

Type SP
**Cermet Panel
Potentiometers**

Features _____

- 0.375 Inch (9,25mm) Diameter
- 1 Watt @ 70°C
- TCR ± 100 PPM/C
- Immersion Sealed

Benefits _____

- Small Size
- High Power Capabilities
- Temperature Stable
- Washable

AVAILABILITY

Groupings _____

The Type SP Cermet Panel Potentiometers are divided into two groups.

OEM standard components— These OEM components (Bushing/Resistance/Taper Combinations and Bushing/Shaft/Taper Combinations, listed in the table on Page 237) are stocked as components at our manufacturing facilities. They offer a wider range of possible combinations than

the distributor stocked potentiometers but do require assembly.

All custom components— All other components listed are available. Since they are not stocked, they require both fabrication and assembly. Contact factory for information.

SPECIFICATIONS

General

Temperature range – -65°C to $+150^{\circ}\text{C}$.

Total resistance values – 50 ohms to 1 megohm.

Total resistance tolerances – $\pm 5\%$, $\pm 10\%$.

Taper – (Resistance – rotation characteristics) – “U” linear taper.

End resistance – Less than 5 ohms at both ends.

Electrical

Power – 1 watt maximum at $+70^{\circ}\text{C}$ provided voltage rating is not exceeded.

Power derating – Derate power linearly from $+70^{\circ}\text{C}$ to zero at $+150^{\circ}\text{C}$. Derate power 50 percent for non-metallic mounting. For rheostat applications, derate power directly with shaft or actuator position.

Voltage – 300 volts maximum working voltage (RMS or DC), or as determined by $E_{\text{max.}} = \sqrt{PR}$, whichever is less (at sea level).

Dielectric withstanding voltage – Will withstand a one second test of 750 volts RMS at sea level, or 350 volts RMS at 3.4 inches (86,36 mm) mercury.

Insulation resistance – 100 megohms minimum for clean and dry conditions at $+25^{\circ}\text{C}$.

Operational

Contact resistance variation – Less than 3 percent of nominal resistance value.

Load life – 5 percent maximum change in total resistance as a result of a 1000 hour test at rated power across entire

element in still air at $+70^{\circ}\text{C}$ (1.5 hours “ON”, 0.5 hour “OFF”).

Rotational life – 10 percent maximum change in total resistance as a result of 25,000 mechanical cycles under load.

Mechanical

Construction – Materials are essentially non-magnetic. Terminals are treated for easy soldering. The resistor incorporates an internal “O” ring between the shaft and bushing. External surfaces are given special treatment so that the entire unit is immersion sealed.

Shafts – Diameter of shafts .125 inch (3,18 mm). Minimum length .188 inch (4,76 mm). Maximum length 2.500 inches (63,50 mm).

Other shaft lengths available in 1/64 inch (0,40 mm) increments. All shaft lengths are measured from the mounting face of the resistor to the free end of the shaft.

Bushings – All bushings have a 32-NEF-2A thread and are .250 inch (6,35 mm) in diameter.

All bushing lengths are measured from the mounting face to the end of the bushing.

Turning torque – 0.5 to 6 inch-ounces (0,036 to 0,44 kgf-cm) at $+25^{\circ}\text{C}$.

Stop torque – 3 inch-pounds (3,46 kgf-cm) minimum.

Rotation – Mechanical rotation is $280^{\circ} \pm 5^{\circ}$. Electrical rotation is 240° nominal.

Backlash – Maximum of 3 degrees.

Weight – Approximately 5 grams.

Locating lugs – Seven locating lugs are available so the resistor may be indexed with respect to the surface on which it is mounted. Double flatted bushings and lug adapters accomplish this function. All lug adapters shipped in bulk. Unless otherwise specified, resistors are supplied in accordance with Option No. 2. See dimensions.

Hardware – Standard hardware is one mounting nut M-4721 and one internal tooth lock washer M-4748. Unless otherwise specified, all hardware shipped in bulk.

Marking – Clarostat part number and nominal total resistance are marked in two lines. Other marking possible, limited to a maximum of 13 characters in each of two lines. “Type SP” always included.

Environmental

Vibration — 2 percent maximum change in total resistance, 5 percent maximum change in resistance setting. (Tested per method 204, condition “C” of MIL-STD-202.)

Shock — 2 percent maximum change in total resistance, 5 percent maximum change in resistance setting. (Tested per method 213, condition “I” of MIL-STD-202.)

Moisture resistance — 2 percent maximum change in total resistance. (Method 106 of MIL-STD-202.)

Effect of soldering — 1 percent maximum change in total resistance as a result of immersing the terminals in 350°C solder to within 0.062 inch (1,59 mm) of the resistor for $5 \pm \frac{1}{2}$ seconds.

Temperature cycling — 3 percent maximum change in total resistance as a result of the temperature cycling test. (Five cycles at -65°C to $+150^{\circ}\text{C}$.)

High temperature exposure — 4 percent maximum change in total resistance as a result of the high temperature exposure test. ($+150^{\circ}\text{C}$ for 1000 hours without load.)

Low temperature operation — 2 percent maximum change in total resistance as a result of the low temperature operation test. (-65°C for two hours without load and 45 minutes with rated load.)

Temperature coefficient — Total resistance change less than ± 100 ppm/ $^{\circ}\text{C}$. (Tested per method 304 of MIL-STD-202.)

Immersion — No continuous stream of bubbles (4 or more) emanating from the resistor as a result of the immersion test (1 minute in water at $+85^{\circ}\text{C}$).

Washability — Capable of withstanding conventional after-solder boardwash processes using approved detergent or solvent solutions.

Ordering Information

1. Type (SPS, or SPP).
2. Taper (U, X).
3. Total resistance value in ohms.
4. Bushing type.
5. Bushing length in inches.
6. Shaft ending (plain, slotted or flatted).
7. Shaft length from mounting surface in inches.
8. Locating lug option (1,2,3,4,5,6 or 7).
9. Mounting hardware (A-B Standard or Other).
10. Part number you have assigned, if any.
11. Marking required on the part.
12. Special features.*

*Forward complete detailed specifications to the factory.

DIMENSIONS

Type SPS Plain Bushing – Solder Terminals

Resistor Connections

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
