

LTC6955/LTC6955-1 Ultralow Jitter 11 Output Fanout Buffer

DESCRIPTION

Demonstration Circuit 2611A features the [LTC®6955/LTC6955-1](#), Ultralow Jitter 11 Output Fanout Buffers.

By default, the DC2611A is powered from a single 3.3V supply. An option is provided to power to the DC2611A from dual supplies, allowing for the LTC6955's output supply pins to connect to an LTC Silent Switcher® and the LTC6955 input supply pin to connect to a low noise LDO.

The differential inputs and six of the differential outputs are populated with 0.5" spaced SMA connectors. These outputs are AC-coupled with 50Ω transmission lines

making them suitable to drive 50Ω impedance instruments. The remaining four differential outputs are terminated with 100Ω.

A calibration path is provided to aid in accurate LTC6955 propagation delay measurements. The calibration path can be also reconfigured as a DC path, which allows for a convenient method of locking the LTC6955 outputs to an external PLL/VCO, as shown in Figure 2.

Design files for this circuit board are available.

All registered trademarks and trademarks are the property of their respective owners.

DEMO MANUAL DC2611A

QUICK START PROCEDURE

The DC2611A is easy to set up to evaluate the performance of the LTC6955. Follow the procedure below

DC2611A Configuration

1. Connect J27 and J28 to a power supply and apply power (see Figure 1 and the Typical DC2611A Requirements and Characteristics table).
2. Connect a low phase-noise (or jitter) single-ended signal to IN– (J25). Refer to the LTC6955 data sheet for acceptable input frequencies and amplitudes.
3. Connect desired output (OUT10, OUT8, OUT6, OUT4, OUT1 or OUT0) to a test instrument or other demo board to evaluate performance. Terminate the unused outputs with 50Ω.
4. Ensure SW0:3 are configured to enable the desired output. Setting SEL[3:1]=H and SEL0=L enables all outputs. Refer to Table 1 for a list of SEL[3:0] settings vs output states.

Be sure to power down or terminate any unused RF output with 50Ω, or poor spurious performance may result.

Troubleshooting

If the LTC6955 does not output a signal

1. Ensure LTC6955 input signal is connected to the LTC6955 IN– pin, not the LTC6955 IN+ pin.

If DC2611A performance is less than the LTC6955 data sheet specifications:

1. For unexpected spurious response, verify power supplies are low noise and spurious free power supplies. Power supplies that are based off a switching regulator architecture are known to generate spurs on low jitter clock outputs.
2. For poor phase noise results, verify the phase noise specifications of the input signal and the phase noise measurement instrument. Traditional signal sources and spectrum analyzers have higher phase noise than the LTC6955 and will degrade measurement results. To measure phase noise performance it is recommended to use a low jitter oscillator and a signal source analyzer, such as Keysight's (previously Agilent/HP) E5052.
3. Contact the factory for further troubleshooting.

Table 1. LTC6955 SEL[3:0] Settings vs Output States

DC2611A RECONFIGURATION

The following covers the hardware reconfiguration of the DC2611A. Refer to LTC6955 data sheet for a better understanding of device specific considerations.

Power Supply Options

Table 2 provides the power supply options for DC2611A. By default the DC2611A is setup to use the single supply option. However, a dual supply option is available to power the higher current supply from our Silent Switcher, such as the LT8609S. The Silent Switcher improves the power efficiency over the low noise LDO. A spurious free supply, such as a low noise LDO, is required on the LTC6955's V_{IN}^+ supply pin.

Table 2. Power Supply Options

			Power Supply Voltage/Current (Recommended Supply)	
DEFAULT	OPTION	R18	J27 (3.3V)	E10 (VIN33)
x	Single Supply	Installed	3.3V/750mA (Low Noise LDO)	NA
	Dual Supply	Do Not Install	3.3V/750mA (Silent Switcher)	3.3V/150mA (Low Noise LDO)

Input Termination Options

Table 3 provides the single-ended and differential input termination options. By default the DC2611A is setup for a single-ended input on the IN- SMA (J25). For best performance different termination networks are provided for input signals <5GHz and input signals >5GHz.

LTC6955-1 Divide by Two Coupling Spur

To help reduce the LTC6955-1's OUT10 /2 coupling spur to other outputs a ferrite bead (FB1) should be installed on the OUT10 supply pin, VOUT+ (Pin 5). For the LTC6955 FB1 should be a 0 Ω resistor.

Table 3. Input Termination Options (*)

DEFAULT	TERMINATION	R8 (Ω)	R9 (Ω)	R10 (Ω)	R11 (Ω)	R19 (Ω)	R20 (Ω)	C58	C59	C60	C61
DC2611A-A	SE, IN-, <5GHz	75	DNI	30	DNI	DNI	DNI	0.1uF	0.1uF	DNI	0.1uF
DC2611A-B	SE, IN-, \geq 5GHz	DNI	DNI	DNI	1nH	DNI	49.9	DNI	1pF	1pF	DNI
	SE, IN+, <5GHz	30	DNI	75	DNI	DNI	DNI	0.1uF	DNI	0.1uF	0.1uF
	SE, IN+, \geq 5GHz	DNI	DNI	DNI	1nH	49.9	DNI	DNI	1pF	1pF	DNI
	DIFF, CML or PECL, <5GHz	DNI	160	DNI	DNI	DNI	DNI	DNI	0.1uF	0.1uF	DNI
	DIFF, CML or PECL, \geq 5GHz	DNI	DNI	DNI	1nH	DNI	DNI	DNI	1pF	1pF	DNI
	DIFF, LVDS	DNI	DNI	DNI	160	DNI	DNI	DNI	0.1uF	0.1uF	DNI

*SE = Single-Ended, DIFF = Differential, DNI = Do Not Install

CML Outputs, OUT[10:0]

The DC2611A has 11 CML outputs. Six of these outputs are AC-coupled and brought out to SMAs (OUT10, OUT8, OUT6, OUT4, OUT1 or OUT0). To drive 50 Ω impedance instruments connect OUTx+ to the instrument and OUTx- to a 50 Ω termination, or vice versa.

The remaining five outputs (OUT9, OUT7, OUT5, OUT3, and OUT2) are terminated with a 100 Ω resistor on board. To connect these outputs to a 50 Ω instrument, remove the 100 Ω termination, and install the appropriate SMAs and AC blocking capacitors.

Refer to LTC6955 data sheet for differential termination options.

Alternate Configuration Options

To take advantage of the LTC6955's maximum output frequency and ultralow output additive phase noise, the DC2611A (LTC6955, LTC6955-1), the DC2609A (LTC6952) and the VCO rider board (DC2664A) were designed to mate directly together, as shown in Figure 2. This setup allows for options to lock the LTC6952 reference input to:

- A <7.5GHz VCO and LTC6955-1 output frequency, by utilizing the LTC6955-1 divide by two output on OUT10 to drive the LTC6952 VCO input. (refer to Figure 2)
- Any VCO and create lower jitter clocks from a LTC6955 or LTC6955-1 output than a standalone LTC6952 produces.

Refer to the LTC6952 and LTC6955 data sheet's typical application for measured results. Refer to the DC2664A demo manual for recommendation on loop filter component placement.

**ESD Caution**

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

Legal Terms and Conditions

By using the evaluation board discussed herein (together with any tools, components documentation or support materials, the "Evaluation Board"), you are agreeing to be bound by the terms and conditions set forth below ("Agreement") unless you have purchased the Evaluation Board, in which case the Analog Devices Standard Terms and Conditions of Sale shall govern. Do not use the Evaluation Board until you have read and agreed to the Agreement. Your use of the Evaluation Board shall signify your acceptance of the Agreement. This Agreement is made by and between you ("Customer") and Analog Devices, Inc. ("ADI"), with its principal place of business at One Technology Way, Norwood, MA 02062, USA. Subject to the terms and conditions of the Agreement, ADI hereby grants to Customer a free, limited, personal, temporary, non-exclusive, non-sublicensable, non-transferable license to use the Evaluation Board FOR EVALUATION PURPOSES ONLY. Customer understands and agrees that the Evaluation Board is provided for the sole and exclusive purpose referenced above, and agrees not to use the Evaluation Board for any other purpose. Furthermore, the license granted is expressly made subject to the following additional limitations: Customer shall not (i) rent, lease, display, sell, transfer, assign, sublicense, or distribute the Evaluation Board; and (ii) permit any Third Party to access the Evaluation Board. As used herein, the term "Third Party" includes any entity other than ADI, Customer, their employees, affiliates and in-house consultants. The Evaluation Board is NOT sold to Customer; all rights not expressly granted herein, including ownership of the Evaluation Board, are reserved by ADI. **CONFIDENTIALITY.** This Agreement and the Evaluation Board shall all be considered the confidential and proprietary information of ADI. Customer may not disclose or transfer any portion of the Evaluation Board to any other party for any reason. Upon discontinuation of use of the Evaluation Board or termination of this Agreement, Customer agrees to promptly return the Evaluation Board to ADI. **ADDITIONAL RESTRICTIONS.** Customer may not disassemble, decompile or reverse engineer chips on the Evaluation Board. Customer shall inform ADI of any occurred damages or any modifications or alterations it makes to the Evaluation Board, including but not limited to soldering or any other activity that affects the material content of the Evaluation Board. Modifications to the Evaluation Board must comply with applicable law, including but not limited to the RoHS Directive. **TERMINATION.** ADI may terminate this Agreement at any time upon giving written notice to Customer. Customer agrees to return to ADI the Evaluation Board at that time. **LIMITATION OF LIABILITY.** THE EVALUATION BOARD PROVIDED HEREUNDER IS PROVIDED "AS IS" AND ADI MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND WITH RESPECT TO IT. ADI SPECIFICALLY DISCLAIMS ANY REPRESENTATIONS, ENDORSEMENTS, GUARANTEES, OR WARRANTIES, EXPRESS OR IMPLIED, RELATED TO THE EVALUATION BOARD INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF MERCHANTABILITY, TITLE, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. IN NO EVENT WILL ADI AND ITS LICENSORS BE LIABLE FOR ANY INCIDENTAL, SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES RESULTING FROM CUSTOMER'S POSSESSION OR USE OF THE EVALUATION BOARD, INCLUDING BUT NOT LIMITED TO LOST PROFITS, DELAY COSTS, LABOR COSTS OR LOSS OF GOODWILL. ADI'S TOTAL LIABILITY FROM ANY AND ALL CAUSES SHALL BE LIMITED TO THE AMOUNT OF ONE HUNDRED US DOLLARS (\$100.00). **EXPORT.** Customer agrees that it will not directly or indirectly export the Evaluation Board to another country, and that it will comply with all applicable United States federal laws and regulations relating to exports. **GOVERNING LAW.** This Agreement shall be governed by and construed in accordance with the substantive laws of the Commonwealth of Massachusetts (excluding conflict of law rules). Any legal action regarding this Agreement will be heard in the state or federal courts having jurisdiction in Suffolk County, Massachusetts, and Customer hereby submits to the personal jurisdiction and venue of such courts. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement and is expressly disclaimed.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
