

**PULSE-WIDTH-MODULATION CONTROL CIRCUITS****AZ7500F****General Description**

The AZ7500F is a voltage mode pulse width modulation switching regulator control circuit designed primarily for power supply control.

The AZ7500F consists of a reference voltage circuit, two error amplifiers, an on-chip adjustable oscillator, a dead-time control (DTC) comparator, a pulse-steering control flip-flop, and an output control circuit. The precision of voltage reference ( $V_{REF}$ ) is improved up to  $\pm 1\%$  through trimming and this provides a better output voltage regulation. The AZ7500F provides for push-pull or single-ended output operation, which can be selected through the output control.

The AZ7500F is available in standard packages of DIP-16 and SOIC-16.

**Features**

- Stable 5V Reference Voltage Trimmed to  $\pm 1.0\%$  Accuracy
- Uncommitted Output TR for 200mA Sink or Source Current
- Single-End or Push-Pull Operation Selected by Output Control
- Internal Circuitry Prohibits Double Pulse at Either Output
- Complete PWM Control Circuit with Variable Duty Cycle
- On-Chip Oscillator With Master or Slave Operation

**Applications**

- SMPS
- Back Light Inverter
- Charger

Storage Temperature Range	$T_{STG}$	-65 to 150	$^{\circ}\text{C}$
ESD Rating (Machine Model)		200	V

Note 1: Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "Recommended Operating Conditions" is not implied. Exposure to "Absolute Maximum Ratings" for extended periods may affect device reliability.

Note 2: All voltage values are with respect to the network ground terminal.

Note 3: Maximum power dissipation is a function of  $T_J(\text{max})$ ,  $R_{\theta JA}$  and  $T_A$ . The maximum allowable power dissipation at any allowable ambient temperature is  $P_D = (T_J(\text{max}) - T_A) / R_{\theta JA}$ . Operating at the absolute maximum  $T_J$  of  $150^{\circ}\text{C}$  can affect reliability.
