GENERAL DESCRIPTION

The AD8672-EP is a very high precision amplifier featuring very low noise, very low offset voltage and drift, low input bias current, 10 MHz bandwidth, and low power consumption. Outputs are stable with capacitive loads of over 1000 pF. Supply current is less than 3 mA per amplifier at 30 V.

The combination of ultralow noise, high precision, speed, and stability within the AD8672-EP is unmatched. Applications for this amplifier include high quality PLL filters, precision filters, medical and analytical instrumentation, precision power supply controls, ATE, data acquisition, and precision controls, as well as professional quality audio.

The AD8672-EP is available in an 8-lead SOIC narrow package. It is specified over a −55°C to +125°C temperature range.

Additional application and technical information can be found in the AD8672 data sheet.
