

Dual Equalized 1.5/3.0/6.0 GT/s SAS/SATA Redriver

MAX4952A

General Description

The MAX4952A dual-channel redriver is designed to redrive one full lane of SAS or SATA signals up to 6.0GT/s (gigatransfers per second) and operates from a single +3.3V supply.

The MAX4952A features independent input equalization and output preemphasis. The MAX4952A enhances signal integrity at the receiver by equalizing the signal at the input and establishing preemphasis at the output of the device. SAS and SATA OOB (Out-of-Band) signaling is supported using high-speed amplitude detection on the inputs and squelch on the corresponding outputs.

Inputs and outputs are all internally 50Ω terminated and must be AC-coupled to the SAS/SATA controller IC and SAS/SATA device.

The MAX4952A is available in a small 28-pin, 3.5mm x 5.5mm TQFN package with flowthrough traces for ease of layout. This device is specified over the 0°C to +70°C operating temperature range.

Features

- ◆ Single +3.3V Supply Operation
- ◆ SAS Gen I/II Up to 6.0GT/s
- ◆ Excellent Return Loss
8dB at 3.0GT/s
- ◆ Supports SAS/SATA OOB (Out-of-Band) Signaling
Very Fast Entry and Exit Time
5ns (typ)
- ◆ Internal Input/Output 50Ω Termination Resistors
- ◆ Selectable Input Equalization
0, 3dB
- ◆ Standard 1000mVp-p (typ) Output
- ◆ Selectable Output Preemphasis
0, 3dB
- ◆ Inline Signal Traces for Flowthrough Layout
- ◆ Space-Saving, 3.5mm x 5.5mm TQFN Package

Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Dual Equalized 1.5/3.0/6.0 GT/s SAS/SATA Redriver

Detailed Description

The MAX4952A consists of two identical redrivers with input equalization and output preemphasis useful for SAS or SATA signals up to 6.0GT/s.

Input/Output Terminations

Inputs and outputs are internally 50Ω terminated to V_{CC} (see the *Functional Diagram*) and must be AC-coupled using 12nF (max) capacitors to the SAS/SATA controller IC and SAS/SATA device for proper operation.

Enable Input (EN)

The MAX4952A features an active-high enable input (EN). EN has an internal pulldown resistor of 70kΩ (typ). When EN is driven low or left unconnected, the MAX4952A enters low-power standby mode and the redrivers are disabled. Drive EN high for normal operation.

Out-of-Band Threshold Selector (MODE)

The MAX4952A provides full OOB signal support through high-speed amplitude detection circuitry. OOB differential input signals less than the internal OOB threshold (VSQ-DIFF) are detected as OFF and not passed to the output. This prevents the system from responding to unwanted noise. OOB differential input signals higher than VSQ-DIFF are detected as ON and passed to the output, allowing OOB signals to transmit through the MAX4952A. The logic level of the MODE input sets VSQ-DIFF for either SAS or SATA OOB signals (see Table 1). MODE has an internal pulldown resistor of 70kΩ (typ).

Table 1. Out-of-Band Logic Threshold (MODE)

MODE	OOB MODE
0	SAS
1	SATA

Input Equalization (EQ0, EQ1)

The MAX4952A features control logic inputs (EQ0, EQ1) to enable input equalization on either channel, providing 3dB of boost (see Note 4 in the *Electrical Characteristics* table). Drive EQ0 or EQ1 high to enable input equalization on channel 0 or channel 1. Drive EQ0 or EQ1 low to disable input equalization on channel 0 or channel 1 (see Table 2). EQ0 and EQ1 have internal pulldown resistors of 70kΩ (typ).

Table 2. Input Equalization (EQ0, EQ1)

EQ1	EQ0	CHANNEL 1 (dB)	CHANNEL 0 (dB)
0	0	0	0
0	1	0	3 (typ)
1	0	3 (typ)	0
1	1	3 (typ)	3 (typ)

Output Preemphasis (PE0, PE1)

The MAX4952A features control logic inputs (PE0, PE1) to enable output preemphasis on either channel, providing 3dB of boost. The MAX4952A uses true preemphasis, so the transition signal is increased after a changing bit, thus increasing the total energy content of the signal when employed. Drive PE0 or PE1 high to enable output preemphasis on channel 0 or channel 1. Drive PE0 or PE1 low to disable output preemphasis on channel 0 or channel 1 (see Table 3). PE0 and PE1 have internal pulldown resistors of 70kΩ (typ).

PE1	PE0	CHANNEL 1 (dB)	CHANNEL 0 (dB)
0	0	0	0
0	1	0	3 (typ)
1	0	3 (typ)	0
1	1	3 (typ)	3 (typ)

Applications Information

Exposed Pad Package

The exposed pad, 28-pin TQFN package incorporates features that provide a very low thermal resistance path for heat removal from the IC. The exposed pad on the MAX4952A must be soldered to GND for proper thermal and electrical performance. For more information on exposed pad packages, refer to Maxim Application Note HFAN-08.1: *Thermal Considerations of QFN and Other Exposed-Paddle Packages*.

Layout

Use controlled-impedance transmission lines to interface with high-speed inputs and outputs of the MAX4952A. Place power-supply 2.2 μ F and 0.01 μ F bypass capacitors as close as possible to VCC, recommended on each VCC pin.

Power-Supply Sequencing

Caution: Do not exceed the absolute maximum ratings because stresses beyond the listed ratings may cause permanent damage to the device.

Proper power-supply sequencing is recommended for all devices. Always apply VCC before applying signals, especially if the signal is not current limited.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
