1. Introduction

The Matrix Orbital EVE3 lineup utilizes Bridgetek’s third generation BT81x Embedded Video Engine to control, render, manage and display complex graphics on a full color TFT touch screen. By taking advantage of the 1 megabyte of graphics RAM, motion-JPEG encoded AVI videos can be played back in both portrait and landscape mode. Data can be displayed through a set of widgets such as gauges, spinners, sliders, and bar graphs.

Additional features include compatibility with capacitive or resistive touch panels and support for up to 255 touch objects on screen. Mono 8-bit linear audio wave playback at sampling frequencies from 8 kHz to 48 kHz is made possible by the built-in sound synthesizer and digital filter. Up to 256Megabits of high speed QSPI NOR Flash can be added to the EVE3 TFT Module allowing image, font, audio, and video assets to be stored on the EVE3 board.

The EVE3 communicates using SPI protocol, and can be configured for quad SPI communication. Using SPI communication protocol makes the EVE3 compatible with many microcontrollers available on the market, including the Bridgetek FT900, NXP 17XX, Arduino, and many more. With built-in graphics operations, and support for multiple widgets, development of high-quality Human Machine Interfaces (HMI) screens is simplified.

1.1. Key Features

- Advanced Embedded Video Engine(EVE) BT81x with high resolution graphics and video playback
- Support multiple widgets for simplified design development
- Support for Resistive and Capacitive Touch Screen Technology
- Support capacitive touch screen with up to 5 touches detection
- Support for LCD display with resolution up to SVGA (800x600) and formats with data enable (DE) mode or VSYNC/HSYNC mode
- Support landscape and portrait orientations
- Support playback of motion-JPEG encoded AVI videos
- -20°C to 70°C extended operating temperature range
- Up to 256 Megabits of QSPI NOR Flash memory

1.2. Block Diagram

Figure 1: EVE3 Block Diagram

2. Bridgetek EVE BT81x Graphics Engine

The BT81x series chips are graphics controllers with add-on features such as audio playback and touch capabilities, and contain a rich set of graphic objects (primitive and widgets) that can be used for displaying various menus and screens for a range of products including home appliances, toys, industrial machinery, home automation, elevators, and many more.

The BT81x EVE graphics controller ICs combine display, touch and audio functionality within a single chip and take an innovative object-oriented approach to HMI implementation that is proving highly effective. The third generation EVE devices at the heart of the EVE3 TFT Module has a greater pixel resolution than previous EVE ICs, resulting in sharper image rendering and greater colour depth. The BT81x also has accelerated data transfer and image/video loading capabilities, enhanced video playback, plus expanded memory resources.

Figure 2: EVE3 Embedded Video Engine

More details regarding the BT81x, and how to control it can be found on the official Bridgetek website, <http://www.brtchip.com/bt81x>

3. Ordering

The EVE3 has multiple size and touch variants, to ensure that there is an option for every application. Resistive and capacitive touch panels are also available, allowing interactive touch functionality for all applications.

3.1. Ordering Part Numbering Scheme

Table 1: EVE3 Part Numbering Scheme

| EVE3 | -35 | A | -BLM | -TPN | -F256 |
|------|-----|---|------|------|-------|
| 1 | 2 | 3 | 4 | 5 | 6 |

3.2. Options

Table 2: EVE3 Display Options

| # | Designator | Options |
|---|--------------|---|
| 1 | Product Type | EVE3: BT81X TFT Display |
| 2 | Display Size | 35: 3.5" 43: 4.3" 50: 5.0" 70: 7.0" |
| 3 | Screen Type | A: Standard TFT G: Extended Bezel touch panel |
| 4 | Backlight | -BLM: 300 Nit < Brightness < 600 Nit -BLH: 600 Nit < Brightness < 1000 Nit -BLD: Brightness > 1000 Nit |
| 5 | Touch | -TPC: Capacitive -TPR: Resistive -TPN: None |
| 6 | Memory | -F0: 0 Mb QSPI NOR Flash memory -F32: 32 Mb QSPI NOR Flash memory -F64: 64 Mb QSPI NOR Flash memory -F128: 128 Mb QSPI NOR Flash memory -F256: 256 Mb QSPI NOR Flash memory |

3.3. Recommend Parts

EVE2-USB2SPI-KIT-A

Figure 3: EVE2-USB2SPI-KIT-A

The Matrix Orbital USB to SPI Bridge utilizes the FTDI FT232H IC, allowing users to communicate to their SPI devices through a USB interface. Made specifically to be used with the Matrix Orbital EVE series of displays, the USB to SPI Bridge can help decrease development time and reduce development hardware complexity.

EVE2-SHIELD

Figure 4: EVE2-SHIELD

The Scoodo is an interface module for Matrix Orbital EVE SPI TFT displays to Arduino Uno and Parallax Propeller Shield products.

EVE2-SPI2BBC

Figure 5: EVE2-SPI2BBC

A simple breakout board that allows converts the EVE's 20 pin FFC cable to a 20 position 2.54mm 2 row straight pin header.

4. EVE3 Headers

Figure 6: EVE3 TFT Module Header Locations

Table 3: List of available Headers

| # | Header | Standard Mate |
|---|-----------------------------|---------------|
| 1 | SPI Communication and Power | FFC-20P |
| 2 | BT81x Communication pads | None |

4.1. SPI Communication and Power Header Pinout

The 20 pin FFC header on the EVE3 is used to interface with an SPI controller, and is compatible with a number of 20 pin ribbon cables. Any 20 pin FFC cable with a 0.5mm pitch and bottom contacts, such as the Würth Electronics INC 687620050002 series ribbon cable will be compatible with the EVE3 TFT Module.

Figure 7: EVE3 TFT Module 20 pin FFC communication header

Table 4: EVE3 TFT Module 20 pin FFC communication header pinout

| Pin | Symbol | Type | Function |
|-----|-------------------------|-------------------|--|
| 1 | VCC | Power | Logic Voltage (3.3V) |
| 2 | GND | Ground | Ground Connection |
| 3 | SCK | Input | SPI clock input |
| 4 | MISO | Input/output | SPI Single mode: SPI MISO output SPI Dual/Quad mode: SPI data line 1 |
| 5 | MOSI | Input/output | SPI Single mode: SPI MOSI input SPI Dual/Quad mode: SPI data line 0 |
| 6 | CS | Input | SPI slave select input.* |
| 7 | $\overline{\text{INT}}$ | Open Drain Output | Interrupt to host** |
| 8 | RST | | BT81x Reset pin |
| 9 | N/C | No connection | No connection |
| 10 | AUDIO | Output | Audio PWM out |
| 11 | IO2 | Input/output | SPI Single/Dual mode: General purpose IO 0 SPI Quad mode: SPI data line 2 |
| 12 | IO3 | Input/output | SPI Single/Dual mode: General purpose IO 1 SPI Quad mode: SPI data line 3 |
| 13 | GPIO2 | Input/output | General purpose IO 2 |
| 14 | GPIO3 | Input/output | General purpose IO 3 |
| 15 | GND | Ground | Ground connection |
| 16 | VCC | Power | Logic Voltage (3.3V) |
| 17 | BLVDD | VDD | No Connect (Optional Backlight Voltage) |
| 18 | BLVDD | VDD | No Connect (Optional Backlight Voltage) |
| 19 | BLGND | Ground | Ground |
| 20 | BLGND | Ground | Ground |

***Note:** The CS pin signifies when a SPI transaction occurs by going active low. When the pin goes inactive high, the write operation is considered complete.

****Note:** Open drain output (default) or push-pull output, active low

4.2. BT81x Communication Pads

All of the BT81x Communication pins are extended out and made available through the BT81x solder pads on the module. These solder pads offer an alternative method of connecting to the BT81x and provides the same functionality as their SPI Communication Header counterparts.

Each pad is 1 mm wide, 3mm in length, and follows a 2.54 mm pitch. It is recommended that 18 gauge wire or greater is used when soldering to these pads.

Table 5: BT81x Solder Pad pinout

Figure 8: BT81x Solder Pads

| Pin | Symbol | Type | Function |
|-----|-------------------------|-------------------|--|
| 1 | 3.3V | Power | Logic Voltage (3.3V) |
| 2 | GND | Ground | Ground Connection |
| 3 | SCK | Input | SPI clock input |
| 4 | MISO/IO1 | Input/output | SPI Single mode: SPI MISO output SPI Dual/Quad mode: SPI data line 1 |
| 5 | MOSI/IO0 | Input/output | SPI Single mode: SPI MISO input SPI Dual/Quad mode: SPI data line 0 |
| 6 | $\overline{\text{CS}}$ | Input | SPI slave select input.* |
| 7 | $\overline{\text{INT}}$ | Open Drain Output | Interrupt to host** |
| 8 | $\overline{\text{RST}}$ | | BT81x Reset pin |
| 9 | AUDIO | Output | Audio PWM out |
| 10 | GPIO0/IO2 | Input/output | SPI Single/Dual mode: General purpose IO 0 SPI Quad mode: SPI data line 2 |
| 11 | GPIO1/IO3 | Input/output | SPI Single/Dual mode: General purpose IO 1 SPI Quad mode: SPI data line 3 |
| 12 | BLVDD | VDD | No Connect (Optional Backlight Voltage) |
| 13 | BLGND | Ground | Ground |

***Note:** The CS pin signifies when a SPI transaction occurs by going active low. When the pin goes inactive high, the write operation is considered complete.

****Note:** Open drain output (default) or push-pull output, active low

5. Communication Interface

5.1. SPI Interface Timing Specification

Figure 9: SPI Timing Diagram

Table 6: SPI Timing Signals

| Parameter | Description | VCCIO = 3.3V | | Units |
|-----------|-------------------------------------|--------------|-----|-------|
| | | Min | Max | |
| Tsclk | SPI Clock Period (SINGLE/DUAL mode) | 33.3 | | ns |
| Tslck | SPI clock Period (QUAD mode) | 40 | | ns |
| Tsckl | SPI clock low duration | 13 | | ns |
| Tsckh | SPI clock high duration | 13 | | ns |
| Tsac | SPI access time | 3 | | ns |
| Tisu | Input Setup | 3 | | ns |
| Tih | Input hold | 0 | | ns |
| Tzo | Output enable delay | | 11 | ns |
| Toz | Output disable delay | | 10 | ns |
| Tod | Output data delay | | 11 | ns |
| Tcsnh | CSN hold time | 0 | | ns |

5.2. SPI and QSPI communication

The EVE3 is capable of communicating to hosts and microcontrollers through a quad serial parallel interface (QSPI). Only SPI mode 0 is supported. The QSPI slave interface can operate up to 30MHz, and can be configured in SINGLE, DUAL or QUAD channel modes.

The SPI slave defaults to SINGLE channel mode operation, using MISO as output to the master and MOSI as input from the master. The SPI slave can be configured to allow DUAL and QUAD channel modes by writing to register REG_SPI_WIDTH while in single channel mode.

Table 7: SPI/QSPI Communication Configuration

| REG_SPI_WIDTH[1:0] | Channel Mode | Data pins | Max bus speed |
|--------------------|-----------------------|--------------------|---------------|
| 00 | SINGLE - default mode | MISO, MOSI | 30 MHz |
| 01 | DUAL | IO0, IO1 | 30 MHz |
| 10 | QUAD | IO0, IO1, IO2, IO3 | 25 MHz |
| 11 | Reserved | - | - |

When DUAL/QUAD channel modes are enabled, the SPI data ports become unidirectional. SPI transactions will be signified by CS going active low when DUAL/QUAD modes are active, and data ports are set as inputs.

Hence, for writing to the BT81x, the protocol is “WR-Command/Addr2, Addr1, Addr0, DataX, DataY, DataZ ...” The write operation is considered complete when CS goes inactive high.

For reading from the BT81x, the protocol is “RD-Command/Addr2, Addr1, Addr0, Dummy-Byte, DataX, DataY, DataZ”. However as the data ports are now unidirectional, a change of port direction will occur before DataX is clocked out of the BT81x. Therefore it is important that the firmware controlling the SPI master changes the SPI master data port direction to “input” after transmitting Addr0. The BT81x will not change the port direction till it starts to clock out DataX. Hence, the Dummy-Byte cycles will be used as a change-over period when neither the SPI master nor slave will be driving the bus; the data paths thus must have pull-ups/pull-downs. The SPI slave from the BT81x will reset all its data ports’ direction to input once CS goes inactive high (i.e. at the end of the current SPI master transaction).

The below diagram depicts the behaviour of both the SPI master and slave in the master read case.

Figure 10: SPI Master and Slave bus behaviour

For DUAL channel operation, MISO(MSB) and MOSI are used. In Quad channel operation, IO3(MSB), IO2, MISO, and MOSI are used.

Figure 11: Single/Dual Channel SPI Interface connection

Figure 12: Quad channel SPI Interface connection

5.3. Serial Data Protocol

When interfaced with a host, the BT81x will appear as a memory-mapped SPI device. Communication between the host and the BT81x is accomplished through a series of reads and writes to a large (4 megabyte) address space. Within this address space are dedicated areas for graphics, audio and touch control.

The BT81x address space is read and written to using SPI transactions. Memory read, memory write and command write transactions are sent by the most significant bit first.

Each transaction starts with CS going low, and ends when CS going high. Data transactions have no limit regarding data length, so long as the memory address is continuous.

When initiating an SPI memory read transaction, the host will send two zero bits, followed by the 22-bit address. A dummy byte follows the address, and the BT81x will respond to each host byte with read data bytes.

Table 8: SPI Memory read transaction

| 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 | |
|---|---|-----------------|---|---|---|---|---|-----------------|
| 0 | 0 | Address [21:16] | | | | | | } Write Address |
| | | Address [15:8] | | | | | | |
| | | Address [7:0] | | | | | | |
| | | Dummy byte | | | | | | |
| | | Byte 0 | | | | | | } Read Address |
| | | Byte n | | | | | | |

For SPI memory write transactions, a '1' bit and '0' bit is sent by the host, followed by the 22-bit address. The write data follows.

Table 9: SPI Memory write transaction

| 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 | |
|---|---|-----------------|---|---|---|---|---|-----------------|
| 1 | 0 | Address [21:16] | | | | | | } Write Address |
| | | Address [15:8] | | | | | | |
| | | Address [7:0] | | | | | | |
| | | Dummy byte | | | | | | |
| | | Byte 0 | | | | | | } Read Address |
| | | Byte n | | | | | | |

6. BT81x Peripherals

6.1. Audio Engine

BT81x provides mono audio output through a PWM output pin, AUDIO_L. It outputs two audio sources; the sound synthesizer and audio file playback.

6.2. Sound Synthesizer

A sound processor, AUDIO ENGINE, generates the sound effects from a small ROM library of waves table. To play a sound effect listed in the Sound Effect table, load the REG_SOUND register with a code value and write 1 to the REG_PLAY register. The REG_PLAY register reads 1 while the effect is playing and returns a '0' when the effect ends. Some sound effects play continuously until interrupted or instructed to play the next sound effect. To interrupt an effect, write a new value to REG_SOUND and REG_PLAY registers; e.g. write 0 (Silence) to REG_SOUND and 1 to PEG_PLAY to stop the sound effect.

The sound volume is controlled by register REG_VOL_SOUND. The 16-bit REG_SOUND register takes an 8-bit sound in the low byte. For some sounds, marked "pitch adjust" in the table below, the high 8 bits contain a MIDI note value. For these sounds, a note value of zero indicates middle C. For other sounds the high byte of REG_SOUND is ignored.

Table 10: Sound Effect

| Value | Effect | Continuous | Pitch Adjust |
|-------|---------------|------------|--------------|
| 00h | Silence | Y | N |
| 01h | Square Wave | Y | Y |
| 02h | Sine Wave | Y | Y |
| 03h | Sawtooth Wave | Y | Y |
| 04h | Triangle Wave | Y | Y |
| 05h | Beeping | Y | Y |
| 06h | Alarm | Y | Y |
| 07h | Warble | Y | Y |

6.3. Audio Playback

The BT81x can play back recorded sound through its audio output. To do this, load the original sound data into the BT81x's RAM, and set registers to start the playback.

The registers controlling audio playback are:

| | |
|----------------------|---|
| REG_PLAYBACK_START: | The start address of the audio data |
| REG_PLAYBACK_LENGTH: | The length of the audio data, in bytes |
| REG_PLAYBACK_FREQ: | The playback sampling frequency, in Hz |
| REG_PLAYBACK_FORMAT: | The playback format, one of LINEAR SAMPLES, uLAW SAMPLES, or ADPCM SAMPLES |
| REG_PLAYBACK_LOOP: | If zero, the sample is played once. If one, the sample is repeated indefinitely |
| REG_PLAYBACK_PLAY: | A write to this location triggers the start of audio playback, regardless of writing '0' or '1'. Read back '1' when playback is ongoing, and '0' when playback finishes |
| REG_VOL_PB: | Playback volume, 0-255 |

The mono audio formats supported are 8-bits PCM, 8-bits uLAW and 4-bits IMA-ADPCM. For ADPCM_SAMPLES, each sample is 4 bits, so two samples are packed per byte, the first sample is in bits 0-3 and the second is in bits 4-7.

The current audio playback read pointer can be queried by reading the REG_PLAYBACK_READPTR. Using a large sample buffer, looping, and this read pointer, the host MPU/MCU can supply a continuous stream of audio.

6.4. General Purpose Input Output

Depending on the package, the BT81x can be configured to use up to 4 GPIO pins. These GPIO pins are controlled by the REG_GPIOX_DIR and REG_GPIOX registers. Alternatively the GPIO0 and GPIO1 pins can also be controlled by REG_GPIO_DIR and REG_GPIO to maintain backward compatibility with the FT800/FT801.

6.5. SPI NOR Flash Interface

NOR flash memory has been included with the EVE3 TFT Module, and can be accessed through SPI. The on-board flash memory will allow you to store audio files, images, animations and videos on your EVE, reducing the amount of flash memory taken up on the host side.

A specific set of commands are available to access the on-board flash. In addition, the BT81x can be configured for full speed communication with the on-board flash.

6.6. Backlight Driver

The EVE3 TFT Module comes equipped with its own backlight driver and integrated backlight control circuit, but if you are running a high brightness or 7" inch display variant, more power may need to be supplied to the display. The EVE3 Module can be configured to provide additional current through pins 17, 18, 19, and 20 by populating the R1 and R2 resistor pads with 0 Ohm resistors. With R1 and R2 populated, additional 3.3V power can be supplied to pins 17 and 18, doubling the amount of current that can be fed to the display.

Figure 13: Backlight Driver Block Diagram

6.7. Touch Configuration File

The EVE3 TFT Module can be ordered with a resistive or capacitive touch panel. Both touch variants require minimal setup in order to operate properly.

Resistive touch panel sensitivity can be increased by adjusting the resistive pressure threshold. The pressure threshold is specified through the REG_TOUCH_RZ register. A lower pressure value indicates a higher pressure threshold. It is recommended to set the pressure threshold to 1200 for testing, and adjust the value accordingly to suit your application.

The capacitive touch panel that comes with the EVE3-TPC uses a GT911 touch controller. The capacitive touch panel can be configured easily by setting the REG_TOUCH_CONFIG register to 0x05D0.

7. TFT Display

7.1. EVE3 Module Displays

The EVE3 Module is paired with a Matrix Orbital Parallel TFT display. Information about Matrix Orbital's Parallel TFT lineup, including drawings, dimensions, and tolerances can be found online at:

https://www.matrixorbital.com/index.php?route=download/download_category&dpath=178_85_229

Table 12: EVE3 Parallel Display Datasheet

| EVE3 Display | Parallel TFT Datasheet |
|--------------|------------------------|
| EVE3-29A | MOP-TFT320102-29A |
| EVE3-35A | MOP-TFT320240-35A |
| EVE3-43A | MOP-TFT480272-43A |
| EVE3-50A | MOP-TFT800480-50A |
| EVE3-70A | MOP-TFT800480-70A |

7.2. EVE3 TFT Display Timings

Table 13: EVE3 TFT Display Timings

| Display Timings | Display | | | | |
|-----------------|---------|---------|---------|---------|---------|
| | EVE3-29 | EVE3-35 | EVE3-43 | EVE3-50 | EVE3-70 |
| REG_HSIZE | 320 | 320 | 480 | 800 | 800 |
| REG_VSIZE | 102 | 240 | 272 | 480 | 480 |
| REG_HCYCLE | 408 | 408 | 548 | 928 | 928 |
| REG_HOFFSET | 70 | 68 | 43 | 88 | 88 |
| REG_HSYNC0 | 0 | 0 | 0 | 0 | 0 |
| REG_HSYNC1 | 10 | 10 | 41 | 48 | 48 |
| REG_VCYCLE | 262 | 262 | 292 | 525 | 525 |
| REG_VOFFSET | 156 | 18 | 12 | 32 | 32 |
| REG_VSYNC0 | 0 | 0 | 0 | 0 | 0 |
| REG_VSYNC1 | 2 | 2 | 10 | 3 | 3 |
| REG_PCLK | 8 | 8 | 5 | 2 | 2 |
| REG_SWIZZLE | 0 | 0 | 0 | 0 | 0 |
| REG_PCLK_POL | 0 | 0 | 1 | 1 | 1 |
| REG_CSPREAD | 1 | 1 | 1 | 0 | 0 |
| REG_DITHER | 1 | 1 | 1 | 1 | 1 |

8. Mounting

8.1. Mounting TFT Panels

Our G series extended capacitive touch EVE3 TFT Module units will come with a double sided adhesive already applied on the exposed back side of the over-sized cover glass. A 3M 93010LE tape with 300LSE adhesive is used, allowing the display to be easily mounted on flat surfaces. In addition, the tape can maintain its bond in environments of 100% relative humidity at 38°C, and can withstand temperatures up to 149°C.

Figure 14: EVE3-38G Installation

Figure 15: Completed Assembly

Resistive and Non-touch EVE modules can be mounted to panels using 3M adhesives, similar to what is applied on our G series extended capacitive touch panels. An extended metal plate with mounting points could be applied to the back of the EVE panel using adhesives to expand mounting options.

8.2. 3D Printed Cases/Mounts

A collection of 3D case designs can be found on our [Matrix Orbital Thingiverse page](#). These designs can be downloaded and modified to suit your project needs and specifications, and then printed using a 3D printer.

If you don't have access to a 3D printer, our designs are also available for purchase from our [Matrix Orbital Shapeways page](#).

9. Electrical Characteristics

9.1. Absolute Maximum Ratings

Table 14: EVE3 Module Limiting Values

| Item | Value | Unit |
|-------------------------------------|-------------------------|------|
| Storage Temperature | -30 to 80 | °C |
| Ambient Temperature (Power Applied) | -20 to +70 | °C |
| VCC Supply Voltage | 0 to +4 | V |
| DC Input Voltage | -0.5 to + (VCCIO + 0.3) | V |

9.2. EVE3 DC Characteristics

Table 15: BT81x DC characteristics

| Item | Description | Min. | Typ. | Max. | Unit | Conditions |
|------|------------------------------|------|------|------|------|-------------------|
| VCC | VCC operating supply voltage | 2.97 | 3.30 | 3.63 | V | Normal Operation |
| Icc1 | Power Down Current | - | 0.2 | - | mA | Power down mode |
| Icc2 | Sleep Current | - | 0.6 | - | mA | Sleep Mode |
| Icc3 | Standby Current | - | 3.0 | - | mA | Standby Mode |
| Icc4 | Operating Current | - | 22 | - | mA | Normal Operations |

9.3. EVE3 Digital I/O Pin Characteristics

Table 16: Digital I/O Specifications

| Parameter | Description | Min | Typ. | Max | Units | Conditions |
|-----------|----------------------------------|------------|-------|-----|-------|------------------|
| Voh | Output Voltage High | VCCIO- 0.4 | 3.3V- | - | V | Ioh=5mA |
| Vol | Output Voltage Low | - | - | 0.4 | V | Iol=5mA |
| Vih | Input High Voltage | 2.0 | - | - | V | |
| Vil | Input Low Voltage | - | - | 0.8 | V | |
| Vth | Schmitt Hysteresis Voltage | 0.22 | - | 0.3 | V | |
| Iin | Input leakage current | -10 | - | 10 | uA | Vin = VCCIO or 0 |
| Ioz | Tri-state output leakage current | -10 | - | 10 | uA | Vin = VCCIO or 0 |
| Rpu | Pull-up resistor | - | 42 | - | kΩ | |
| Rpd | Pull-down resistor | - | 44 | - | kΩ | |

9.4. Power Specifications

Table 17: Power Characteristics

| Parameter | EVE3-29A | EVE3-35A | EVE3-43A | EVE3-50A | EVE3-70A | Units |
|------------------------|----------|----------|----------|----------|----------|-------|
| EVE3 Logic | 40 | 40 | 40 | 40 | 40 | mA |
| TFT Power Supply (max) | 40 | 20 | 24 | 199.2 | 140 | mA |
| TFT Backlight | Min | 0 | 0 | 0 | 0 | mA |
| | Typ | 120 | 124 | 206 | 240 | mA |
| | Max | 144 | 149 | 247 | 288 | mA |

9.5. Touch Sense Characteristics

Table 18: Touch Panel characteristics

| Parameter | Description | Min | Typ. | Max | Units | Conditions |
|-----------|--|------|------|------|------------|------------|
| Rsw-on | X-,X+,Y- and Y+ Drive On resistance | - | 6 | 10 | Ω | VCCIO=3.3V |
| Rsw-off | X-,X+,Y- and Y+ Drive Off resistance | 10 | - | - | M Ω | |
| Rpu | Touch sense pull up resistance | 78 | 100 | 125 | k Ω | |
| Vth+ | Touch Detection rising-edge threshold on XP pin | 1.59 | - | 2.04 | V | VCCIO=3.3V |
| Vth- | Touch Detection falling-edge threshold on XP pin | 1.23 | - | 1.55 | V | VCCIO=3.3V |
| RI | X-axis and Y-axis drive load resistance | 200 | - | - | Ω | |

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
