

SY89467U

Precision LVPECL 1:20 Fanout with 2:1 MUX and Internal Termination with Fail-Safe Input

General Description

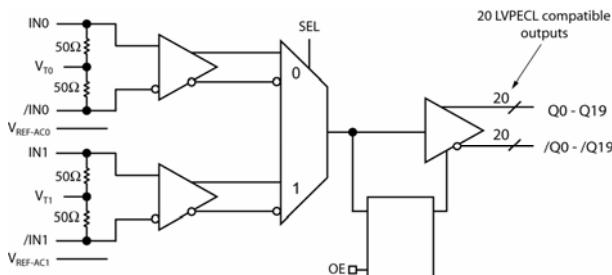

The SY89467U is a 2.5/3.3V, 1:20 LVPECL fanout buffer with a 2:1 differential input multiplexer (MUX). A unique Fail-Safe Input (FSI) protection prevents metastable output conditions when the selected input clock fails to a DC voltage (when voltage between the pins of the differential input drops significantly below 100mV).

The differential input includes Micrel's unique, 3-pin internal termination architecture that can interface to any differential signal (AC- or DC-coupled) as small as 100mV (200mV_{PP}) without any level shifting or termination resistor networks in the signal path. The outputs are 800mV, LVPECL with fast rise/fall times guaranteed to be less than 270ps.

The SY89467U operates from a 2.5V $\pm 5\%$ or 3.3V $\pm 10\%$ supply and is guaranteed over the full industrial temperature range of -40°C to $+85^{\circ}\text{C}$. The SY89467U is part of Micrel's high-speed, Precision Edge® product line.

All support documentation can be found on Micrel's web site at: www.micrel.com.

Functional Block Diagram

Precision Edge®

Features

- Selects between two inputs, and provides 20 precision LVPECL copies
- Fail-Safe Input
 - Prevents outputs from oscillating when input is invalid
- Guaranteed AC performance over temperature and supply voltage:
 - DC-to >1.5 GHz throughput
 - < 1200ps Propagation Delay (In-to-Q)
 - 270ps Rise/Fall times
- Ultra-low jitter design:
 - <1ps_{RMS} random jitter
 - <1ps_{RMS} cycle-to-cycle jitter
 - <10ps_{PP} total jitter (clock)
 - <0.7ps_{RMS} MUX crosstalk induced jitter
- Unique, patented MUX input isolation design minimizes adjacent channel crosstalk
- Unique patented internal termination and VT pin accepts DC- and AC-coupled inputs (CML, PECL, LVDS)
- Wide input voltage range: V_{CC} to GND
- 2.5V $\pm 5\%$ or 3.3V $\pm 10\%$ supply voltage
- -40°C to $+85^{\circ}\text{C}$ industrial temperature range
- Available in 64-pin TQFP package

Applications

- Fail-safe clock protection
- SONET clock distribution
- Backplane distribution

Markets

- LAN/WAN
- Enterprise servers
- ATE
- Test and measurement

2. Tape and Reel.

Pin Configuration

64-Pin EPAD-TQFP (T64-1)

Pin Description

Pin Number	Pin Name	Pin Function
1, 16, 23, 33 41, 48, 58	VCC	Positive Power Supply: Bypass with $0.1\mu F 0.01\mu F$ low ESR capacitors as close to the V _{CC} pins as possible.
64, 63 62, 61 60, 59 57, 56 55, 54 53, 52 51, 50 47, 46 45, 44 43, 42 39, 38 37, 36 35, 34 31, 30 29, 28 27, 26 25, 24 22, 21 20, 19 18, 17	Q0, /Q0 Q1, /Q1 Q2, /Q2 Q3, /Q3 Q4, /Q4 Q5, /Q5 Q6, /Q6 Q7, /Q7 Q8, /Q8 Q9, /Q9 Q10, /Q10 Q11, /Q11 Q12, /Q12 Q13, /Q13 Q14, /Q14 Q15, /Q15 Q16, /Q16 Q17, /Q17 Q18, /Q18 Q19, /Q19	LVPECL Differential Output Pairs: Differential buffered output copies of the selected input signal. The output swing is typically 800mV. Unused output pairs may be left floating with no impact on jitter. See "LVPECL Output Termination" subsection. Normally terminated with 50Ω to V _{CC} -2V. These differential LVPECL outputs are a logic function of the IN0, IN1, and SEL inputs. See "Truth Table" below.
4, 13	VREF-AC0 VREF-AC1	Reference Voltage: These outputs bias to V _{CC} -1.2V. They are used for AC-coupling inputs IN and /IN. Connect VREF-AC directly to the corresponding VT pin. Bypass with $0.01\mu F$ low ESR capacitor to V _{CC} . Due to limited drive capability, each VREF-AC pin is only intended to drive its respective VT pin. Maximum sink/source current is $\pm 0.5\text{mA}$. See "Input Interface Applications" subsection.
5, 12	VT0, VT1	Input Termination Center-Tap: Each side of a differential input pair terminates to the VT pin. The VT pin provides a center-tap for each input (IN, /IN) to a termination network for maximum interface flexibility. See "Input Interface Applications" subsection.
6, 7 10, 11	IN0, /IN0 IN1, /IN1	Differential Inputs: These input pairs are the differential signal inputs to the device. These inputs accept AC- or DC-coupled signals as small as 100mV. The input pairs internally terminate to a VT pin through 50Ω . This allows a wide input voltage range from V _{CC} to GND. See Figure 3a, Simplified Differential Input Stage for details. Note that when these inputs are left in an open state, the FSI feature will override this input state and provide a valid state at the output. See "Functional Description" subsection.
2, 3, 14, 15, 32, 40, 49	GND, Exposed Pad	Ground. Exposed pad must be connected to a ground plane that is the same potential as the ground pins.
9	OE	Single-Ended Input: This TTL/CMOS input disables and enables the Q0-Q19 outputs. It is internally connected to a $25k\Omega$ pull-up resistor and will default to a logic HIGH state if left open. When disabled, Q goes LOW and /Q goes HIGH. OE being synchronous, outputs will be enabled/disabled following a rising and a falling edge of the input clock. $V_{TH} = V_{CC}/2$.
8	SEL	Single-Ended Input: This single-ended TTL/CMOS-compatible input selects the inputs to the multiplexer. Note that this input is internally connected to a $25k\Omega$ pull-up resistor and will default to logic HIGH state if left open. $V_{TH} = V_{CC}/2$.

V_{DIFF_IN}	Differential Input Voltage Swing $ IN-/IN $	See Figure 2b.	0.2			V
V_{IN_FSI}	Input Voltage Threshold that Triggers FSI			30	100	mV
V_{REF-AC}	Output Reference Voltage	$I_{VREF-AC} = \pm 0.5$ mA	$V_{CC}-1.3$	$V_{CC}-1.2$	$V_{CC}-1.1$	V
V_{T_IN}	Voltage from Input to V_T				1.28	V

Notes:

1. Permanent device damage may occur if absolute maximum ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
2. The data sheet limits are not guaranteed if the device is operated beyond the operating ratings.
3. Package thermal resistance assumes exposed pad is soldered (or equivalent) to the devices most negative potential on the PCB. θ_{JA} and ψ_{JB} values are determined for a 4-layer board in still air unless otherwise stated.
4. Due to limited drive capability use for input of the same package only.
5. The circuit is designed to meet the DC specifications shown in the above table after thermal equilibrium has been established.
6. V_{IN} (max) is specified when V_T is floating.

LVPECL Outputs DC Electrical Characteristics⁽⁷⁾

$V_{CC} = 2.5V \pm 5\%$ or $3.3V \pm 10\%$; $R_L = 50\Omega$ to $V_{CC}-2V$; $T_A = -40^\circ C$ to $+ 85^\circ C$, unless otherwise stated.

	Output Rise/Fall Time (20% to 80%)	At full output swing.	110	170	250	ps
	Duty Cycle	$V_{IN} > 200mV$	45		55	%
		$100mV < V_{IN} \leq 200mV$	45		55	%

Notes:

8. High-frequency AC-parameters are guaranteed by design and characterization.
9. Propagation delay is measured with input $t_r, t_f \leq 300ps$ (20% to 80%). The propagation delay is a function of the rise and fall times at IN. See "Typical Operating Characteristics" for details.
10. Set-up and hold times apply to synchronous applications that intend to enable/disable before the next clock cycle. For asynchronous applications, set-up and hold do not apply.
11. Output-to-Output skew is measured between two different outputs under identical transitions.
12. Input-to-Input skew is the time difference between the two inputs to one output, under identical input transitions.
13. Part-to-Part skew is defined for two parts with identical power supply voltages at the same temperature and with no skew of the edges at the respective inputs.
14. Random Jitter is measured with a K28.7 character pattern, measured at $< f_{MAX}$.
15. Cycle-to-Cycle Jitter definition: the variation of periods between adjacent cycles, $T_n - T_{n-1}$ where T is the time between rising edges of the output signal.
16. Total Jitter definition: with an ideal clock input of frequency $< f_{MAX}$, no more than one output edge in 10^{12} output edges will deviate by more than the specified peak-to-peak jitter value.
17. Crosstalk is measured at the output while applying two similar differential clock frequencies that are asynchronous with respect to each other at the inputs.

Functional Description

Clock Select (SEL)

SEL is an asynchronous TTL/CMOS compatible input that selects one of the two input signals. An internal $25k\Omega$ pull-up resistor defaults the input to logic HIGH if left open. Input switching threshold is $V_{CC}/2$. Refer to Figure 1a.

Fail-Safe Input (FSI)

The input includes a special failsafe circuit to sense the amplitude of the input signal and to latch the outputs when there is no input signal present, or when the amplitude of the input signal drops sufficiently below $100mV_{PK}$, typically $30mV_{PK}$. Maximum frequency of the SY89467U is limited by the FSI function. Refer to Figure 1b.

Input Clock Failure Case

If the input clock fails to a floating, static, or extremely low signal swing such that the voltage across the input pair is significantly less than $100mV$, FSI function will eliminate a metastable condition and latch the outputs to the last valid state. No ringing and no undetermined state will occur at the output under these conditions. The output recovers to normal operation once the input signal returns to a valid state with a typical swing greater than $30mV$.

Note that the FSI function will not prevent duty cycle distortion in case of a slowly deteriorating (but still toggling) input signal. Due to the FSI function, the propagation delay will depend on the rise and fall time of the input signal and on its amplitude.

Output Enable (OE)

OE is a synchronous TTL/CMOS compatible input that enables/disables the outputs based upon the input to this pin. The enable function is synchronous so that the clock outputs will be enabled or disabled following a rising and a falling edge of the input clock. Refer to Figure 1c. Internal $25k\Omega$ pull-up resistor defaults the input to logic HIGH if left open. Input switching threshold is $V_{CC}/2$.

Timing Diagrams

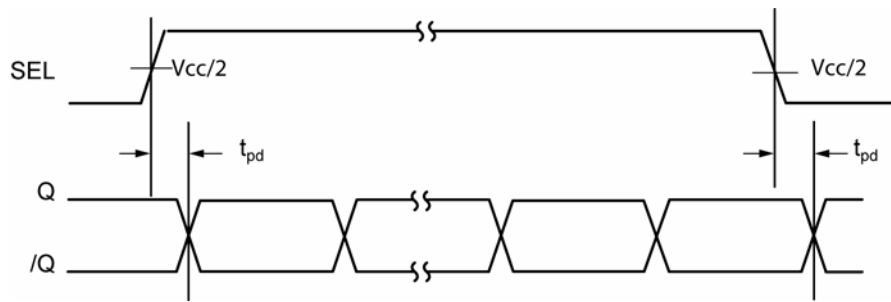

Figure 1a. SEL-to-Q Delay

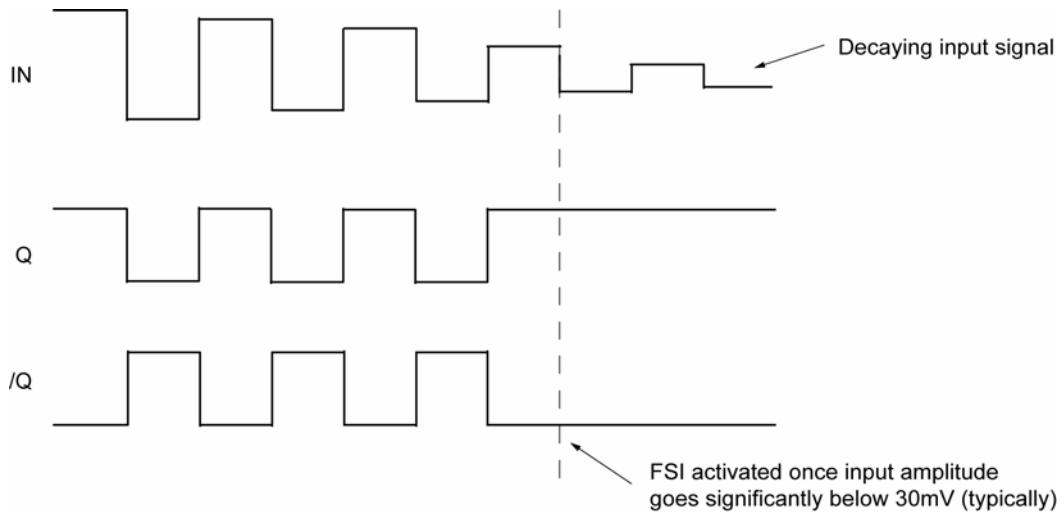

Figure 1b. Fail-Safe Feature

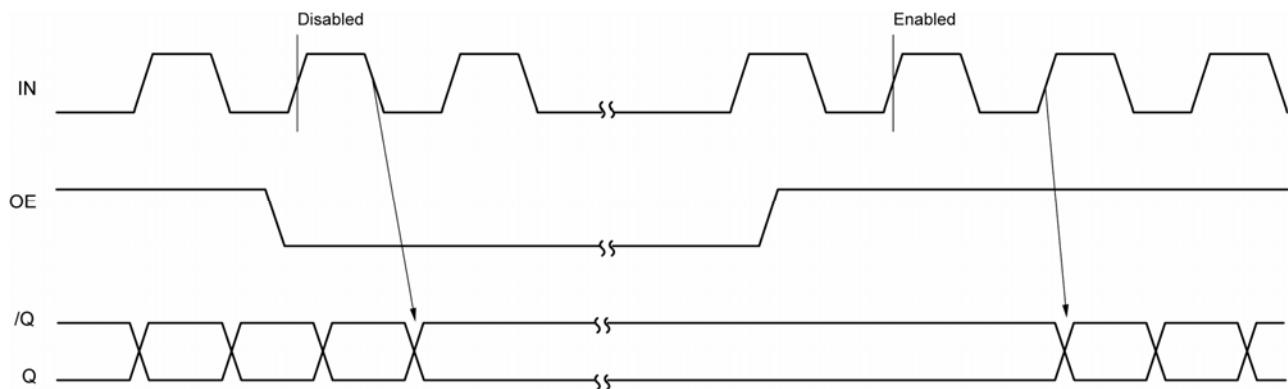

Figure 1c. Enable Output Timing Diagram

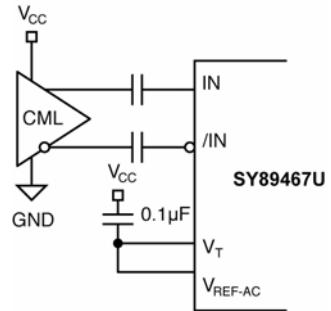

Figure 4d. CML Interface (AC-Coupled)

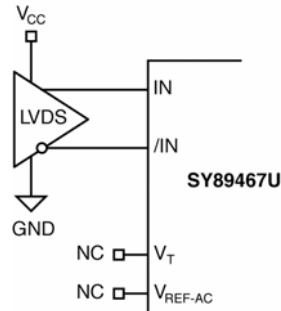

Figure 4e. LVDS Interface (DC-Coupled)

PECL Output Interface Applications

PECL has a high input impedance, a very low output impedance (open emitter), and a small signal swing which results in low EMI. PECL is ideal for driving 50ohm and 100ohm-controlled impedance transmission lines. There are several techniques for terminating the PECL output: parallel termination-thevenin equivalent, parallel termination (3-resistor), and AC-coupled termination. Unused output pairs may be left floating. However, single-ended outputs must be terminated or balanced.

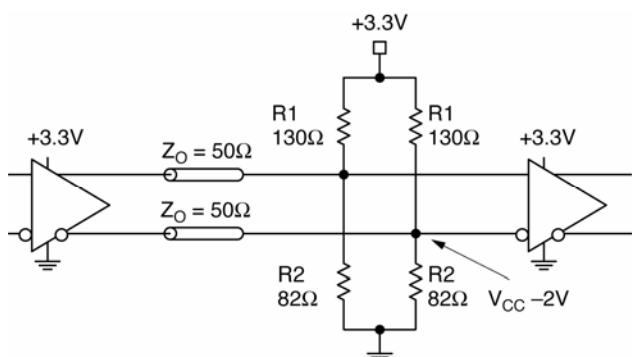

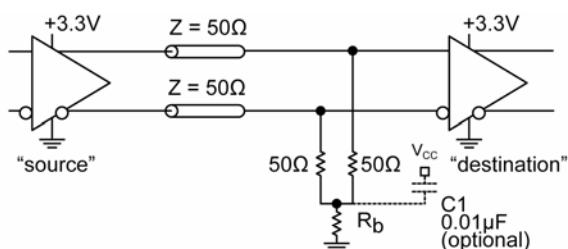

Figure 5a. Parallel Termination-Thevenin Equivalent

Notes:

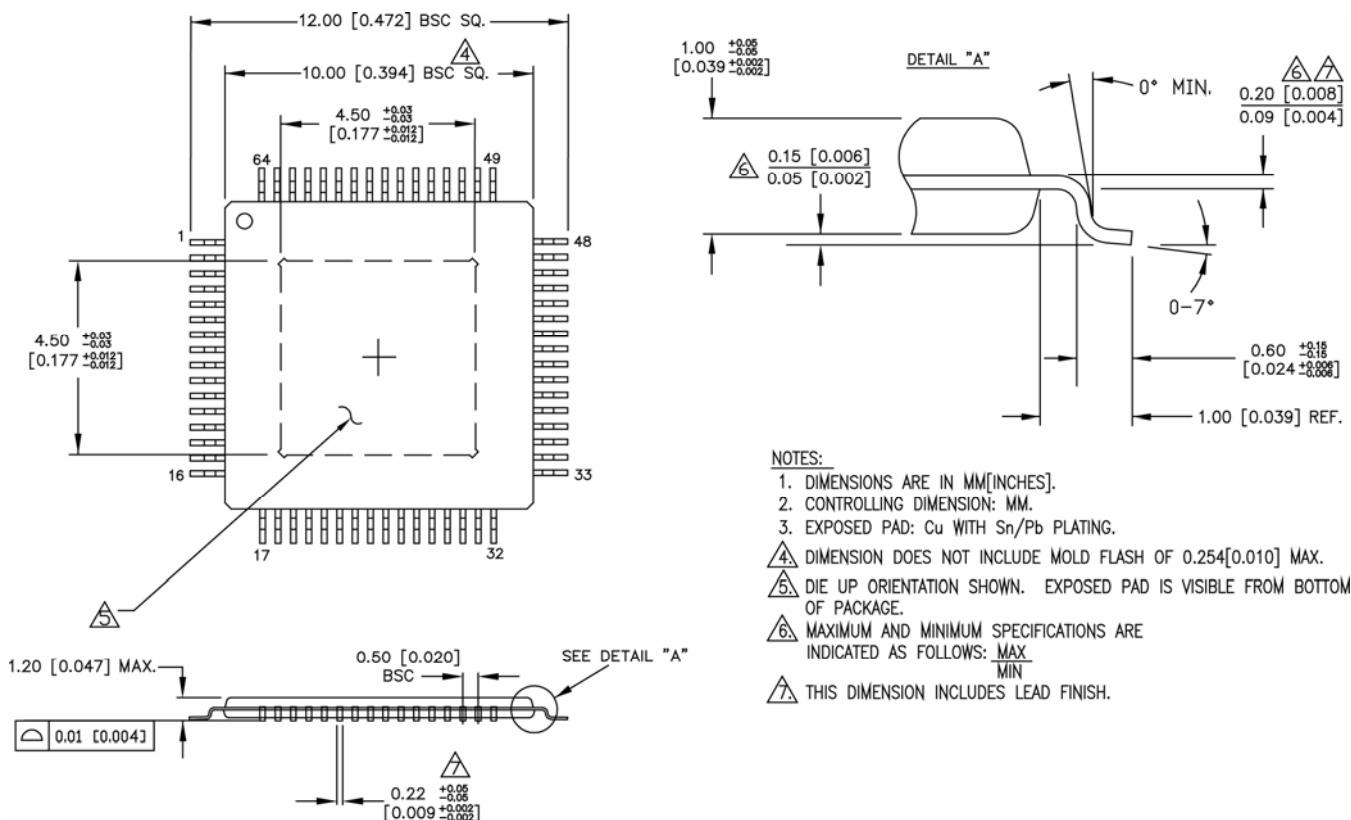

1. Power-saving alternative to Thevenin termination.
2. Place termination resistors as close to destination inputs as possible.
3. Rb resistor sets the DC bias voltage.
4. For 2.5V systems, Rb = 19Ω. For 3.3V systems, Rb = 50Ω.

Figure 5b. Parallel Termination (3-Resistor)

"LifeElectronics" LLC

ИНН 7805602321 КПП 780501001 Р/С 40702810122510004610 ФАКБ "АБСОЛЮТ БАНК" (ЗАО) в г.Санкт-Петербурге К/С 30101810900000000703 БИК 044030703

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибуторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибуторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помочь разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
