

DIN rail mounted relays

RE17

RE7, RE8, RE9

REXL

Panel mounted relays

RE48A

Presentation

A timing relay is a component which is designed to time events in industrial automation systems by closing or opening contacts before, during or after a set timing period.

There are two main 'families' of timing relays:

- "DIN rail mounted" relays (**RE7, RE8, RE9, RE17, REXL...**) designed for mounting on DIN rails in an enclosure,

- "Panel mounted" relays type **RE48A** designed for mounting on the front of a panel to give users easy access to the settings.

These relays have one, two or four outputs. Sometimes the second output can be either timed or instantaneous.

If the power is switched off during the timing period, the relay reverts to its initial position.

Application examples:

- opening of automatic doors,
- alarm,
- lighting in toilets,
- car park barriers ...

Definitions

The following definitions will assist in understanding the operation of these relays:

■ Relay output:

This is the most common type of output. When the relay is energized, the moving armature is attracted by the coil and so actuates the contacts, which change state. When the relay is de-energized, both the armature and the contacts revert to their initial position.

This type of output allows complete isolation between the supply and the output.

There are three types of output:

C/O : changeover contact, i.e. when the relay is de-energized, the circuit between the common point C and N/C is closed and when the relay is operating (coil energized), it closes the circuit between the common point C and N/O.	
N/C : a contact that is closed without being actuated is called a Normally Closed (N/C) contact.	
N/O : a contact that closes when actuated is called a Normally Open (N/O) contact.	

■ Solid state output:

These outputs are entirely electronic and involve no moving parts; service life is therefore increased.

■ Breaking capacity:

The current value that a contact is capable of breaking in specified conditions.

■ Mechanical durability:

The number of mechanical operating cycles of the contact or contacts.

■ Minimum switching capacity (or minimum breaking capacity):

corresponds to the minimum required current which can flow through the contacts of a relay.

■ G (Gate) Input:

Gate input allows timing in progress to be interrupted without resetting it.

Definitions (continued)

Functions

Timing functions are identified by letters.

Main timing functions	Complementary functions (1)	Definitions
A (2)		Power on delay relay
	Ac	On-delay and off-delay relay with control signal
	Ad	Pulse delayed relay with control signal
	Ah	Pulse delayed relay (single cycle) with control signal
	Ak	Asymmetrical On-delay and Off-delay with external control
	At	Power on delay relay (summation) with control signal
	Aw	Off-delay on energization or on opening of control contact
B (2)		Interval relay with control signal
	Bw	Double interval relay with control signal
C (2)		Off-delay relay with control signal
D (2)		Symmetrical flasher relay (starting pulse off)
	Di (2)	Symmetrical flasher relay (starting pulse on)
H (2)		Interval relay
	He	Pulse-on de-energization
	Ht	Interval relay (summation) with control signal
K		Delay on de-energization (without auxiliary supply)
L (2)		Asymmetrical flasher relay (starting pulse off)
	Li (2)	Asymmetrical flasher relay (starting pulse on)
	Lt	Asymmetrical flashing with partial stop of timing
N		Retriggerable interval relay with control signal on
O		Retriggerable interval delayed relay with control signal on
P		Pulse delayed relay with fixed pulse length
	Pt	Pulse delayed relay (summation and fixed pulse length) with control signal off
	Qc	Star-delta timing
	Qe	Star-delta timing
	Qg	Star-delta timing
	Qt	Star-delta timing
T		Bistable relay with control signal on
	Tt	Retriggerable bistable relay with control signal on
W		Interval relay with control signal off

(1) Complementary functions enhance the main timing functions.

Example: **Ac**: timing after closing and opening of control contact.

(2) The most commonly used timing functions.

Selection table

Selection criteria

- **Functions** (On-delay or Off-delay, counter, flashing...)
 - **Supply voltage** (example: $\sim/\text{---}$ 12 V...240 V).
 - **Timing range** for a timing relay (example: 0.05 s...100 h)
 - **Type of output** (contact or solid state) and required **Number of contacts**.
 - **Breaking capacity** or **Rated current** of contacts, expressed in Amperes.
- This is the maximum current which may flow through the contacts.

Functions	Timing range	Supply voltage	Type of output	Rated current	Relay
A	0.1 s...100 h	--- 12 V	2 C/O contacts	5 A	REXL2TMJD

Functions

U: Supply

R: Relay or solid state output

R1/R2: 2 timed outputs

R2 inst.: The second output is instantaneous if the right position is selected

T: Timing period

C: Control contact

G: Gate

Ta: Adjustable On-delay

Tr: Adjustable Off-delay

Function diagram :

 Relay de-energized

 Relay energized

 Output open

 Output closed

Function A: Power on delay relay

1 output

2 outputs

The timing period T begins on energization.

After timing, the output(s) R close(s). The second output can be either timed or instantaneous.

2 timed outputs (R1/R2) or 1 timed output (R1) and 1 instantaneous output (R2 inst.).

Function Ac: On-delay and off-delay relay with control signal

1 output

$$T = t1 + t2 + \dots$$

$$T = t'1 + t'2 + \dots$$

2 outputs

After power-up, closing of the control contact C causes the timing period T to start (timing can be interrupted by operating the Gate control contact G). At the end of this timing period, the relay closes.

When control contact C re-opens, the timing T starts.

At the end of this timing period T, the output reverts to its initial position (timing can be interrupted by operating the Gate control contact G).

The second output can be either timed or instantaneous.

2 timed outputs (R1/R2) or 1 timed output (R1) and 1 instantaneous output (R2 inst.).

Function Ad: Pulse delayed relay with control signal

After power-up, pulsing or maintaining control contact C starts the timing T.

At the end of this timing period T, the output R closes.

The output R will be reset the next time control contact C is pulsed or maintained.

Function Ah: Pulse delayed relay (single cycle) with control signal

After power-up, pulsing or maintaining control contact C starts the timing T.

A single cycle then starts with 2 timing periods T of equal duration (start with output in rest position).

Output R changes state at the end of the first timing period T and reverts to its initial position at the end of the second timing period T.

Control contact C must be reset in order to re-start the single flashing cycle.

Functions (continued)

Function Ak: Asymmetrical On-delay and Off-delay with external control

$$T_a = t_1 + t_2 + \dots$$

$$T_r = t'_1 + t'_2 + \dots$$

After power-up and closing of the control contact C, timing starts for a period T_a (timing can be interrupted by operating the Gate control contact G).
At the end of this timing period T_a , the output R closes.
Opening of control contact C causes a second timing period T_r to start (timing can be interrupted by operating the Gate control contact G).
At the end of this timing period T_r , the output R reverts to its initial state.

Function At: Power on delay relay (summation) with control signal

$$T = t_1 + t_2 + \dots$$

After power-up, the first opening of control contact C starts the timing. Timing can be interrupted each time control contact C closes. When the cumulative total of time periods elapsed reaches the pre-set value T, the output relay closes.

Function Aw: Off-delay on energization or on opening of control contact

The timing period T starts on energization.
At the end of the timing period T, the output R closes.
Closing of the control contact C makes the output R open.
Opening of control contact C restarts timing period T.
At the end of the timing period T, the output R closes.

Function B: Interval relay with control signal

After power-up, pulsing or maintaining control contact C starts the timing T.
The output R closes for the duration of the timing period T then reverts to its initial state.

Function Bw: Double interval relay with control signal

On closing and opening of control contact C, the output R closes for the duration of the timing period T.

Functions (continued)

Function C: Off-delay relay with control signal

1 output

2 outputs

After power-up and closing of the control contact C, the output R closes. When control contact C re-opens, timing T starts. At the end of the timing period, output(s) R revert(s) to its/their initial state. The second output can be either timed or instantaneous.

2 timed outputs (R1/R2) or 1 timed output (R1) and 1 instantaneous output (R2 inst.).

Function D: Symmetrical flasher relay (starting pulse off)

1 output

2 outputs

Repetitive cycle with two timing periods T of equal duration, with output(s) R changing state at the end of each timing period T. The second output can be either timed or instantaneous.

2 timed outputs (R1/R2) or 1 timed output (R1) and 1 instantaneous output (R2 inst.).

Function Di: Symmetrical flasher relay (starting pulse on)

1 output

2 outputs

Repetitive cycle with two timing periods T of equal duration, with output(s) R changing state at the end of each timing period T. The second output can be either timed or instantaneous.

2 timed outputs (R1/R2) or 1 timed output (R1) and 1 instantaneous output (R2 inst.).

Function H: Interval relay

1 output

2 outputs

On energization of the relay, timing period T starts and the output(s) R close(s). At the end of the timing period T, output(s) R revert(s) to its/their initial state. The second output can be either timed or instantaneous.

2 timed outputs (R1/R2) or 1 timed output (R1) and 1 instantaneous output (R2 inst.).

Functions (continued)

Function He: Pulse-on de-energization

On de-energization, the output R closes for the duration of a timing period T.

Function Ht: Interval relay (summation) with control signal

On energization, the output R closes for the duration of a timing period T then reverts to its initial state.

Pulsing or maintaining control contact C will again close the output R.

Timing T is only active when control contact C is released and so the output R will not revert to its initial state until after a time $t_1 + t_2 + \dots$.

The relay memorises the total, cumulative opening time of control contact C and, once the set time T is reached, output R reverts to its initial state.

$T = t_1 + t_2 + \dots$

Function K: Delay on de-energization (without auxiliary supply)

1 output

2 outputs

On energization, the output(s) R close(s).
On de-energization, timing period T starts and, at the end of this period, the output(s) R revert to its/their initial state.

Function L: Asymmetrical flasher relay (starting pulse off)

Repetitive cycle consisting of two, independently adjustable timing periods T_a and T_r .
Each timing period corresponds to a different state of the output R.

Function Li: Asymmetrical flasher relay (starting pulse on)

Repetitive cycle consisting of two, independently adjustable timing periods T_a and T_r .
Each timing period corresponds to a different state of the output R.

Function Lt: Asymmetrical flashing with partial stop of timing

Repetitive cycle comprises of two, independently adjustable timing periods T_a and T_r .
Each timing period corresponds to a different state of the output R.

Gate control contact G can be operated to partially stop timing periods T_a and T_r .

$T_r = t_1 + t_2 + \dots$

$T_a = t'_1 + t'_2 + \dots$

Functions (continued)

Function N: Retriggerable interval relay with control signal on

After power-up and an initial control pulse C, the output R closes. If the interval between two control pulses C is greater than the set timing period T, timing elapses normally and the output R opens at the end of the timing period. If the interval is not greater than the set timing period, the output R remains closed until this condition is met.

Function O: Retriggerable interval delayed relay with control signal on

An initial timing period T begins on energization. At the end of this timing period, the output R closes.

As soon as there is a control pulse C, the output R reverts to its initial state and remains in that state until the interval between two control pulses is less than the value of the set timing period T. Otherwise, the output R closes at the end of the timing period T.

Function P: Pulse delayed relay with fixed pulse length

The timing period T starts on energization.

At the end of this period, the output R closes for a fixed time P.

P = 500 ms

Function Pt: Pulse delayed relay (summation and fixed pulse length) with control signal off

On energization, timing period T starts (it can be interrupted by operating control contact C).

At the end of this period, the output R closes for a fixed time P.

$T = t_1 + t_2 + \dots$

P = 500 ms

Function Qc: Star-delta timing

Timing for star delta starter with contact for switching to star connection.

Function Qe: Star-delta timing

On energization, the star contact closes instantly and timing starts.

At the end of the timing period, the star contact opens.

After a 80 ms pause, the delta contact closes and remains in this position.

Functions (continued)

Function Qg: Star-delta timing

Timing for star delta starter with contact for switching to star connection.

Function Qt: Star-delta timing

Timing for star-delta starter with double On-delay period.

Function T: Bistable relay with control signal on

After power-up, pulsing or maintaining of control contact C switches the output on. A second pulse on the control contact C switches the output R off.

Function Tt: Retriggerable bistable relay with control signal on

After power-up, pulsing or maintaining control contact C switches output R on and starts timing. The output switches off at the end of the timing period T or following a second pulse on the control contact C.

Function W: Interval relay with control signal off

1 output

2 outputs

2 timed outputs (R1/R2) or 1 timed output (R1) and 1 instantaneous output (R2 inst.).

After power-up and opening of the control contact, the output(s) close(s) for a timing period T. At the end of this timing period the output(s) revert to its/their initial state. The second output can be either timed or instantaneous.

RE48ATM12MW

Function A: Delay on energization

RE48ACV12MW

Function L: Asymmetrical flashing, start with output in rest position

Function Li: Asymmetrical flashing, start with output in operating position

RE48A ML12MW

Function A: Delay on energization

Function B: Timing on impulse, one shot

Function C: Timing after opening of control contact

Function Di: Symmetrical flashing, start with output in operating position

RE48AMH13MW

Functions A1, A2: Delay on energization

Functions H1, H2: Pulse-on energization

Note: If A1 or H1 is selected, only R2 is timed, R1 is instantaneous

Zelio Time - timing relays

Modular relays with solid state or relay output, width 17.5 mm/0.69 in.

Solid state output

- Multifunction, dual function or single function
- Multi-range (7 selectable ranges)
- Multivoltage
- Solid state output: 0.7 A
- Screw terminals

RE17LAMW

RE17LLBM

Relay output, 1 C/O contact

- Dual function or single function
- Multi-range (7 selectable ranges)
- Multivoltage
- 1 relay output: 8 A
- Screw terminals
- State indication by 1 LED
- Option of supplying a load in parallel
- 3-wire sensor control option

Zelio time - timing relays

Industrial single, dual or multifunction relays,
relay output, width 22.5 mm/0.89 in.

Output 1 C/O and 2 C/O contacts

- Multifunction, dual function or single function
- Multiple timing ranges (7 switchable ranges)
- Multivoltage
- 1 and 2 relay outputs: 8 A - 250 V (10 A UL)
- Screw or spring terminals
- State indication by 1 LED
- Option of supplying a load in parallel
- 3-wire sensor control option

Zelio Time - timing relays

Universal plug-in relays, 11-pin,
relay output, width 35 mm/1.38 in.

Output 2 C/O contacts

- Multifunction, dual function or single function
- Multiple timing ranges (7 switchable ranges)
- Multivoltage
- 2 relay output: 8 A - 250 V (10 A UL)
- Plug-in
- State indication by 1 LED
- Option of supplying a load in parallel
- 3-wire sensor control option

Output, 2 C/O and 4 C/O contacts

- Miniature and plug-in (21 x 27 mm/0.827 x 1.062 in.)
- Single function: function A = delay on energization
- Rated current ~ 5 A
- 7 timing ranges (0.1 s to 100 h)
- Multivoltage
- Excellent immunity to interference
- Power on and relay energized indication by 2 LEDs

(1) The inputs are mixed with the relay's supply terminals, with the outputs being located on the opposite side of the socket

Zelio Time - timing relays

Panel-mounted universal, plug-in relays,
relay output

Output 1 C/O or 2 C/O contacts

- LCD display
- Multifunction or single function
- Multirange
- Multivoltage
- 1 8A relay or 2 relay outputs: 5 A (RE8885740●), 8 A (RE8885730●)
- Reset function on front panel (RE8885730●)
- Memory in the event of mains power failure (RE 88 857 30●)
- Locking of access to programming (RE8885710● and RE8885700●)
- Upcount or downcount mode
- Internal supply by lithium battery (10 years at 20 °C)

RE8885740●

RE8885760●

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
