#### Notes:

1. DC Interrupting Rating tested at rated voltage with time constant <0.5msec.
2. Nominal Resistance measured with <10% rated current.
3. Nominal Melting I<sup>2</sup>t measured at 1 msec. opening time. For other I<sup>2</sup>t data refer to chart.
4. Nominal Voltage Drop measured at rated current after temperature has stabilized and with fuse mounted on board with 3oz Cu trace.

Devices designed to carry rated current for four hours minimum. It is recommended that devices be operated continuously at no more than 80% rated current. See "Temperature Re-rating Curve" for additional re-rating information.

Devices designed to be mounted with marking code facing up.

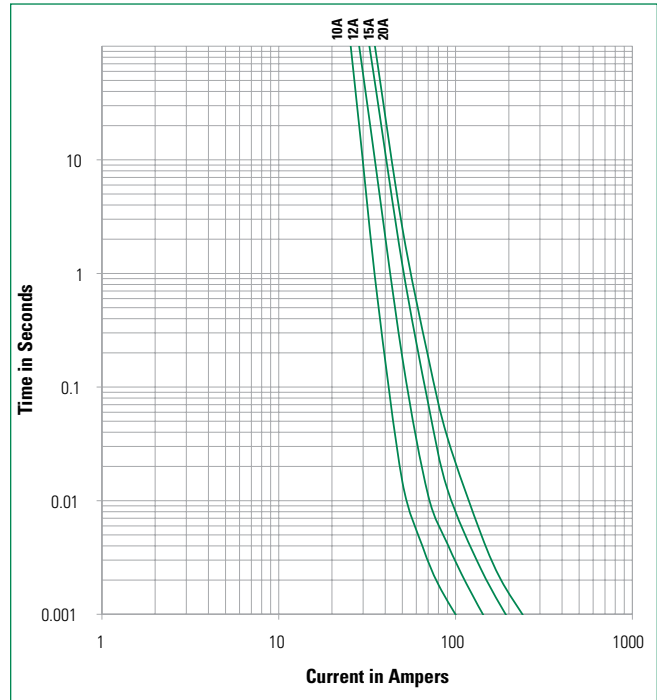

**Temperature Re-rating Curve**

**Note:**  
1. Re-rating depicted in this curve is in addition to the standard re-rating of 20% for continuous operation.

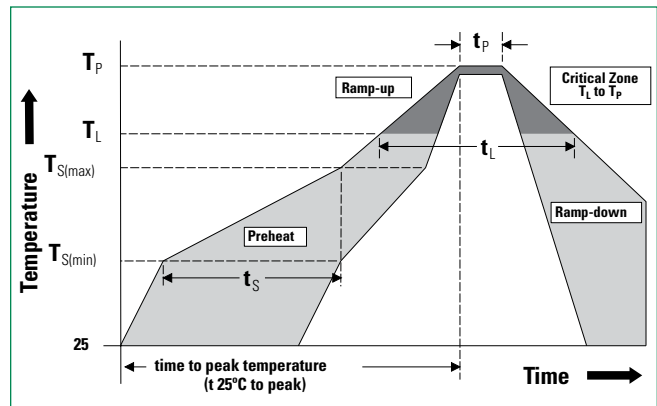

**Example:**  
For continuous operation at 75 degrees celsius, the fuse should be rerated as follows:  
 $I = (0.80)(0.85)_{\text{RAI}} = (0.68)_{\text{RAI}}$
