GENERAL DESCRIPTION

The **ADG621** is a monolithic, CMOS, single-pole, single-throw (SPST) switch. The **ADG621** conducts equally well in both directions when on. The **ADG621** contains two independent switches. The **ADG621** is a normally open switch.

The **ADG621** offers low on resistance of 4 Ω , which is matched to within 0.25 Ω between channels. The **ADG621** also provides low power dissipation yet offers high switching speeds.

All digital inputs have 0.8 V to 2.4 V logic thresholds, ensuring TTL/CMOS compatibility when using single +5 V or dual ± 5 V supplies. The **ADG621** is available in a 10-lead MSOP package.

² The device is fully specified at $\pm 5\text{ V}$ dual supply and at $+5\text{ V}$ single supply only. It is possible to operate the ADG621 with unbalanced supplies or at other voltage supplies ($\pm 2.7\text{ V}$ to $\pm 5.5\text{ V}$ dual supply, and $+2.7\text{ V}$ to $+5.5\text{ V}$ single supply); however, the switch characteristics change. These changes include, but are not limited to, analog signal range, on resistance, leakage, V_{INL} , V_{INH} , and switching times. The optimal power-up sequence for the device is ground, V_{DD} , V_{SS} , and then the digital inputs, before applying the analog input signal.

² Overvoltages at INx, S, or D must be clamped by internal diodes. Limit currents to the maximum ratings given.

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

Only one absolute maximum rating can be applied at any one time.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.
