74HC/HCT594

8-bit shift register with output register

Product specification
File under Integrated Circuits, IC06

December 1991

8-bit shift register with output register

74HC/HCT594

FEATURES

- Synchronous serial input and output
- 8-bit parallel output
- Shift and storage register have independent direct clear and clocks
- 100 MHz (typ.)
- Output capability:
 - parallel outputs: bus driver
 - serial outputs: standard
- I_{CC} category: MSI

APPLICATIONS

- Serial-to parallel data conversion
- Remote control holding register

DESCRIPTION

The 74HC/HCT594 are high-speed, Si-gate CMOS devices, and are pin compatible with low power Schottky TTL (LSTTL). They are specified in compliance with JEDEC standard No. 7A.

The 74HC/HCT594 contain an 8-bit, non-inverting, serial-in, parallel-out shift register that feeds an 8-bit D-type storage register. Separate clocks and direct overriding clears are provided on both the shift and storage registers. A serial output (Q_7') is provided for cascading purposes.

Both the shift and storage register clocks are positive-edge triggered. If the user wishes to connect both clocks together, the shift register will always be one count pulse ahead of the storage register.

QUICK REFERENCE DATA

GND = 0 V; $T_{amb} = 250\text{ }^{\circ}\text{C}$; $t_r = t_f = 6\text{ ns}$.

SYMBOL	PARAMETER	CONDITIONS	TYPICAL		UNIT
			HC	HCT	
t_{PHL}/t_{PLH}	propagation delay SH_{CP} to Q_7'	$C_L = 15\text{ pF}$; $V_{CC} = 5\text{ V}$	13	15	ns
	ST_{CP} to Q_n		13	15	ns
	$\overline{SH}_R$ to Q_n		11	14	ns
	$\overline{ST}_R$ to Q_n		11	14	ns
f_{max}	maximum clock frequency SH_{CP} , ST_{CP}		100	100	MHz
C_I	input capacitance		3.5	3.5	pF
C_{PD}	power dissipation capacitance per package	notes 1 and 2	84	89	pF

Notes

- C_{PD} is used to determine the dynamic power dissipation (P_D in μW).
 $P_D = C_{PD} \times V_{CC}^2 \times f_i + \sum (C_L \times V_{CC}^2 \times f_o)$, where:
 f_i = input frequency in MHz; f_o = output frequency in MHz;
 $\sum (C_L \times V_{CC}^2 \times f_o)$ = sum of the outputs;
 C_L = output load capacitance in pF; V_{CC} = supply voltage in V.
- For HC, the condition is $V_I = \text{GND to } V_{CC}$; for HCT, the condition is $V_I = \text{GND to } V_{CC} - 1.5\text{ V}$.

ORDERING INFORMATION

EXTENDED TYPE NUMBER	PACKAGES			
	PINS	PIN POSITION	MATERIAL	CODE

Fig.4 Functional diagram.

FUNCTION TABLE

INPUTS					OUTPUTS		FUNCTION
SH _{CP}	ST _{CP}	SH _R	ST _R	D _S	Q ₇ '	Q _n	
X	X	L	X	X	L	NC	a LOW level on SH _R only affects the shift registers.
X	X	X	L	X	NC	L	a LOW level on ST _R only affects the storage registers.
X	↑	L	H	X	L	L	empty shift register loaded into storage register.
↑	X	H	X	H	Q ₆ '	NC	logic HIGH level shifted into shift register stage 0. Contents of all shift register stages shifted through, e.g. previous state of stage 6 (internal Q ₆ ') appears on the serial output (Q ₇ ').
X	↑	H	H	X	NC	Q _n '	contents of shift register stages (internal Q _n ') are transferred to the storage register and parallel output stages.
↑	↑	H	H	X	Q _{6n}	Q _n '	contents of shift register shifted through. Previous contents of shift register transferred to the storage register and the parallel output stages.

Note

1.
- H = HIGH voltage level
- L = LOW voltage level
- ↑ = LOW-to-HIGH transition
- NC = no change
- X = don't care.

DC CHARACTERISTICS FOR 74HC

For the DC characteristics, see *"74HC/HCT/HCU/HCMOS Logic Family Specifications"*.

Output capability: parallel outputs, bus driver; serial output, standard.

I_{CC} category: MSI.

AC CHARACTERISTICS FOR 74HC

GND = 0 V; t_r = t_f = 6 ns; C_L = 50 pF.

DC CHARACTERISTICS FOR 74HCT

For the DC characteristics, see *"74HC/HCT/HCU/HCMOS Logic Family Specifications"*.

Output capability: parallel outputs, bus driver; serial output, standard.

I_{CC} category: MSI.

Note to HCT types

The value of additional quiescent supply current (ΔI_{CC}) for a unit load of 1 is given in the family specifications. To determine ΔI_{CC} per input, multiply this value by the unit load coefficient shown in the following table.

INPUT	UNIT LOAD COEFFICIENT
D_S	0.25
$\overline{SH}_R$	1.50
SH_{CP}	1.50
ST_{CP}	1.50
$\overline{ST}_R$	1.50

AC CHARACTERISTICS FOR 74HCT

PACKAGE OUTLINES

See "74HC/HCT/HCU/HCMOS Logic Package Outlines".

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
