### General Description

The IXI858 and IXI859 combine a power MOSFET driver, linear voltage regulator, and charge pump regulator for power supply generation in a single SOIC-8 package. The IXI858 features a 5.0V linear voltage regulator, and the IXI859 a 3.3V linear voltage regulator. These three power functions combined on the IXI858/859 target micro-controller based off-line applications.

The IXI858 and IXI859 are designed to operate over a temperature range of  $-25^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$ , and are available in an 8 lead SOIC package.

Functional operation of the device at these or any other conditions beyond those indicated in the operational sections of this data sheet is not implied. Exposure of the device to the absolute maximum ratings for an extended period may degrade the device and affect its reliability.*

**ESD Warning**

ESD (electrostatic discharge) sensitive device. Although the IXI858 / IXI859 feature proprietary ESD protection circuitry, permanent damage may be sustained if subjected to high energy electrostatic discharges. Proper ESD precautions are recommended to avoid performance degradation or loss of functionality.
