thick-Film Hybrid IC Forward/Reverse Motor Driver

Overview

The STK681-310 is a hybrid IC for use in current control forward/reverse DC motor driver with brush.

Applications

- Office photocopiers, printers, etc.

Features

- Allows forward, reverse, and brake operations in accordance with the external input signal.
- 4.2A startup output current and 8A peak brake output current.
- Incorporating a current detection resistor (0.10Ω), fixed current control is possible.
- Obviate the need to design for the dead time in order to turn off the upper- and lower drive devices when switching between the forward and reverse operation mode.

Specifications

Absolute maximum ratings at $T_c = 25^\circ\text{C}$

Parameter	Symbol	Conditions	Ratings	unit
Maximum supply voltage 1	V_{CC1} max	$V_{CC2}=0\text{V}$	52	V
Maximum supply voltage 2	V_{CC2} max	No signal	-0.3 to +7.0	V
Input voltage	V_{IN} max	Logic input pins	-0.3 to +7.0	V
Output current	I_O max	$V_{CC2}=5.0\text{V}$, DC current	4.2	A
Brake current	I_{OB} max	$V_{CC2}=5.0\text{V}$, square wave current, operating time 60ms (single pulse)	8	A
Allowable power dissipation	P_{dPK} max	No heat sink	3.1	W
Operating substrate temperature	T_c max		105	$^\circ\text{C}$
Junction temperature	T_J max		150	$^\circ\text{C}$
Storage temperature	T_{stg}		-40 to +125	$^\circ\text{C}$

■ Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment (home appliances, AV equipment, communication device, office equipment, industrial equipment etc.). The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for applications outside the standard applications of our customer who is considering such use and/or outside the scope of our intended standard applications, please consult with us prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.

■ Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

STK681-310

Allowable Operating Ranges at $T_a = 25^\circ\text{C}$

Parameter	Symbol	Conditions	Ratings	unit
Operating supply voltage 1	V_{CC1}	With signals applied	10 to 42	V
Operating supply voltage 2	V_{CC2}	With signals applied	$5 \pm 5\%$	V
Input voltage	V_{IN}		0 to V_{CC2}	V
Output current 1	I_{O1}	$V_{CC2}=5.0\text{V}$, DC current, $T_c \leq 70^\circ\text{C}$	4.2	A
Output current 2	I_{O2}	$V_{CC2}=5.0\text{V}$, DC current, $T_c = 90^\circ\text{C}$	3.2	A
Output current 3	I_{O3}	$V_{CC2}=5.0\text{V}$, DC current, $T_c = 105^\circ\text{C}$	2.5	A
Brake current	I_{OB}	$V_{CC2}=5.0\text{V}$, square wave current, operating time 3.6ms, $T_c = 105^\circ\text{C}$	8	A

Refer to the graph for each conduction-period tolerance range for the output current and brake current.

Electrical Characteristics at $T_c = 25^\circ\text{C}$, $V_{CC1} = 24\text{V}$, $V_{CC2} = 5.0\text{V}$

Parameter	Symbol	Conditions	min	typ	max	unit
V_{CC2} supply current	I_{CCO}	Forward or reverse operation		1.7	4	mA
FET diode forward voltage	V_{df}	$I_f = 1\text{A}$ ($R_L = 23\Omega$)		1.0	1.6	V
Output saturation voltage 1	V_{sat1}	$R_L = 23\Omega$, TR1, TR2		0.80	1.1	V
Output saturation voltage 2	V_{sat2}	$R_L = 23\Omega$, F1, F2+current detection resistance		0.19	0.26	V
Output leak current	I_{OL}	TR1, TR2, F1, and F2 OFF operation			50	μA
Input high voltage 1	V_{IH1}	IN1, IN2 pins	4.5			V
Input high voltage 2	V_{IH2}	INH pin	2.5			V
Input low voltage	V_{IL}	IN1, IN2, INH pins			0.6	V
Input current 1	I_{IH1}	IN1, IN2 pins, $V_{IH1} = 5\text{V}$	0.10	0.20	0.40	mA
Input current 2	I_{IH2}	INH pin, $V_{IH2} = 5\text{V}$	0.30	0.60	1.2	mA
Current setting voltage	V_{ref1}	Between pins V_{ref1} and S.P		0.42		V

Note: A fixed-voltage power supply must be used.

Package Dimensions

unit:mm (typ)

STK681-310

Derating Curve of Motor Current, I_O , vs. STK681-310 Operating Board Temperature, T_c

The range of DC operating current lies within the above derating curve in the V_{CC1} allowable operating range. The above motor current I_O is valid within the chopping operating range of $V_{CC1}=28V$ or lower. The above operating substrate temperature, T_c , is measured immediately when the motor is started. Since T_c fluctuates due to the ambient temperature, T_a , the motor current value, and continuous or intermittent operations of the motor current, always confirm this values using an actual set.

STK681-310

Motor Drive Conditions (H: High-level input; L: Low-Level Input)

	IN1	IN2	INH	Remarks
Stop 1 (standby)	H	H	H or L	When motor is not rotating
Stop 2 (supply power turned off by input during motor rotation)	H	H	H	Stop signal that is applied when the motor is running and used to turn off power.
	H	L	H	
	L	H	H	
Forward (CW)	H	L	L	No input signal is needed that turns off the upper- and lower-side drive devices when switching the rotational direction.
Reverse (CCW)	L	H	L	
Brake	L	L	L or H	GND side MOSFET ON

* IN1=IN2=H and INH=L are prohibited during motor rotation.

Notes

- (1) Be sure to set the capacitance of the power supply bypass capacitor, C1, so that the ripple current of the capacitor, which varies as motor current increases, falls within the allowed range.
- (2) Although the Vref2 pin is kept open, if connected to the GND or S.P pin, the overheating current control circuit ceases to function.
- (3) Fixed current chopping operations based on TR1 and TR2 are used for current control. The timing given below is used for OUT1 or OUT2 voltage output and for TR1 or TR2 collector current.

- (4) Do not connect the N.C pins shown in the internal block diagram or sample application circuit to a circuit pattern on the PCB.
- (5) This IC is not designed for use in an H-bridge driver for power supplies because the I/O response time of its GND side driving device, required when switching the motor rotational direction, is several scores of microseconds. It should be used only for DC motor drivers.

(6) Sample Timing Diagram

(7) Smoke Emission Precautions: There is a possibility of smoke emission if the hybrid IC is subjected to physical or electrical damage as the result of being used without compliance with the specifications.

I/O Functions of Each Pin

Pin Name	Pin No.	Function
IN1	12	Input pin for turning TR1 and F1 ON and OFF At high level, TR1: ON and F1: OFF; at low level TR1: OFF and F1: ON
IN2	13	Input pin for turning TR2 and F2 ON and OFF At high level, TR2: ON and F2: OFF; at low level, TR2: OFF and F2: ON
INH	14	Pin for turning TR1 and TR2 OFF; At high level TR1 and TR2: OFF This pin is usually low or open.
OUT1	8	This pin connects to the motor and outputs source/sync current depending on conditions at IN1 and IN2.
OUT2	6	This pin connects to the motor and outputs source/sync current depending on conditions at IN1 and IN2.
Vref1a Vref1b	16 18	This pin is used for current setting for constant-current operation performed with the Vrefa and Vrefb pins connected A voltage of 0.42V at Tc=25°C results for Vref1. 0.42V is set by connecting 82kΩ and 7.5kΩ in series. Current detection resistance is Rs=0.10Ω. Set using I _{O peak} =Vref1÷Rs.
Vref2	17	Be sure to usually leave this pin open. The overheating control circuit can be made to stop operating by connecting this pin to the GND or S.P pin.
S.P	2	Vref1 voltage can be lowered by connecting a resistor between the Vref1 and S.P pins.
RSO	3	This pin is used to monitor the voltage across the current sensing resistor, Rs. Must be connected to the RSI pin.
RSI	19	This pin is connected to the RSO pin and serves as an input to the circuit that compares the input with Vref1.

Technical Information

(1) Substrate temperature rise, ΔT_c (no heat sink) - Internal average power dissipation, PdAV

(2) Internal average power dissipation, Pd, in the DC current-motor current, I_Q, characteristics (typ values for Pd)

(3) Overheating current control characteristics

Overheating current control functions to prevent driver failure if a motor lock malfunction occurs.

STK681-310

(4) Derating curve of the package power dissipation, PdPK, against the ambient temperature, Ta

The package power dissipation, PdPK, refers to the internal average power dissipation, Pd, permissible if used without a heat sink

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкуренспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
