WARNING

MOLEX CANNOT BE RESPONSIBLE FOR DAMAGE OR INJURY RESULTING FROM UNSAFE PRODUCT USE, LACK OF MAINTENANCE, OR INCORRECT PRODUCT AND SYSTEM APPLICATION.

All WARNINGS must be carefully observed to help prevent personal injury.

AIR/HYDRAULIC PUMP

HAND/FOOT OPERATED - MAXIMUM CAPACITY:
10,000 PSI

WARNING Before operating the hydraulic pump, all hose connections must be tightened with proper tools. Do not over-tighten. Connections need only be tightened securely and leak-free. Over-tightening may cause premature thread failure or may cause high-pressure fittings to split at pressures lower than their rated capacities.

WARNING Should a hydraulic hose ever rupture, burst, or need to be disconnected, immediately shut off the pump and shift the control valve twice to release all pressure. Never attempt to grasp a leaking hose under pressure with your hands. The force of escaping hydraulic fluid could cause serious injury.

WARNING Do not subject the hose to potential hazard such as fire, extreme heat or cold, sharp surfaces, or heavy impact. Do not allow the hose to kink, twist, curl, or bend so tightly that the oil flow within the hose is blocked or reduced. Periodically inspect the hose for wear because any of these conditions can damage the hose and possibly result in personal injury.

WARNING Do not use the hose to move attached equipment. Stress may damage hose and possibly cause personal injury.

WARNING Hose material and coupler seals must be compatible with the hydraulic fluid used. Hoses must not encounter corrosive materials such as creosote-impregnated objects and some paints. Consult the

manufacturer before painting a hose. Never paint the couplers. Hose deterioration due to corrosive materials may result in possible personal injury.

Pump

WARNING Do not exceed the PSI hydraulic rating noted on the pump nameplate or tamper with the internal high pressure relief valve. Creating pressure beyond rated capacities may result in personal injury.

WARNING Before replenishing the oil level, retract the system to prevent overfilling the pump reservoir. An overfill may cause personal injury due to excess reservoir pressure created when cylinders are retracted.

Cylinder

WARNING Do not exceed rated capacities of the cylinders. Excess pressure may result in personal injury.

WARNING Do not set poorly balanced or off-center loads on a cylinder. The load may tip and cause personal injury.

Air Supply

WARNING Shut off and disconnect the air supply when the pump is not in use or before breaking any connection in the system.

WARNING If the swivel base-mounting plate is to be removed from the DLH (19078-0478) crimping head, unscrew the M5 X 20 SHCS from the swivel base. Remove the M6 X 50 SHCS with the nut and replace with an M6 X 25 SHCS.

WARNING MOLEX SPECIFICATIONS ARE VALID ONLY WHEN USED WITH MOLEX TERMINALS AND TOOLING.

Principal Mechanical Parts of the 19286-0065 (PPDLHBA-CS)

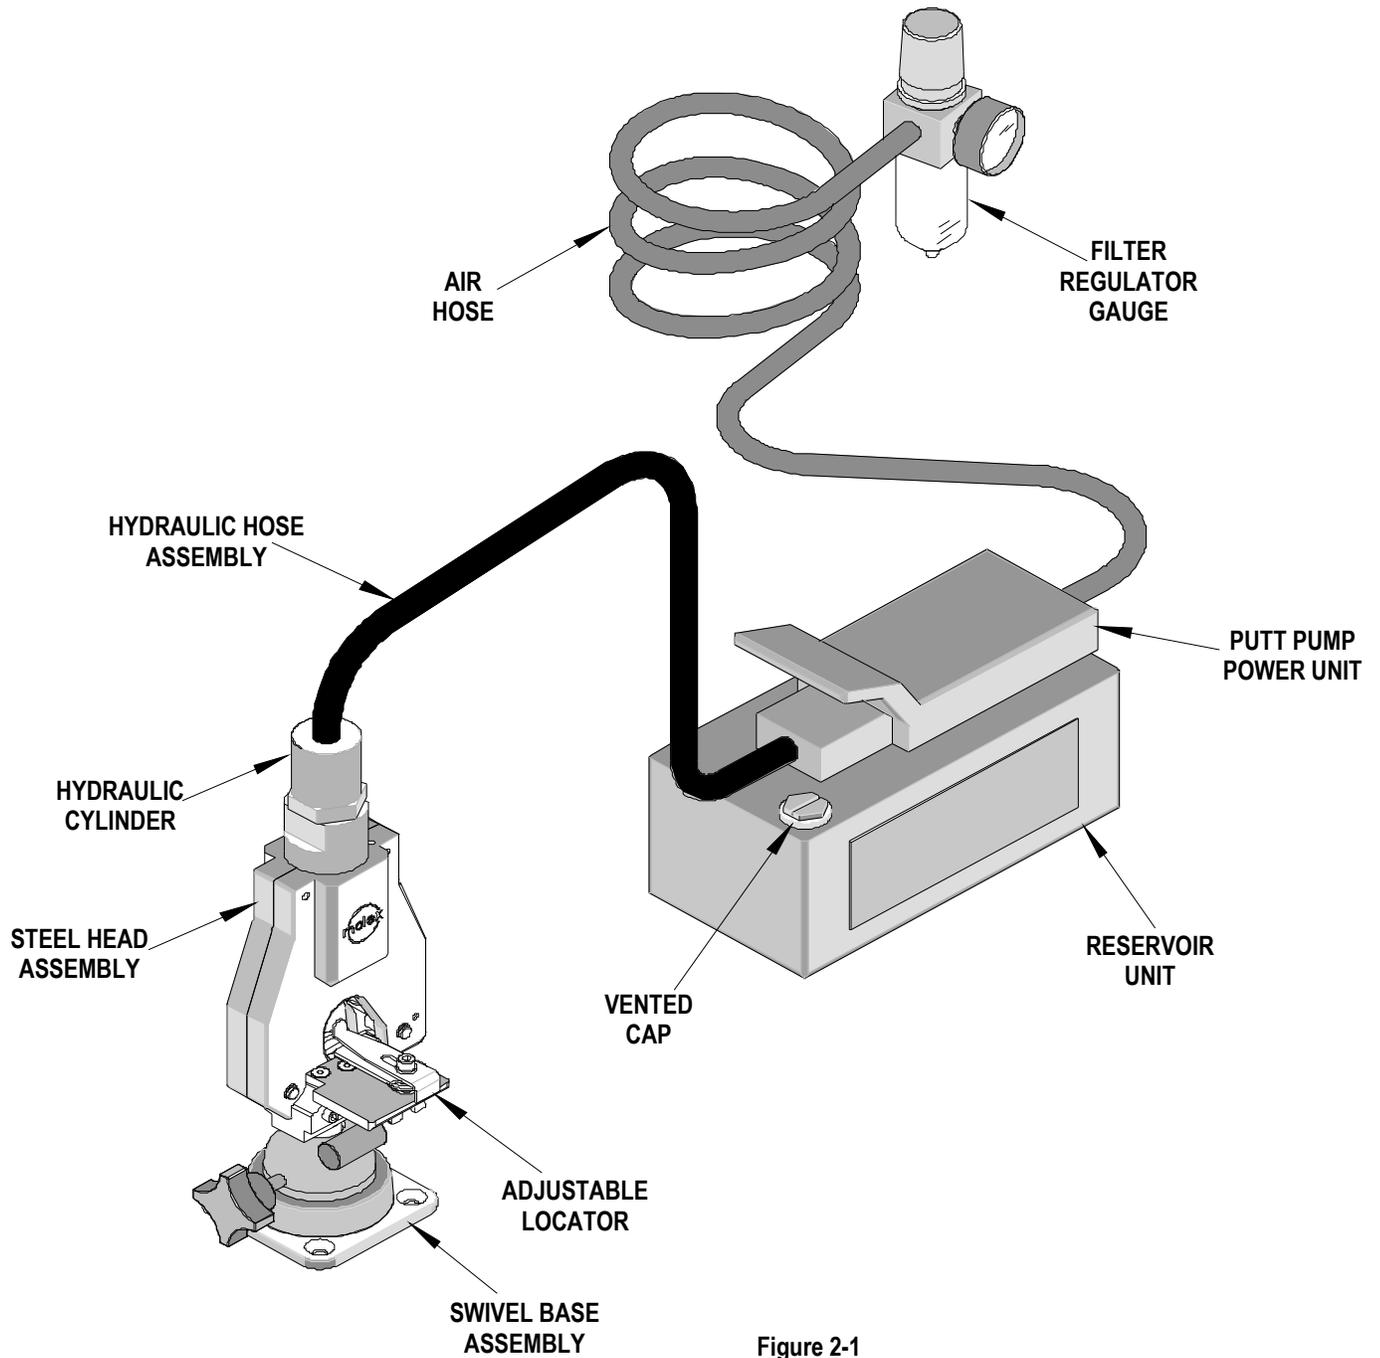

Figure 2-1

General Description

2.1 Description (See Figure 2-1)

The Molex Putt Pump Dieless Head Crimper is a combination Air and Hydraulic crimping system which utilizes four crimp “nibs” (3 moving and one stationary). The three movable nibs close against the terminal, which nests on the fourth nib, creating crimp indentations from the top, bottom and both sides, resulting in a four sided (quad) crimp.

The operator adjusts the air pressure thru the air gauge to produce the proper crimp.

This tool is designed to crimp 8 AWG to 500MCM insulated and uninsulated terminals and splices.

This tool is also designed to crimp 8 AWG to 500MCM heavy duty compression terminals and connectors. These terminals are used for electrical and industrial applications such as generators, switch gear, transformers, motor controls, power distribution equipment, welding equipment, telecommunications and utilities.

2.2 Features

- Crimps a wide range of products and does not require die set changes, which reduce the overall cost and provides production flexibility.
- Swivel base and terminal locator included to provide the operator with a user-friendly tool to increase productivity.
- Complete lightweight system that allows tool to be moved and stored easily.

2.3 Technical Specification

Pneumatic:

Supply Pressure: 100 PSI (6.9 Bars)
 Air Pressure: 125-PSI max. (8.6 Bars max.)
 Cycle Time: 15 seconds

2.4 Delivery Check

Carefully remove the Putt Pump Dieless Head from its shipping container and determine that the following items are included in the package.

Description	Quantity
19286-0029 Swivel Base Mount	1
19286-0200 Steel Head Assembly	1
19286-0059 PuttPump Power Unit with hoses	1
19286-0049 Filter regulator with gauge	1
TM-192860065 Instruction Manual	1

2.5 Tools

The following tools are recommended for setup and adjustments.

- ✓ Metric standard hex wrench set
- ✓ Adjustable wrench
- ✓ Wire stripper / cutter

Section 3

Set-Up and Adjustments

- 3.1. Setup
- 3.2. Adjustments
- 3.3. Alternative Pump Settings

3.1 Set-Up

Caution: Always disconnect the air pressure until the system is ready to operate.

The principal mechanical parts of the 19286-0065 are illustrated in Section 6 Assembly Drawings.

Air Supply Hook-Up

1. Select the 1/4 NPT threaded fittings that are compatible with your air supply.
2. Next install the fittings to the filter, regulator, gauge unit. The air supply should be 20 CFM (550 L/M) and 100 PSI (6.9 Bars) to obtain the rated hydraulic output. Air pressure should be regulated to a maximum of 125 PSI (8.6 Bars). See Figure 3-1.

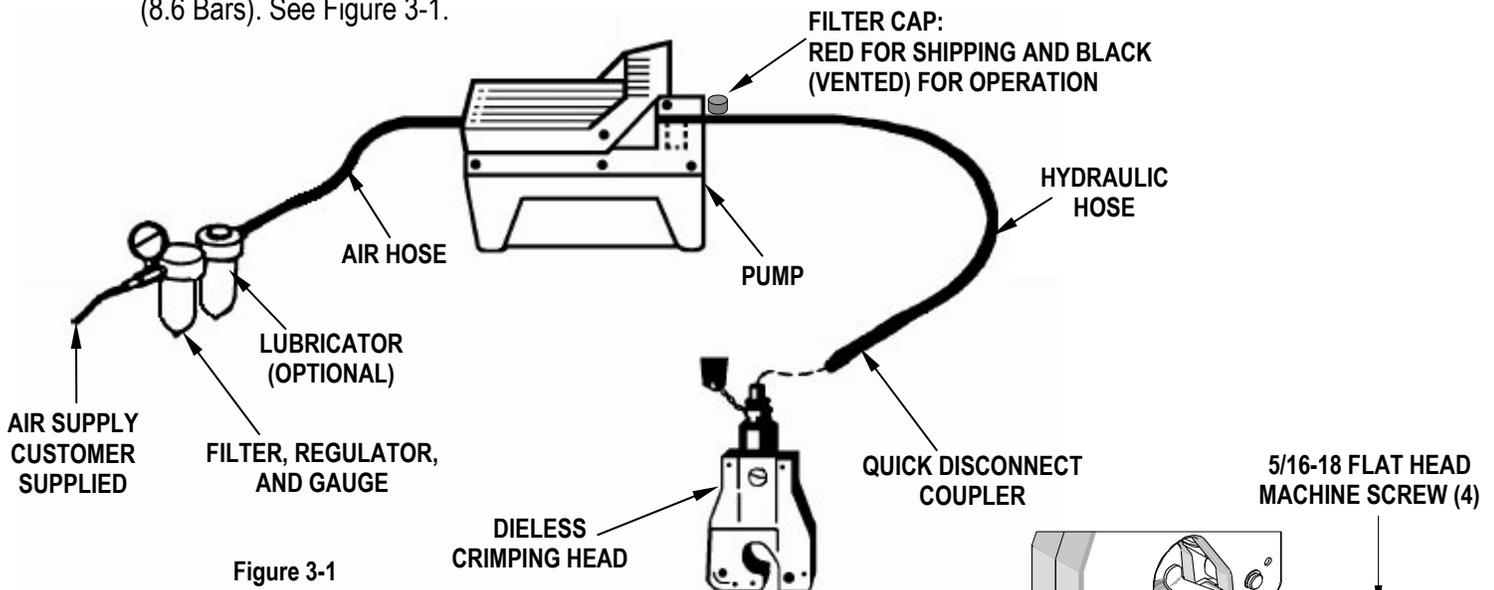

Figure 3-1

Hydraulic Connections and Bench Mounting

1. Remove the dust cap from the cylinder on the crimp head.
2. Connect the quick disconnect coupler onto the cylinder inlet on the crimp head. See figure 3-1.
3. Replace the red filler cap on the pump reservoir with the black vented cap that is supplied with the unit.
4. Before attempting to crimp any terminals, be sure the Swivel Base is securely fastened to a clean, sturdy work bench or table in a well-lighted area. Fasten the base with four 5/16-18 flat head machine screws, nuts and washers of sufficient length for the table top. (Not supplied). See Figure 3-2.

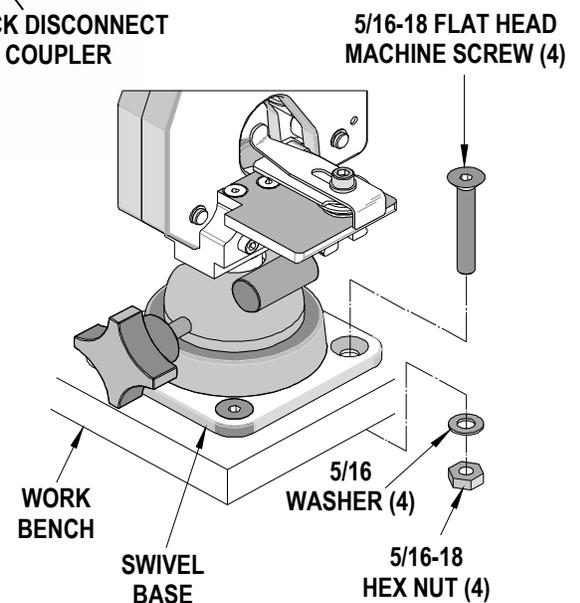

Figure 3-2

WARNING: Seal all external pipe connections with a high quality, non-hardening pipe sealant. Teflon tape may also be used to seal hydraulic connections if only one layer of tape is used.

3.2. Adjustments

Recommended air pressure gauge settings to obtain proper crimp on noninsulated and insulated terminals and splices.

Wire Size (AWG)	*SPX Power Team Pump	Pump Output Hydraulic Pressure (Ref.)	DLH Head Crimp Pressure (Ref.)
8	40 PSI	4000 PSI	4960 PSI
6	45 PSI	4500 PSI	5580 PSI
4	50 PSI	5000 PSI	6200 PSI
2	55 PSI	5500 PSI	6820 PSI
1	65 PSI	6500 PSI	8060 PSI
1/0	65 PSI	6500 PSI	8060 PSI
2/0	70 PSI	7000 PSI	8680 PSI
3/0	75 PSI	7500 PSI	9300 PSI
4/0	75 PSI	7500 PSI	9300 PSI
250 MCM	85 PSI	8500 PSI	10,540 PSI
300 MCM	90 PSI	9000 PSI	11,160 PSI
350 MCM	90 PSI	9000 PSI	11,160 PSI
400 MCM	100 PSI	10,000 PSI	12,400 PSI
500 MCM	100 PSI	10,000 PSI	12,400 PSI

*The SPX Power Team pump is currently shipped with the 19286-0065 tool. This pump has a 100:1 oil / air pressure ratio at the outlet hose with a 10,000 max. safety, regardless of air input. The pressure ratio at the crimp dies is 124:1 (6.2 ton max.)

3.3. Alternative Pump Settings

The following chart shows the pressure settings for other equivalent pumps. (Ref. only)

Wire Size (AWG)	OTC Pump	Enerpac Turbo Pump
8	30 PSI	21 PSI
6	35 PSI	25 PSI
4	40 PSI	28 PSI
2	45 PSI	32 PSI
1	60 PSI	42 PSI
1/0	60 PSI	42 PSI

Section 4

Terminal Specifications and Crimping Operation

- 4.1 Scope
- 4.2 Terminal Specifications Chart
- 4.3 Crimping Terminals

4.1 SCOPE

Heavy Duty Compression Terminals and Connectors 8 AWG to 500 MCM. Standard and Long Barrel with one to two holes for copper conductors only.

Testing

Mechanical

The tensile test, or pull test, is a means of evaluating the mechanical properties of the crimped connections. The following charts show the UL specifications for various wire sizes. The tensile strength is shown in pounds, which indicates the minimum acceptable force to break or separate the terminal from the conductor.

Wire Size (AWG)	Color Code	*UL – 486A
8	Red	90
6	Blue	100
4	Gray	140
2	Brown	180
1	Green	200
1/0	Pink	250
2/0	Black	300
3/0	Orange	350
4/0	Purple	450
250 MCM	Yellow	
300 MCM	White	
350 MCM	Red	
400 MCM	Blue	
500 MCM	Brown	

*UL – 486A – Terminals (Copper Conductors Only)

The following is a partial list of the product part numbers and their specifications that this tool is designed to run. We will be adding to this list and an up to date copy is available on www.molex.com.

4.3 Crimping Terminals

Before crimping, set the recommended air pressure gauge to obtain the proper crimp . See Section 3.2 (Adjustments).

1. Adjust wire stop to position terminal barrel centered on the Indentor nibs. See figure 4-1
2. Adjust wire stop so conductor is visible beyond terminal barrel but not so far that it effects use of terminal.
3. Position the terminal in the locator as shown in Figure 4-2 and 4-3. Insert the properly stripped wire into the terminal barrel. The wire ends should butt up against the wire stop of the locator.

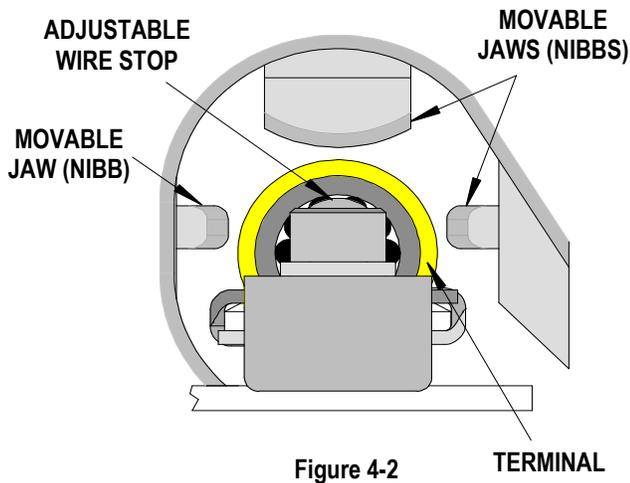

Figure 4-2

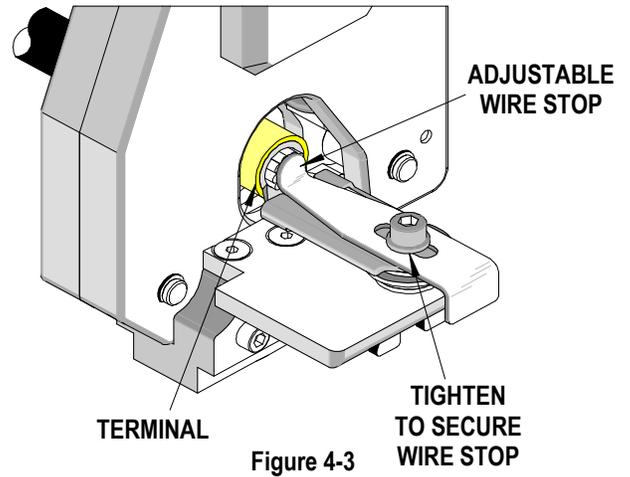

Figure 4-3

4. If the terminal is too big or the barrel of the terminal has a closed end, take off the locators and the wire stop. Position the terminal in the center of the jaws. Insert the properly stripped wire visually into the terminal barrel, as shown in Figure 4-4.
5. Depress the pedal on the putt pump to activate the jaws. The crimping process is done in small increments gradually allowing the press to fully crimp the terminal into the wire.
6. After the terminal is fully crimped, depress the elevated portion of the pedal to release the pump. This will allow the jaws to release.
7. Remove the crimp and inspect for proper crimp location.

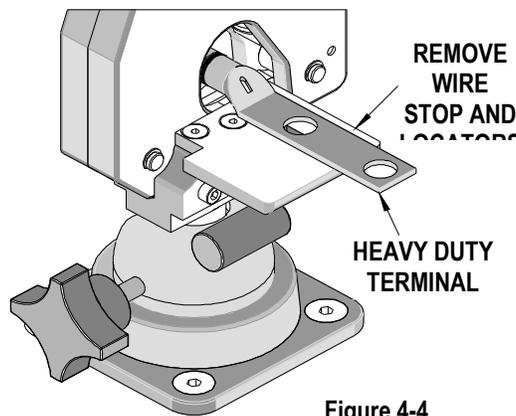

Figure 4-4

Section 5

Maintenance

- 5.1 Lubrication
- 5.2 Bleeding Air From the System
- 5.3 Inspecting the Hydraulic Fluid Level
- 5.4 Refilling the Reservoir
- 5.5 Periodic Cleaning
- 5.6 Spare Parts
- 5.7 Perishable Parts
- 5.8 Storage

5.1 Lubrication

WARNING: Any repair or servicing, which requires dismantling the pump must be performed in a dirt-free environment by a qualified technician.

CAUTION: Always disconnect power supply before all maintenance

If the pump is operated on a continuous duty cycle for extended periods, the manufacturer recommends an automatic air line oiler be installed in the air inlet as close to the pumping unit as possible.

Set the unit to feed approximately 1 drop of oil per minute into the system. Use SAE No. 10 oil.

5.2 Bleeding Air From The System

During the initial moments of activation or after prolonged use, a significant amount of air may accumulate within the hydraulic system. This entrapped air may cause the cylinder to respond slowly or behave in an unstable manner.

To remove the air, run the system through several cycles (extending and retracting the ram) free of any load. The rams must be at a lower level than the pump to allow air to be released through the pump reservoir.

5.3 Inspecting The Hydraulic Fluid Level

CAUTION: Always disconnect power supply before all maintenance

1. Check the oil level in the reservoir after every 10 hours of use.
2. The oil level should come to within 1/2" of the filler plug with all hoses attached.
3. Drain and replenish the reservoir with an approved, high-grade hydraulic oil such as OTC 16355 after every 300 hours of use.

Hoses: Hydraulic hoses on this unit carry a rating of 10,000 PSI.
Replacement hoses must carry the same rating.

5.4 Refilling The Reservoir

CAUTION: Always disconnect power supply before all maintenance

1. If additional oil must be added to the reservoir, use only an approved high grade hydraulic oil such as OTC 16355 (215 SSU @ 100° F).
2. Clean the entire area around the filler plug before adding oil to the reservoir.
3. Remove the filler plug and insert a clean funnel with filter.
4. The ram must be fully retracted and the air supply disconnected when adding the oil to the reservoir.

5.5 Venting the Reservoir

To improve oil delivery and increase useable oil capacity, vent the reservoir by removing the vent screw from the filler plug before using the pump. See Figure 5-1.

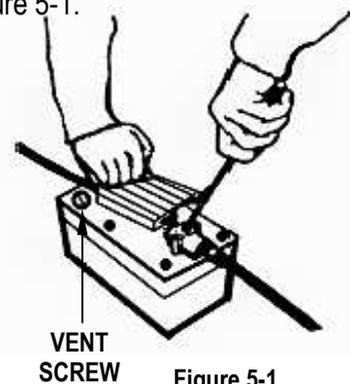

Figure 5-1

5.6 Priming the Pump Unit

If the pump unit must be primed, perform the following procedure:

1. Depress the release end of the pedal while holding down the air intake valve with a flathead screwdriver. See Figure 1-3. The air intake valve is located directly under the pedal in the area marked PUMP. This "button" is depressed simultaneously with the RELEASE area of the pedal during priming.

2. Allow the pump to cycle approximately 15 seconds.
3. Remove the screwdriver and depress the pump end of the pedal once more.
4. If the ram extends or pressure builds, the pump has been successfully primed.
5. If the pump does not respond, repeat the procedure, repeatedly jogging the air intake valve while holding the pedal in the RELEASE position.

A routine should be established to keep the pump as free from dirt as possible.

1. All unused couplers should be sealed with thread protectors.
2. All hose connections must be free of grit and grime.
3. Any equipment hooked up to the pump should also be kept clean.
4. Use only an approved, clean hydraulic oil, such as OTC 16355, in this unit and change as recommended (every 300 hours).

5.7 Periodic Cleaning

CAUTION: Always disconnect power supply before all maintenance

An example of a maintenance chart is shown below. Copy and use this chart to track the maintenance of your 19286-0065 or use this as a template to create you own schedule or use your company’s standard chart, if applicable.

Preventive Maintenance Chart

Daily: Clean. See Section 3.5.
As Required: Lubricate. See Section 3.1.

CHECK SHEET MONTH _____ YEAR _____

Week	Daily Use	Days of the Week							Solution
		MON	TUE	WED	THU	FRI	SAT	SUN	
1									
2									
3									
4									
Lubrication	1 drop per minute into the system								Use SAE No. 10 Oil
Change Hydraulic oil	300 Hours								Use OTC 16355
Bleeding Air From the System	After prolong use								Run the system thru several cycles.
Refilling Reservoir	10 hours or when needed								Use 215 SSU@100°F (otc 16355)
Cleaning	Hose connections free of grit and dirt. Pump kept clean								Use soft cloth

Schedule should be adjusted up or down depending on usage. Molex recommends that a log of preventive maintenance be kept with the tool.

5.8 Spare Parts

Customers are responsible for maintaining the tool. Spare parts are available from Molex. Moving and functioning parts can be damaged or wear out over time and will require replacement. Molex recommends that the customer keep some or all of them in stock to reduce production down time. These parts are identified in the Parts List. See Section 6.

5.9 Perishable Parts

Customers are responsible for maintaining the 19286-0065. Perishable parts are those parts that come in contact with the product and will wear out over time. Molex recommends that all customers keep at least one set of the perishable tooling in stock at all times. This will reduce the amount of production down time.

5.10 Storage

When storing the 19286-0065 assembly, disconnect the air supply and store in a dry location. If the pump is disconnected from the dieless crimper, reinstall the dust cap on the cylinder inlet. When transporting, reinstall the red-vented cap on the pump reservoir.

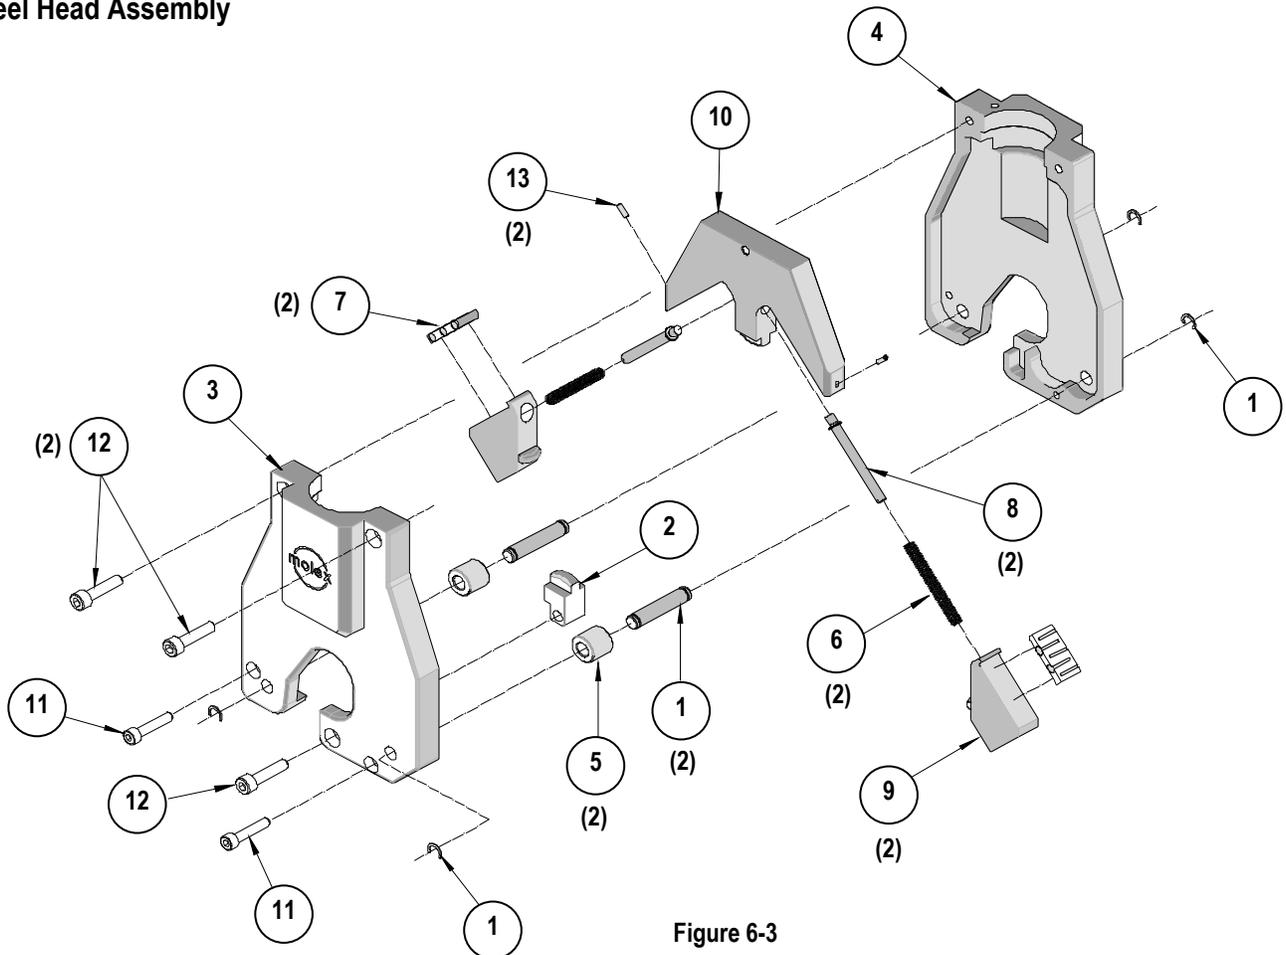

Figure 6-3

6.2 Troubleshooting

Symptom	Cause	Solution
Pump reciprocates but no oil delivery. (Ram will not extend)	▪ Low oil level.	Replenish oil reservoir.
	▪ Pump not primed.	Depress air intake valve and hydraulic release valve simultaneously.
	▪ Check oil filter for contamination.	Invert pump. Fill intake filter with oil. Depress pedal end marked "pump."
Low oil delivery. (Ram extends slowly)	▪ Reservoir not vented	Remove filter and clean.
	▪ Inadequate air supply: 1. Check air input supply. 2. Contamination, check air side of pump. Thoroughly inspect the slot in the air cylinder tube.	1. Should be 20 CFM minimum. 2. Clean and reassemble.
Pump will not build to maximum pressure. (No visible leakage)	▪ Hydraulic failure: 1. Check the oil filter for contamination. 2. Air in hydraulic system.	1. Clean and reinstall. 2. Bleed the system as described in "PREVENTATIVE MAINTENANCE" Section.
	▪ Check the air supply.	100 PSI is required to obtain maximum pressure.
Pump builds pressure but will not hold system pressure.	▪ Check hydraulic connections.	Refit as needed.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
