

QUICK START GUIDE FOR DEMONSTRATION CIRCUIT 432

HIGH EFFICIENCY SYNCHRONOUS STEP-DOWN REGULATOR

LTC1875 or LTC1879

DESCRIPTION

Demonstration circuit 432 is a step-down converter, featuring either the LTC1875 or LTC1879 high frequency monolithic switching regulators. With an input voltage range from 2.65V to 6V, the LTC1875 is ideal for Li-Ion applications, such as PDAs, cellular phones, and digital cameras. For applications with higher input voltages, the LTC1879 is the choice with its maximum input voltage limit of 10V. Both devices have switch current limits over 1A (LTC1875-1.6A, LTC1879-1.8A), which allows these

ICs to deliver high(er) power to small, low-profile applications. While the standard operating frequency of both parts is 550 kHz, the switching can be externally set as high as 750 kHz. All these features make the LTC1879 (DC432A) or LTC1875 (DC432B) perfectly suited for battery-powered, surface mount applications.

Design files for this circuit board are available. Call the LTC factory.

Table 1. Performance Summary

PARAMETER	CONDITION	VALUE
Minimum Input Voltage		2.65V
Maximum Input Voltage (LTC1875) Maximum Input Voltage (LTC1879)		6V 10V
V_{OUT} (LTC1875) V_{OUT} (LTC1879)	$I_{OUT} = 0A$ to 1.5A $I_{OUT} = 0A$ to 1.2A	$0.8V \pm 2\%$ to $V_{IN} \pm 2\%$ $0.8V \pm 2\%$ to $V_{IN} \pm 2\%$
I_{OUT} (LTC1875) I_{OUT} (LTC1879)		1.5A 1.2A
Nominal Switching Frequency		550kHz

QUICK START PROCEDURE

Demonstration circuit 432 is easy to set up to evaluate the performance of the LTC1875 or LTC1879. Refer to Figure 1 for proper measurement equipment setup and follow the procedure below:

When measuring the input or output voltage ripple, care must be taken to avoid a long ground lead on the oscilloscope probe. Measure the input or output voltage ripple by touching the probe tip directly across the Vin or Vout and GND terminals. Refer to Figure 2 for proper placement of the scope probe.

1. Place jumper JP2 in the SHDN position.
2. Select the desired output voltage, using jumper JP3. The fixed output options are 1.8V, 2.5V, and 3.3V. To set the output voltage to a custom value, insert a resistor into RFB5.

3. Connect the load between the Vout and GND terminals on the bottom right-side of the board.
4. With power off, connect the input power supply to Vin and GND (which are at the bottom left-side of the board). Turn on the power at the input.

NOTE: If evaluating the LTC1875, do not exceed 6V input; if evaluating the LTC1879, do not exceed 10V in.

5. Place jumper JP2 in the RUN position.
6. Check for the proper output voltages.
If there is no output, temporarily disconnect the load to make sure that the load is not set too high.
7. Once the proper output voltages are established, adjust the loads within the operating range and observe the output voltage regulation, ripple voltage, efficiency and other parameters.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
