۷4

#### **Features**

- Ultra Broad Bandwidth: 50MHz to 26GHz
- 0.9 Insertion Loss, 34dB Isolation at 20GHz
- 50nS Switching Speed
- Reliable, Fully Monolithic, Glass Encapsulated Construction
- +33dBm Power Handling
- RoHS Compliant

## **Description**

The MASW-004100-1193 is a SP4T, series-shunt, broad band, PIN diode, switch made with M/A-COM Tech's unique HMIC<sup>TM</sup> (Heterolithic Microwave Integrated Circuit) process, US Patent 5,268,310. This process allows for the incorporation of silicon pedestals that form the series and shunt diodes or vias by imbedding them in a low loss, low dispersion glass. This hybrid combination of silicon and glass gives HMIC switches exceptional low loss and remarkably high isolation through low millimeter-wave frequencies.

This high performance switch is suitable for use in multi-band ECM, radar, and instrumentation control circuits where high isolation to insertion loss ratios are required. With a standard +5V/-5V, TTL controlled PIN diode driver, 50nS switching speeds are achieved.

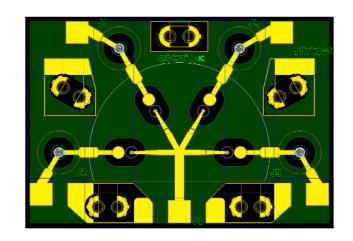

Parameter	Value		
Operating Temperature	-65°C to +125°C		
Storage Temperature	-65°C to +150°C		
RF C.W. Incident Power (± 20mA)	+33dBm		
Bias Current ( Forward )	± 20mA		
Applied Voltage ( Reverse )	-25 Volts		

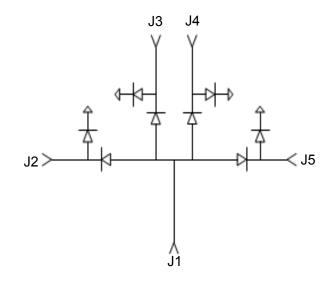

#### Notes:

**Exceeding these limits may cause permanent** damage.

Maximum operating conditions for the combination of RF Power, D.C. Bias, and temperature: +33dBm, @ 15mA/Diode @ +85°C

Commitment to produce in volume is not guaranteed.

ADVANCED: Data Sheets contain information regarding a product M/A-COM Technology Solutions is considering for development. Performance is based on target specifications, simulated results, and/or prototype measurements. Commitment to develop is not guaranteed. PRELIMINARY: Data Sheets contain information regarding a product M/A-COM Technology Solutions has under development. Performance is based on engineering tests. Specifications are typical. Mechanical outline has been fixed. Engineering samples and/or test data may be available.

# **Typical Driver Connections**

Control Level ( DC Current ) at Port		Condition of RF Output	Condition of RF Output	Condition of RF Output	Condition of RF Output		
J2	J3	J4	J5	J1-J2	J1-J3	J1-J4	J1-J5
-20mA	+20mA	+20mA	+20mA	Low Loss	Isolation	Isolation	Isolation
+20mA	-20mA	+20mA	+20mA	Isolation	Low Loss	Isolation	Isolation
+20mA	+20mA	-20mA	+20mA	Isolation	Isolation	Low Loss	Isolation
+20mA	+20mA	+20mA	-20mA	Isolation	Isolation	Isolation	Low Loss

# **Electrical Specifications** T<sub>AMB</sub> = +25°C, ± 20mA Bias Current (On-Wafer Measurements)

Parameter	Frequency	Minimum	Nominal	Maximum	Units
Insertion Loss	20 GHz		0.9	1.3	dB
Isolation	20 GHz	28	34		dB
Input Return Loss	20 GHz		15		dB
Output Return Loss	20 GHz		15		dB
Switching Speed <sup>1</sup>	10 GHz		50		nS

Typical switching speed is measured from 10% to 90% of detected RF voltage driven by a TTL compatible driver. Driver output parallel RC network uses a capacitor between 390pF – 560pF and a resistor between  $150\Omega$  –  $220\Omega$  to achieve 50nS rise and fall times.

# Operation of the MASW-004100-1193 Switch

The simultaneous application of negative DC current to the low loss port and positive DC current to the remaining isolated ports as shown in Figure 1 will operate the MASW-004100-1193 PIN diode switch. The backside metalized area of the die is the RF and DC return ground plane. The DC return is achieved on common Port J1. A current source should be used to supply the DC control currents. The voltages at these points will not exceed ±1.5 volts and are typically 1.2 volts for supply currents up to ± 20 mA. For the port in low loss state, the series diode must be forward biased and the shunt diode reverse biased. For all the isolated ports, the shunt diode is forward biased and the series diode is reverse biased. A typical bias network design which should provide >30 dB RF to DC isolation is shown in Figure 1. Best insertion loss, P1dB, IP3, and switching speed are achieved by using a voltage pull-up resistor in the DC return path, J1 (not shown). A minimum value of |-2V| is recommended at this return node and can be obtained using a standard, 65V, TTL controlled, PIN diode driver.

# **ASSEMBLY INSTRUCTIONS**

#### **Cleanliness**

The chip should be handled in a clean environment free of organic contamination.

#### **Electro-Static Sensitivity**

The MASW-004100-1193 PIN switch is ESD, Class 1A sensitive (HBM). The proper ESD handling procedures must be used.

#### Wire Bonding

Thermosonic wedge bonding using  $0.003^{\circ} \times 0.00025^{\circ}$  ribbon or  $0.001^{\circ}$  diameter gold wire is recommended. A stage temperature of  $150^{\circ}$ C and a force of 18 to 22 grams should be used. Ultrasonic energy, if necessary, should be adjusted to the minimum power required to achieve a good bond. RF wire and ribbon lengths should be kept as short as possible to minimize parasitic inductance.

# **Mounting**

These chips have Ti-Pt-Au back metal and can be mounted using 80Au/20Sn eutectic solder or electrically conductive Ag epoxy. Mounting surface must be flat and clean of oils and contaminants.

#### **Eutectic Die Attachment**

An 80/20 gold-tin eutectic solder preform is recommended with a work surface temperature of 255°C and a tool tip temperature of 265°C. When hot gas is applied, the tool tip temperature should be 290°C. The chip should not be exposed to temperatures greater than 320°C for more than 10 seconds. No more than 3 seconds should be required for the die attachment.

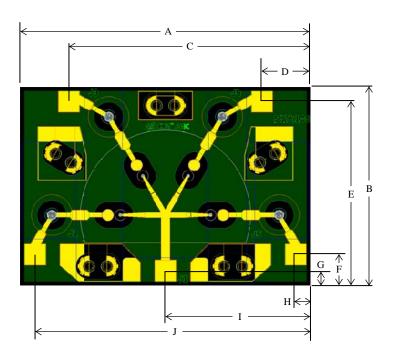

#### **Silver Epoxy Die Attachment**

Commitment to produce in volume is not guaranteed.

A controlled thickness of no more than 2 mils is recommended for the best electrical and thermal conductivity. A thin epoxy fillet should be visible around the perimeter of the chip after placement to ensure complete coverage. Cure epoxy per manufacturer's recommended schedule. Typically +150°C for 1 hour.

OOO «ЛайфЭлектроникс" "LifeElectronics" LLC

ИНН 7805602321 КПП 780501001 P/C 40702810122510004610 ФАКБ "АБСОЛЮТ БАНК" (ЗАО) в г.Санкт-Петербурге К/С 3010181090000000703 БИК 044030703

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

#### Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
