

64-Channel Serial to Parallel Converter with P-Channel Open Drain Controllable Output Current

Features

- ▶ HVCMOS® technology
- ▶ 5.0V CMOS Logic
- ▶ Output voltage up to -85V
- ▶ Output current source control
- ▶ 16MHz equivalent data rate
- ▶ Latched data outputs
- ▶ Forward and reverse shifting options (DIR pin)
- ▶ Diode to VDD allows efficient power recovery
- ▶ Hi-Rel processing available

General Description

The HV57009 is a low-voltage serial to high-voltage parallel converter with P-channel open drain outputs. This device has been designed for use as a driver for plasma panels.

The device has two parallel 32-bit shift registers, permitting data rates twice the speed of one (they are clocked together). There are also 64 latches and control logic to perform the blanking of the outputs. HV_{OUT1} is connected to the first stage of the first shift register through the blanking logic. Data is shifted through the shift registers on the logic low to high transition of the clock. The DIR pin causes CCW shifting when connected to VSS, and CW shifting when connected to VDD. A data output buffer is provided for cascading devices. This output reflects the current status of the last bit of the shift register (HV_{OUT64}). Operation of the shift register is not affected by the \overline{LE} (latch enable), or the \overline{BL} (blanking) inputs. Transfer of data from the shift registers to latches occurs when the \overline{LE} input is high. The data in the latches is stored when \overline{LE} is low.

The HV570 has 64 channels of output constant current sourcing capability. They are adjustable from 0.1 to 2.0mA through one external resistor or a current source.

Functional Block Diagram

Note:
Each SR (shift register) provides 32 outputs. SR1 supplies outputs 1 to 32 and SR2 supplies outputs 33 to 64.

Absolute Maximum Ratings

Parameter	Value
Supply voltage, V_{DD}^1	-0.5V to +7.5V
Output voltage, V_{NN}^1	$V_{DD} + 0.5V$ to -95V
Logic input levels ¹	-0.3V to $V_{DD} + 0.3V$
Ground current ²	1.5A
Continuous total power dissipation ³	1200mW
Operating temperature range	-40°C to +85°C
Storage temperature range	-65°C to +150°C
Lead temperature ⁴	260°C

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Continuous operation of the device at the absolute rating level may affect device reliability.

Notes:

- All voltages are referenced to V_{SS} .
- Duty cycle is limited by the total power dissipated in the package.
- For operation above 25°C ambient derate linearly to maximum operating temperature at 20mW/°C.
- 1.6mm (1/16inch) from case for 10 seconds

Recommended Operating Conditions

Sym	Parameter	Min	Max	Units
V_{DD}	Logic supply voltage	4.5	5.5	V
HV_{OUT}	HV output off voltage	-85	V_{DD}	V
V_{IH}	High-level input voltage	$V_{DD} - 1.2V$	V_{DD}	V
V_{IL}	Low-level input voltage	0	1.2	V
f_{CLK}	Clock frequency per register	DC	8.0 4.5	MHz
T_A	Operating free-air temperature	-40	+85	°C

Notes:

Power-up sequence should be the following:

- Connect ground
- Apply V_{DD}
- Set all inputs to a known state

Power-down sequence should be the reverse of the above.

DC Electrical Characteristics (All voltages are referenced to V_{SS} , $V_{SS} = 0$, $T_A = 25^\circ\text{C}$)

Typical Current Programming Circuits

Figure 1a: Negative Control

Figure 1b: Positive Control

*Required if $R_{EXT} > 10K\Omega$ or R_{EXT} is replaced by a constant current source.

$$\text{Since } I_{OUT} = I_{REF} = \left| \frac{V_{REF}}{R_{EXT}} \right|$$

Therefore:

$$\text{If } I_{OUT} = 2.0\text{mA and } V_{REF} = -5.0\text{V} \rightarrow R_{EXT} = 2.5K\Omega.$$

$$\text{If } I_{OUT} = 1.0\text{mA and } R_{EXT} = 1.0K\Omega \rightarrow V_{REF} = -1.0\text{V}.$$

If $R_{EXT} > 10K\Omega$, add series network R_D and C_D to ground for stability as shown.

This control method behaves linearly as long as the operational amplifier is not saturated. However, it requires a negative power source and needs to provide a current $I_{REF} = I_{OUT}$ for each HV570 chip being controlled.

If $HV_{OUT} \geq +1.0\text{V}$, the HV_{OUT} cascade may no longer operate as a perfect current source, and the output current will diminish. This effect depends on the magnitude of the output current.

Given I_{OUT} and V_{REF} , the R_{EXT} can be calculated by using:

$$R_{EXT} = \frac{V_{REF}}{I_{REF}} = \frac{V_{REF}}{I_{OUT}}$$

The intersection of a set of I_{OUT} and V_{REF} values can be located in the graph shown below. The value picked for R_{EXT} must always be in the shaded area for linear operation. This control method has the advantage that V_{REF} is positive, and draws only leakage current. If $R_{EXT} > 10K\Omega$, add series network R_D and C_D to ground for stability as shown.

Note:

Lower reference current I_{REF} results in higher distortion, ΔI_{CS} , on the output.

Notes:

1. Pin designation for DIR = VDD.
2. A 0.1 μ F capacitor is needed between VDD and VBP (pin 40) for better output current stability and to prevent transient cross-coupling between outputs. See Figures 1a and 1b.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
