## DESCRIPTION

The SY58038U is a low jitter, low skew, high-speed 8:1 multiplexer with a 1:2 differential fanout buffer optimized for precision telecom and enterprise server distribution applications. The SY58038U distributes clock frequencies from DC to 3.5GHz, and data rates to 4.5Gbps guaranteed over temperature and voltage.

The SY58038U differential input includes Micrel's unique, 3-pin input termination architecture that directly interfaces to any differential signal (AC- or DC-coupled) as small as 100mV without any level shifting or termination resistor networks in the signal path. The outputs are 800mV, 100K compatible LVPECL with extremely fast rise/fall times guaranteed to be less than 100ps.

The SY58038U features a patent-pending isolation design that significantly improves channel-to-channel crosstalk performance.

The SY58038U operates from a 2.5V  $\pm 5\%$  or 3.3V  $\pm 10\%$  supply and is guaranteed over the full industrial temperature range of  $-40^\circ C$  to  $+85^\circ C$ . The SY58038U is part of Micrel's high-speed, Precision Edge™ product line.

Data sheets and support documentation can be found on Micrel's web site at [www.micrel.com](http://www.micrel.com).

**PIN DESCRIPTION**

Pin Number	Pin Name	Pin Function
20, 18, 16, 14, 13, 11, 9, 7, 5, 3, 1, 43, 42, 40, 38, 36	IN0, /IN0, IN1, /IN1, IN2, /IN2, IN3, /IN3, IN4, /IN4, IN5, /IN5, IN6, /IN6, IN7, /IN7	Differential Inputs: These input pairs are the differential signal inputs to the device. Inputs accept AC or DC-coupled signals as small as 100mV. Each pin of a pair internally terminates to a VT pin through 50ohms. Note that these inputs will default to an indeterminate state if left open. Please refer to the "Input Interface Applications" section for more details.
19,15, 12, 8, 4, 44, 41, 37	VT0, VT1 VT2, VT3, VT4, VT5, VT6, VT7	Input Termination Center-Tap: Each side of the differential input pair terminates to a VT pin. The VT pins provide a center-tap to a termination network for maximum interface flexibility. See "Input Interface Applications" section for more details. For a CML or LVDS inputs, the VT pin is left floating.
17, 10, 2 39	VREF-AC0, VREF-AC1, VREF-AC2, VREF-AC3	Reference Voltage: This output biases to $V_{CC}-1.2\text{V}$ . It is used when AC coupling the inputs (IN, /IN). For AC-coupled applications, connect VREF_AC to the VT pin and bypass with a 0.01µF low ESR capacitor to $V_{CC}$ . See "Input Interface Applications" section for more details.
21, 22, 35	SEL0, SEL1, SEL2	The single-ended TTL/CMOS-compatible inputs select the inputs to the multiplexer. Note that this input is internally connected to a 25kohms pull-up resistor and will default to a logic HIGH state if left open.
24, 27, 29, 32	VCC	Positive Power Supply. Bypass with 0.1µF//0.01µF low ESR capacitors as close to each VCC pin.
25, 26, 30, 31	Q0,/Q0, Q1,/Q1	Differential Outputs: These LVPECL output pairs are the outputs of the device. Unused output pairs may be left open. Each output is designed to drive 800mV into 50ohms terminated to $V_{CC}-2\text{V}$ .(or $V_{CC}-1.2\text{V}$ if AC-coupled).
23, 28, 33	GND, Exposed Pad	Ground. GND and exposed pad must both be connected to the most negative potential of chip ground.
