

### FEATURES

- 1.5 pF off capacitance
- 0.5 pC charge injection
- 33 V supply range
- 120  $\Omega$  on resistance
- Fully specified at  $\pm 15\text{ V}/+12\text{ V}$
- 3 V logic-compatible inputs
- Rail-to-rail operation
- Break-before-make switching action
- 16-lead TSSOP, 20-lead TSSOP, and 4 mm  $\times$  4 mm LFCSP
- Typical power consumption ( $<0.03\ \mu\text{W}$ )

### APPLICATIONS

- Audio and video routing
- Automatic test equipment
- Data acquisition systems
- Battery-powered systems
- Sample-and-hold systems
- Communication systems

### GENERAL DESCRIPTION

The [ADG1233](#) and [ADG1234](#) are monolithic *i*CMOS<sup>®</sup> analog switches comprising three independently selectable single-pole, double throw SPDT switches and four independently selectable SPDT switches, respectively.

All channels exhibit break-before-make switching action preventing momentary shorting when switching channels. An  $\overline{\text{EN}}$  input on the [ADG1233](#) and [ADG1234](#) enables or disables the device. When disabled, all channels are switched off.

The *i*CMOS (industrial-CMOS) modular manufacturing process combines a high voltage complementary metal-oxide semiconductor (CMOS) and bipolar technologies. It enables the development of a wide range of high performance analog ICs capable of 33 V operation in a footprint that no other generation of high voltage devices has been able to achieve.

### FUNCTIONAL BLOCK DIAGRAMS

Figure 1.

Figure 2.

Unlike analog ICs using conventional CMOS processes, *i*CMOS components can tolerate high supply voltages while providing increased performance, dramatically lowered power consumption, and reduced package size.

The ultralow capacitance and charge injection of these multiplexers make them ideal solutions for data acquisition and sample-and-hold applications, where low glitch and fast settling are required.

Fast switching speed coupled with high signal bandwidth make the devices suitable for video signal switching. *i*CMOS construction ensures ultralow power dissipation, making the devices ideally suited for portable and battery-powered instruments.

### PRODUCT HIGHLIGHTS

1. 1.5 pF off capacitance ( $\pm 15\text{ V}$  supply).
2. 0.5 pC charge injection.
3. 3 V logic-compatible digital input,  $V_{\text{IH}} = 2.0\text{ V}$ ,  $V_{\text{IL}} = 0.8\text{ V}$ .
4. 16-lead TSSOP, 20-lead TSSOP, and 4 mm  $\times$  4 mm LFCSP.

## ABSOLUTE MAXIMUM RATINGS

$T_A = 25^\circ\text{C}$ , unless otherwise noted.

**Table 3.**

Parameter	Rating
$V_{DD}$ to $V_{SS}$	35 V
$V_{DD}$ to GND	-0.3 V to +25 V
$V_{SS}$ to GND	+0.3 V to -25 V
Analog Inputs <sup>1</sup>	$V_{SS} - 0.3\text{ V}$ to $V_{DD} + 0.3\text{ V}$ or 30 mA (whichever occurs first)
Digital Inputs	GND - 0.3 V to $V_{DD} + 0.3\text{ V}$ or 30 mA (whichever occurs first)
Continuous Current, S or D	24 mA
Peak Current, S or D (Pulsed at 1 ms, 10% Duty Cycle Maximum)	100 mA
Operating Temperature Range	
Automotive Temperature Range (Y Version)	-40°C to +125°C
Storage Temperature Range	-65°C to +150°C
Junction Temperature	150°C
TSSOP, $\theta_{JA}$ , Thermal Impedance	112°C/W
LFCSP, $\theta_{JA}$ , Thermal Impedance	30.4°C/W
Reflow Soldering Peak Temperature, Pb-Free	260°C

<sup>1</sup> Overvoltages at A,  $\overline{\text{EN}}$ , S, or D are clamped by internal diodes. Current must be limited to the maximum ratings given.

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

Only one absolute maximum rating is applied at any one time.

### ESD CAUTION

#### ESD (electrostatic discharge) sensitive device.

Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

## TERMINOLOGY

$V_{DD}$

Most positive supply potential.

$V_{SS}$

Most negative power supply potential in dual supplies. In single-supply applications, it can be connected to ground.

**GND**

Ground (0 V) reference.

$R_{ON}$

Ohmic resistance between D and S.

$\Delta R_{ON}$

Difference between the  $R_{ON}$  of any two channels.

$I_S$  (Off)

Source leakage current when switch is off.

$I_D$  (Off)

Drain leakage current when switch is off.

$I_D, I_S$  (On)

Channel leakage current when switch is on.

$V_D, V_S$

Analog voltage on Terminal D, Terminal S.

$C_S$  (Off)

Channel input capacitance for off condition.

$C_D$  (Off)

Channel output capacitance for off condition.

$C_D, C_S$  (On)

On switch capacitance.

$C_{IN}$

Digital input capacitance.

$t_{ON}(\overline{EN})$

Delay time between the 50% and 90% points of the digital input and switch on condition.

$t_{OFF}(\overline{EN})$

Delay time between the 50% and 90% points of the digital input and switch off condition.

$t_{TRANSITION}$

Delay time between the 50% and 90% points of the digital inputs and the switch on condition when switching from one address state to another.

$t_{BBM}$

Off time measured between the 80% point of both switches when switching from one address state to another.

$V_{INL}$

Maximum input voltage for Logic 0.

$V_{INH}$

Minimum input voltage for Logic 1.

$I_{INL}, I_{INH}$

Input current of the digital input.

$I_{DD}$

Positive supply current.

$I_{SS}$

Negative supply current.

### Off Isolation

A measure of an unwanted signal coupling through an off channel.

### Charge Injection

A measure of the glitch impulse transferred from the digital input to the analog output during switching.

### Bandwidth

Frequency at which the output is attenuated by 3 dB.

### On Response

Frequency response of the on switch.

### THD + N

Ratio of the harmonic amplitude plus noise of the signal to the fundamental.

ADG1234YCPZ-REEL7	-40°C to +125°C	20-Lead Lead Frame Chip Scale Package [LFCS]	CP-20-6

<sup>1</sup> Z = RoHS Compliant Part.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
