

## 3 band car audio processor

### Features

- 4 stereo inputs
- Soft-step volume
- Bass, middle, treble and loudness
- Direct mute and soft-mute
- Four independent speaker outputs
- Sub woofer output
- Soft-step speaker/subwoofer control
- 7 bands spectrum analyzer
- Digital control:
  - I<sup>2</sup>C bus interface

### Description

The TDA7419 is a high performance signal processor specifically designed for car radio applications. The device includes a high performance audioprocessor with fully integrated audio filters.

The digital control allows programming in a wide range of filter characteristics. By the use of BICMOS-process and linear signal processing low distortion and low noise are obtained.

**Table 1. Device summary**

Order code	Package	Packing
TDA7419	SO-28	Tube
TDA7419TR	SO-28	Tape and reel

## 4 Description of the audio processor

### 4.1 Audio processor features

- Input Multiplexer
  - QD / SE: quasi-differential stereo inputs, with selectable single-ended mode
  - SE1: stereo single-ended input
  - SE2: stereo single-ended input
  - SE3 / AC2IN: stereo single-ended input / HPF filter input
  - In-Gain 0 to 15dB, 1dB steps
  - internal offset-cancellation (AutoZero)
  - separate second source-selector
- Mixing stage
  - mixable to front speaker-outputs
- Loudness
  - 2<sup>nd</sup> order frequency response
  - programmable center frequency (400Hz/800Hz/2400Hz)
  - 15 dB with 1 dB steps
  - selectable low and high frequency boost
  - selectable flat-mode (constant attenuation)
- Volume
  - +15 dB to -79 dB with 1 dB step resolution
  - soft-step control with programmable blend times
- Bass
  - 2<sup>nd</sup> order frequency response
  - center frequency programmable in 4 steps (60 Hz/80 Hz/100 Hz/200 Hz)
  - Q programmable 1.0/1.25/1.5/2.0
  - DC gain programmable
  - -15 to 15 dB range with 1 dB resolution
- Middle
  - 2<sup>nd</sup> order frequency response
  - center frequency programmable in 4 steps (500Hz/1KHz/1.5KHz/2.5KHz)
  - Q programmable 0.5/0.75/1.0/1.25
  - DC gain programmable
  - -15 to 15dB range with 1dB resolution
- Treble
  - 2<sup>nd</sup> order frequency response
  - center frequency programmable in 4 steps (10KHz/12.5KHz/15KHz/17.5KHz)
  - -15 to 15dB range with 1dB resolution
- Spectrum analyzer
  - seven bandpass filters
  - 2<sup>nd</sup> order frequency response

- programmable Q factor for different visual appearance
- analog output
- controlled by external serial clock
- Speaker
  - 4 independent soft-step speaker controls, +15dB to -79dB with 1dB steps
  - Independent programmable mix input with 50% mixing ratio for front speakers
  - direct mute
- Subwoofer
  - 2nd order low pass filter with programmable cut off frequency
  - single-ended mono output independent soft-step level control, +15dB to -79dB with 1dB steps
- Mute functions
  - direct mute
  - digitally controlled Soft-mute with 3 programmable mute-times(0.48ms/0.96ms/123ms)
- Effect
  - gain effect, or high pass effect with fixed external components

## 4.2 Input stages

In the basic configuration, one stereo quasi-differential and three (two in case of HPS applications) single ended stereo inputs are available.

### 4.2.1 Quasi-differential stereo input (QD)

The QD input is implemented as a buffered quasi-differential stereo stage with 100 k $\Omega$  input-impedance at each input. The attenuation is fixed to -3 dB in order to adapt the incoming signal level.

### 4.2.2 Single-ended stereo input (SE1, SE2, SE3/AC2IN)

The input impedance at each input is 100 k $\Omega$  and the attenuation is fixed to -3dB for incoming signals. The input for SE3 is also configurable as part of the interface for external filters in HPS applications (AC2IN)

**Figure 3. Input stage**

### 4.3 AutoZero

The AutoZero allows a reduction of the number of pins as well as external components by canceling any offset generated by or before the In-Gain-stage (Please notice that externally generated offsets, e.g. generated through the leakage current of the coupling capacitors, are not canceled).

The auto-zeroing is started every time the input source is changed and needs max. 0.3ms for the alignment. To avoid audible clicks the Audio processor is muted before the loudness stage during this time. The AutoZero feature is only present in the main signal-path.

#### 4.3.1 AutoZero remain

In some cases, for example if the  $\mu P$  is executing a refresh cycle of the I<sup>2</sup>C bus programming, it is not useful to start a new AutoZero action because no new source is selected and an undesired mute would appear at the outputs. For such applications, it can be switched in the AutoZero remain mode (bit 6 of the subaddress byte). If this bit is set to high, the AutoZero will not be invoked and the old adjustment-value remains.

### 4.4 Loudness

There are four parameters programmable in the loudness stage:

#### 4.4.1 Attenuation

*Figure 4* shows the attenuation as a function of frequency at  $f_p = 400$  Hz

Figure 4. Loudness attenuation @  $f_p = 400$  Hz.

### 4.4.2 Peak frequency

Figure 5 shows the three possible peak frequencies 400 Hz, 800 Hz and 2.4 kHz.

Figure 5. Loudness center frequencies @ Attn. = 15 dB

### 4.4.3 Low and high frequency boost

*Figure 6* shows the different loudness shapes in low and high frequency boost.

**Figure 6. Loudness attenuation,  $f_c = 2.4$  kHz**

### 4.4.4 Flat mode

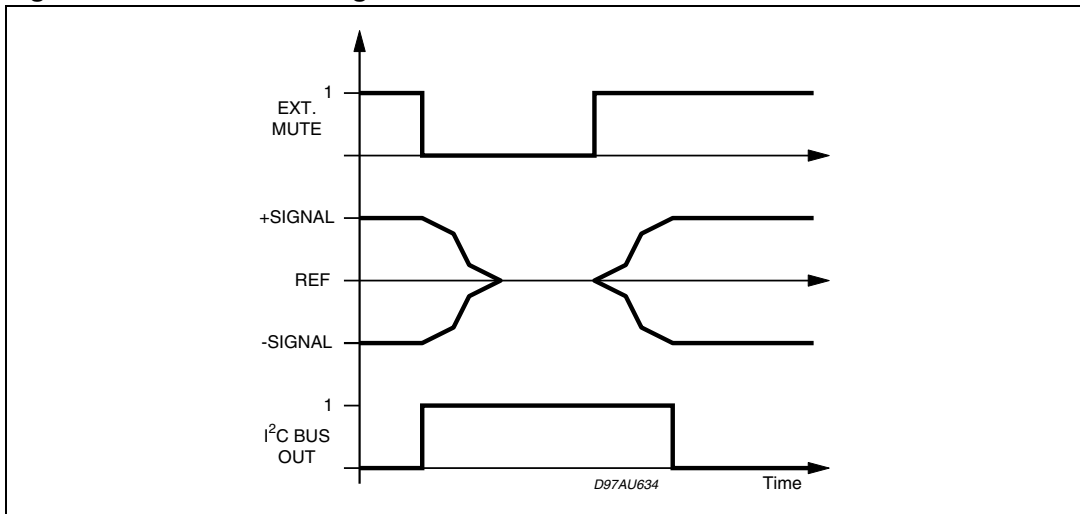

In flat mode the loudness stage works as a 0 dB to -15 dB attenuator.

## 4.5 Soft-mute

The digitally controlled soft-mute stage allows muting/demuting the signal with a I<sup>2</sup>C bus programmable slope. The mute process can either be activated by the soft-mute pin or by the I<sup>2</sup>C bus. This slope is realized in a special S-shaped curve to mute slow in the critical regions (see *Figure 7*).

For timing purposes the bit 0 of the I<sup>2</sup>C bus output register is set to 1 from the start of muting until the end of demuting.

**Figure 7. Soft-mute timing**

1. Please notice that a started mute-action is always terminated and could not be interrupted by a change of the mute -signal

### 4.5.1 Soft-step volume

When the volume level is changed audible clicks could appear at the output. The root cause of those clicks

could either be a DC-Offset before the volume-stage or the sudden change of the envelope of the audiosignal. With the soft-step feature both kinds of clicks could be reduced to a minimum and are no more audible. The blend-time from one step to the next is programmable in four steps.

**Figure 8. Soft-step timing**

1. For steps more than 0.5dB the Soft-step mode should be deactivated because it could generate a hard 1dB step during the blend-time.

### 4.6 Bass

There are four parameters programmable in the bass stage:

### 4.6.1 Attenuation

*Figure 9* shows the attenuation as a function of frequency at a center frequency of 80 Hz.

**Figure 9. Bass control @  $f_C = 80$  Hz,  $Q = 1$**

### 4.6.2 Center frequency

Figure 10 shows the four possible center frequencies 60, 80, 100 and 200 Hz.

Figure 10. Bass center frequencies @ gain = 15 dB, Q = 1

### 4.6.3 Quality factors

Figure 11 shows the four possible quality factors 1, 1.25, 1.5 and 2.

Figure 11. Bass quality factors @ gain = 14 dB,  $f_C = 80$  Hz

### 4.6.4 DC mode

It is used for cut only for shelving filter. In this mode the DC gain is increased by 4.4 dB. In addition the programmed center frequency and quality factor is decreased by 25 % which can be used to reach alternative center frequencies or quality factors.

**Figure 12. Bass normal and DC mode @ gain = 14 dB,  $f_C = 80$  Hz**

1. The center frequency, Q and DC-mode can be set fully independently.

## 4.7 Middle

There are three parameters programmable in the middle stage:

### 4.7.1 Attenuation

*Figure 13* shows the attenuation as a function of frequency at a center frequency of 1 kHz.

**Figure 13. Middle control @  $f_C = 1$  kHz,  $Q = 1$**

### 4.7.2 Center frequency

Figure 14 shows the four possible center frequencies 500 Hz, 1 kHz, 1.5 kHz and 2.5 kHz.

**Figure 14. Middle center frequencies @ gain = 14 dB, Q = 1**

### 4.7.3 Quality factors

*Figure 15* shows the four possible quality factors 0.5, 0.75, 1 and 1.25.

**Figure 15. Middle quality factors @ gain = 14 dB, fc = 1 kHz**

### 4.8 Treble

There are two parameters programmable in the treble stage:

#### 4.8.1 Attenuation

Figure 16 shows the attenuation as a function of frequency at a center frequency of 17.5 kHz.

Figure 16. Treble control @  $f_c = 17.5$  kHz

#### 4.8.2 Center frequency

Figure 17 shows the four possible center frequencies 10k, 12.5k, 15k and 17.5 kHz.

Figure 17. Treble center frequencies @ gain = 15 dB

### 4.9 Subwoofer filter

The subwoofer lowpass filter has butterworth characteristics with programmable cut-off frequency (80/120/160 Hz)

Figure 18. Subwoofer control

### 4.10 Spectrum analyzer

A fully integrated seven-band spectrum analyzer with programmable quality factor is present. The spectrum analyzer consists of seven band pass filters with rectifier and sample capacitor that stores the maximum peak signal level since the last read cycle. This peak signal level can be read by a microprocessor at the SAout pin. To allow easy interfacing to an analog port of the microprocessor, the output voltage at this pin is referred to device ground.

The microprocessor starts a read cycle with the negative going clock edge at the SAck input. On the following positive clock edges, the peak signal level for the band pass filters is subsequently switched to SAout. Each analog output data is valid after the time  $t_{Sadel}$ . A reset of the sample capacitors is induced whenever SAck remains high for the time  $t_{intres}$ . Note that a proper reset requires the clock signal SAck to be held at high potential. Figure 20 shows the block diagram and figure 21 illustrates the read cycle timing of the spectrum analyzer.

Figure 19. Spectrum analyzer block diagram

Figure 20. Timing of the spectrum analyzer

### 4.11 AC coupling

In some applications additional signal manipulations are desired, such as additional band equalizations. For this purpose, an AC coupling can be placed before the loudness attenuator or speaker-attenuators, which can be activated or internally shorted by I<sup>2</sup>C bus. In short condition, the input-signal of the speaker-attenuator is available at the AC outputs. The input-impedance of this AC inputs is 50 k $\Omega$ .

Figure 21. Diagram of AC coupling

### 4.12 HPF applications

For HPF applications, HPF filter is available for additional processing after the speaker control. It is a 2<sup>nd</sup> order butterworth highpass filter with selectable flat mode. *Figure 22* shows the diagram of the HPF that includes an external RC network.

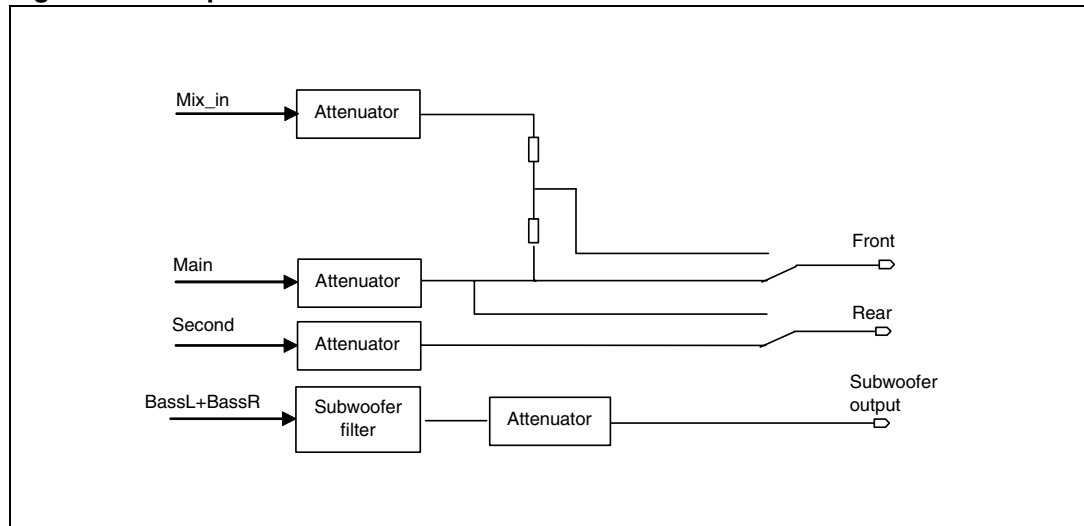

**Figure 22. HPF diagram**

### 4.13 Output selector and mixing

The output-selector allows the front and rear speakers to connect to different sources. The setup of the output selector is shown in Figure 24. A Mixing-stage is placed after the front speaker-attenuator and can be set to mixing-mode. Having a full volume-attenuator for the mix-signal, the stage offers a wide flexibility to adapt the mixing levels.

**Figure 23. Output selector**

### 4.14 Audioprocessor testing

In the test mode, which can be activated by setting bit D7 of the IIC subaddress byte and bit D0 of the testing audioprocessor byte, several internal signals are available at the SE1R pin. In this mode, the input resistance of 100kOhm is disconnected from the pin. Internal signals available for testing are listed in the data-byte specification.

### 4.15 Test circuit

Figure 24. Test circuit

## 5 I<sup>2</sup>C bus specification

### 5.1 Interface protocol

The interface protocol comprises:

- a start condition (S)
- a chip address byte (the LSB determines read/write transmission)
- a subaddress byte
- a sequence of data (N-bytes + acknowledge)
- a stop condition (P)
- the max. clock speed is 500 kbits/s
- 3.3 V logic compatible

#### 5.1.1 Receive mode

S	1	0	0	0	1	0	0	R/W	ACK	TS	AZ	AI	A4	A3	A2	A1	A0	ACK	DATA	ACK	P
---	---	---	---	---	---	---	---	-----	-----	----	----	----	----	----	----	----	----	-----	------	-----	---

S = Start

R/W = "0" -> Receive Mode (Chip can be programmed by  $\mu$ P)

"1" -> Transmission Mode (Data could be received by  $\mu$ P)

ACK = Acknowledge

P = Stop

TS = Testing mode

AZ = AutoZero remain

AI = Auto increment

#### 5.1.2 Transmission mode

S	1	0	0	0	1	0	0	R/W	ACK	X	X	X	X	X	X	X	X	SM	ACK	P
---	---	---	---	---	---	---	---	-----	-----	---	---	---	---	---	---	---	---	----	-----	---

SM = Soft-mute activated for main channel

X = Not Used

The transmitted data is automatic updated after each ACK. Transmission can be repeated without new chip address.

#### 5.1.3 Reset condition

A Power on reset is invoked if the supply voltage is below than 3.5 V. After that the following data is written automatically into the registers of all subaddresses:

MSB								LSB
1	1	1	1	1	1	1	0	

## 5.2 Subaddress (receive mode)

Table 7. Subaddress (receive mode)

MSB							LSB	Function

## 6 Package information

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK<sup>®</sup> packages, depending on their level of environmental compliance. ECOPACK<sup>®</sup> specifications, grade definitions and product status are available at: [www.st.com](http://www.st.com).

ECOPACK<sup>®</sup> is an ST trademark.

**Figure 25. SO-28 mechanical data and package dimensions**

## 7 Revision history

**Table 20. Document revision history**

Date	Revision	Changes
20-Nov-2004	1	Initial release.
16-Mar-2005	2	Inserted new values in electrical characteristics table.
10-Jun-2005	3	Modified the figure 2 block diagram.
08-Oct-2005	4	Minor correction
13-Dec-2005	5	Updated "Absolute maximum ratings" table 3 and "Supply" table 2.
13-Feb-2009	6	Document reformatted. Updated <a href="#">Section 6: Package information on page 38</a> .
24-Sep-2013	7	Updated disclaimer.

**Please Read Carefully:**

Information in this document is provided solely in connection with ST products. STMicroelectronics NV and its subsidiaries ("ST") reserve the right to make changes, corrections, modifications or improvements, to this document, and the products and services described herein at any time, without notice.

All ST products are sold pursuant to ST's terms and conditions of sale.

Purchasers are solely responsible for the choice, selection and use of the ST products and services described herein, and ST assumes no liability whatsoever relating to the choice, selection or use of the ST products and services described herein.

No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted under this document. If any part of this document refers to any third party products or services it shall not be deemed a license grant by ST for the use of such third party products or services, or any intellectual property contained therein or considered as a warranty covering the use in any manner whatsoever of such third party products or services or any intellectual property contained therein.

**UNLESS OTHERWISE SET FORTH IN ST'S TERMS AND CONDITIONS OF SALE ST DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY WITH RESPECT TO THE USE AND/OR SALE OF ST PRODUCTS INCLUDING WITHOUT LIMITATION IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE (AND THEIR EQUIVALENTS UNDER THE LAWS OF ANY JURISDICTION), OR INFRINGEMENT OF ANY PATENT, COPYRIGHT OR OTHER INTELLECTUAL PROPERTY RIGHT.**

**ST PRODUCTS ARE NOT DESIGNED OR AUTHORIZED FOR USE IN: (A) SAFETY CRITICAL APPLICATIONS SUCH AS LIFE SUPPORTING, ACTIVE IMPLANTED DEVICES OR SYSTEMS WITH PRODUCT FUNCTIONAL SAFETY REQUIREMENTS; (B) AERONAUTIC APPLICATIONS; (C) AUTOMOTIVE APPLICATIONS OR ENVIRONMENTS, AND/OR (D) AEROSPACE APPLICATIONS OR ENVIRONMENTS. WHERE ST PRODUCTS ARE NOT DESIGNED FOR SUCH USE, THE PURCHASER SHALL USE PRODUCTS AT PURCHASER'S SOLE RISK, EVEN IF ST HAS BEEN INFORMED IN WRITING OF SUCH USAGE, UNLESS A PRODUCT IS EXPRESSLY DESIGNATED BY ST AS BEING INTENDED FOR "AUTOMOTIVE, AUTOMOTIVE SAFETY OR MEDICAL" INDUSTRY DOMAINS ACCORDING TO ST PRODUCT DESIGN SPECIFICATIONS. PRODUCTS FORMALLY ESCC, QML OR JAN QUALIFIED ARE DEEMED SUITABLE FOR USE IN AEROSPACE BY THE CORRESPONDING GOVERNMENTAL AGENCY.**

Resale of ST products with provisions different from the statements and/or technical features set forth in this document shall immediately void any warranty granted by ST for the ST product or service described herein and shall not create or extend in any manner whatsoever, any liability of ST.

[www.st.com](http://www.st.com)

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкуренспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
