

Micropower quad CMOS voltage comparators

Datasheet - production data

Related products

- Pin-to-pin and functionally compatible with the dual CMOS TS3704 comparators
- See TSX339 for open drain output

Applications

- Automotive
- Industrial

Description

The TSX3704 is a micropower CMOS quad voltage comparator which exhibits a very low current consumption of 5 μ A typical per comparator. This device was designed as the improvement of the TS3704: it shows a lower current consumption, a better input offset voltage, and an enhanced ESD tolerance. The TSX3704 is fully specified over a wide temperature range and is proposed in automotive grade for the TSSOP14 package. It is fully compatible with the TS3704 CMOS comparator and is available with similar packages. The new tiny package, QFN16 3x3, is also proposed for the TSX3704 thus allowing even more integration on applications.

Features

- Low supply current: 5 μ A typ. per comparator
- Wide single supply range 2.7 V to 16 V or dual supplies (± 1.35 V to ± 8 V)
- Extremely low input bias current: 1 pA typ.
- Input common-mode voltage range includes ground
- Push-pull output
- High input impedance: 10^{12} Ω typ
- Fast response time: 2.7 μ s typ. for 5 mV overdrive
- ESD tolerance: 4 kV HBM, 200 V MM

3 Absolute maximum ratings and operating conditions

Table 1: Absolute maximum ratings (AMR)

| Symbol | Parameter | Value | Unit | |
|------------|---|------------|------|------|
| V_{CC}^+ | Supply voltage ⁽¹⁾ | 18 | V | |
| V_{id} | Differential input voltage ⁽²⁾ | ±18 | | |
| V_{in} | Input voltage | -0.3 to 18 | | |
| V_o | Output voltage | 18 | | |
| I_o | Output current | 20 | mA | |
| I_F | Forward current in ESD protection diodes on inputs ⁽³⁾ | 50 | | |
| T_j | Maximum junction temperature | 150 | °C | |
| T_{stg} | Storage temperature range | -65 to 150 | | |
| R_{thja} | Thermal resistance junction to ambient ⁽⁴⁾ | SO14 | 105 | °C/W |
| | | TSSOP14 | 100 | |
| | | QFN16 3x3 | 39 | |
| ESD | HBM: human body model ⁽⁵⁾ | 4000 | V | |
| | MM: machine model ⁽⁶⁾ | 200 | | |
| | CDM: charged device model ⁽⁷⁾ | 1500 | | |
| | Latch-up immunity | 200 | mA | |

Notes:

- ⁽¹⁾All voltage values, except the differential voltage, are with respect to network ground terminal
- ⁽²⁾Differential voltages are the non-inverting input terminal with respect to the inverting input terminal
- ⁽³⁾Guaranteed by design
- ⁽⁴⁾Short-circuits can cause excessive heating and destructive dissipation. Values are typical
- ⁽⁵⁾According to JEDEC standard JESD22-A114F
- ⁽⁶⁾According to JEDEC standard JESD22-A115A
- ⁽⁷⁾According to ANSI/ESD STM5.3.1

Table 2: Operating conditions

| Symbol | Parameter | Value | Unit |
|-----------------|--------------------------------------|-------------------------|------|
| V_{CC}^+ | Supply voltage | 2.7 to 16 | V |
| $V_{icm}^{(1)}$ | Common mode input voltage range | 0 to $(V_{CC}^+) - 1.5$ | |
| | $T_{min} \leq T_{amb} \leq T_{max}$ | 0 to $(V_{CC}^+) - 2$ | |
| T_{oper} | Operating free-air temperature range | -40 to 125 | °C |

Notes:

- ⁽¹⁾The output state is guaranteed as long as one input remains with this common mode input voltage range, and the other input remains between -0.3 V and 16 V (meaning that one input can be driven above V_{CC}^+).

4 Electrical characteristics

Table 3: $V_{CC+} = 3\text{ V}$, $V_{CC-} = 0\text{ V}$, $T_{amb} = 25\text{ }^{\circ}\text{C}$ (unless otherwise specified)

6 Application information

6.1 Input voltages

The output state is guaranteed as long as one input remains within the common mode input voltage range (defined in the operating conditions table), and the other input remains between -0.3 V and 16 V (meaning that one input can be driven above VCC+).

If one input voltage is beyond the range 0 V to 16 V, this input of the comparator should be protected according to [Figure 17](#).

If the input is lower than Vcc-, a significant current may go through the ESD diode. To protect the circuit, this current must be limited to 10 mA by using the Rg+ or Rg- resistors.

If the input is bigger than 16 V, it has to be voltage limited. This is achieved using the D- or D+ additional, external diodes. To protect these diodes, the current is limited using the Rg resistor. D- and D+ diodes can be connected to another power supply with a maximum value of 16 V. The device is designed to prevent phase reversal.

Figure 17: Additional, external, protection schematic

6.2 For unused channel

An unused comparator has to be configured to avoid unexpected additional consumption. A simple solution is to connect the input to the power supply pins as shown in [Figure 18](#). This keeps the circuit in a stable state.

Figure 18: Input configuration for unused channel

6.3 Bypass capacitor

To maintain proper coupling of the power supply, it is strongly recommended to place a 0.1 μF capacitor as close as possible to the supply pins.

7 Package information

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK[®] packages, depending on their level of environmental compliance. ECOPACK[®] specifications, grade definitions and product status are available at: www.st.com. ECOPACK[®] is an ST trademark.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
