

MPX5100, 0 to 100 kPa, Differential, Gauge, and Absolute, Integrated, Pressure Sensors

The MPX5100 series piezoresistive transducer is a state-of-the-art monolithic silicon pressure sensor designed for a wide range of applications, but particularly those employing a microcontroller or microprocessor with A/D inputs. This patented, single element transducer combines advanced micromachining techniques, thin-film metallization, and bipolar processing to provide an accurate, high-level, analog output signal that is proportional to the applied pressure.

Features

- 2.5% maximum error over 0 to 85 °C
- Ideally suited for microprocessor or microcontroller-based systems
- Patented silicon shear stress strain gauge
- Available in absolute, differential and gauge configuration
- Durable epoxy unibody element
- Easy-to-use chip carrier option

Typical applications

- Patient monitoring
- Process control
- Pump/motor control
- Pressure switching
- White goods

Related Documentation

The MPX5100 device features and operations are described in a variety of reference manuals, user guides, and application notes. To find the most-current versions of these documents:

1. Go to the NXP homepage at:
<http://www.nxp.com/>
2. In the Keyword search box at the top of the page, enter the device number MPX5100.
3. In the Refine Your Result pane on the left, click on the Documentation link.

MPX5100

1 General Description

1.1 MPX5100AP/DP/GP Block diagram

Figure 1 shows a block diagram of the internal circuitry integrated on a pressure sensor chip in a unibody package.

2 Mechanical and Electrical Specifications

2.1 Maximum ratings

Table 3. Maximum ratings⁽¹⁾

Rating	Symbol	Value	Unit
Maximum pressure	$P_{\max}$	400	kPa
Storage temperature	T_{stg}	-40 to +125	°C
Operating temperature	T_A	-40 to +125	°C

1. Exposure beyond the specified limits may cause permanent damage or degradation to the device.

2.2 Operating characteristics

Table 4. Operating characteristics ($V_S = 5 \text{ Vdc}$, $T_A = 25 \text{ °C}$.)

Characteristic	Symbol	Min	Typ	Max	Unit
Pressure range ⁽¹⁾ Gauge, differential: MPX5100G/MPXV5100G Absolute: MPX5100AP	P_{OP}	0 15	— —	100 115	kPa
Supply voltage ⁽²⁾	V_S	4.75	5.0	5.25	V_{DC}
Supply current	I_O	—	7.0	10	mAdc
Minimum pressure offset ⁽³⁾ , (0 to 85 °C) @ $V_S = 5.0 \text{ V}$	V_{OFF}	0.088	0.20	0.313	V_{DC}
Full-scale output ⁽⁴⁾ , differential and absolute (0 to 85 °C) @ $V_S = 5.0 \text{ V}$	V_{FSO}	4.587	4.700	4.813	V_{DC}
Full-scale Span ⁽⁵⁾ , differential and absolute (0 to 85 °C) @ $V_S = 5.0 \text{ V}$	V_{FSS}	—	4.500	—	V_{DC}
Accuracy ⁽⁶⁾	—	—	—	±2.5	% V_{FSS}
Sensitivity	V/P	—	45	—	mV/kPa
Response time ⁽⁷⁾	t_R	—	1.0	—	ms
Output source current at full-scale output	I_{O+}	—	0.1	—	mAdc
Warm-up time ⁽⁸⁾	—	—	20	—	ms
Offset stability ⁽⁹⁾	—	—	±0.5	—	% V_{FSS}

1. 1.0 kPa (kiloPascal) equals 0.145 psi.

2. Device is ratiometric within this specified excitation range.

3. Offset (V_{OFF}) is defined as the output voltage at the minimum rated pressure.

4. Full-scale output (V_{FSO}) is defined as the output voltage at the maximum or full-rated pressure.

5. Full-scale span (V_{FSS}) is defined as the algebraic difference between the output voltage at full-rated pressure and the output voltage at the minimum rated pressure.

6. Accuracy (error budget) consists of the following:

Linearity: Output deviation from a straight line relationship with pressure over the specified pressure range.

Temperature hysteresis: Output deviation at any temperature within the operating temperature range, after the temperature is cycled to and from the minimum or maximum operating temperature points, with zero differential pressure applied.

Pressure hysteresis: Output deviation at any pressure within the specified range, when this pressure is cycled to and from minimum or maximum rated pressure at 25 °C.

TcSpan: Output deviation over the temperature range of 0 to 85 °C, relative to 25 °C.

TcOffset: Output deviation with minimum pressure applied over the temperature range of 0 to 85 °C, relative to 25 °C.

Variation from nominal: The variation from nominal values, for offset or full-scale span, as a percent of V_{FSS} at 25 °C.

7. Response time is defined as the time for the incremental change in the output to go from 10% to 90% of its final value when subjected to a specified step change in pressure.

8. Warm-up time is defined as the time required for the product to meet the specified output voltage after the pressure has been stabilized.

9. Offset stability is the product's output deviation when subjected to 1000 hours of pulsed pressure, temperature cycling with bias test.

3 On-chip Temperature Compensation and Calibration

Figure 5 shows the sensor output signal relative to pressure input. Typical, minimum, and maximum output curves are shown for operation over a temperature range of 0 to 85 °C using the decoupling circuit shown in Figure 7. The output will saturate outside of the specified pressure range.

Figure 6 illustrates both the Differential/Gauge and the Absolute Sensing Chip in the basic chip carrier. A fluorosilicone gel isolates the die surface and wire bonds from the environment, while allowing the pressure signal to be transmitted to the sensor diaphragm.

The MPX5100 series pressure sensor operating characteristics, and internal reliability and qualification tests are based on use of dry air as the pressure media. Media, other than dry air, may have adverse effects on sensor performance and long-term reliability. Contact the factory for information regarding media compatibility in your application.

Figure 5. Output versus pressure differential

Figure 6. Cross-sectional diagrams (not-to-scale)

Figure 7 shows the recommended decoupling circuit for interfacing the output of the integrated sensor to the A/D input of a microprocessor or microcontroller. Proper decoupling of the power supply is recommended.

Figure 7. Recommended power supply decoupling and output filtering
(For additional output filtering, please refer to application note AN1646.)

The following figures show the nominal transfer function, temperature and pressure error over the operating range for the MPX5100D,MPX5100G and MPXV5100G devices.

Nominal Transfer Value:

$$V_{OUT} = V_S (P \times 0.009 + 0.04)$$

$$\pm (\text{Pressure Error} \times \text{Temp. Mult.} \times 0.009 \times V_S)$$

$$V_S = 5.0 \text{ V} \pm 0.25 \text{ V}$$

Figure 8. Transfer function (MPX5100D, MPX5100G, MPXV5100G)

Figure 9. Temperature error multiplier (MPX5100D, MPX5100G, MPXV5100G)

Figure 10. Pressure error band (MPX5100D, MPX5100G, MPXV5100G)

The following figures show the nominal transfer function, temperature and pressure error over the operating range for the MPX5100AP device.

Nominal Transfer Value: $V_{OUT} = V_S (P \times 0.009 - 0.095)$
 $\pm (\text{Pressure Error} \times \text{Temp. Mult.} \times 0.009 \times V_S)$
 $V_S = 5.0 \text{ V} \pm 0.25 \text{ V}$

Figure 11. Transfer function (MPX5100AP)

Figure 12. Temperature error multiplier (MPX5100AP)

Figure 13. Pressure error band (MPX5100AP)

4 Package Information

4.1 Pressure (P1)/Gauge (P2) side identification table

NXP designates the two sides of the pressure sensor as the Pressure (P1) side and the Gauge (P2) side. The Pressure (P1) side is the side containing fluoro-silicone gel which protects the die from harsh media. The MPX pressure sensor is designed to operate with positive differential pressure applied, $P1 > P2$.

The Pressure (P1) side may be identified by using the table below.

Part number	Package	Pressure (P1) side identifier
MPX5100AP, MPX5100GP	98ASB42796B	Side with port attached
MPX5100DP	98ASB42797B	Side with part marking
MPXV5100DP	98ASA99255D	Side with part marking
MPXV5100GC6U	98ASB17757C	Side with port attached
MPXV5100GC7U	98ASB17759C	Side with port attached
MPXV5100GP	98ASA99303D	Side with port attached

4.2 Minimum recommended footprint for surface mounted applications

Surface mount board layout is a critical portion of the total design. The footprint for the surface mount packages must be the correct size to ensure proper solder connection interface between the board and the package. With the correct footprint, the packages will self align when subjected to a solder reflow process. It is always recommended to design boards with a solder mask layer to avoid bridging and shorting between solder

Figure 14. Small outline package footprint

4.3 Package dimensions

5 Revision History

Table 5. Revision history

Revision number	Revision date	Description of changes
14	12/2018	- Deleted obsolete part numbers MPX5100A and MPX5100D. - Changed format to new corporate format. - Added pinout for MPX5100AP/DP/GP in Figure 2. - Added pin functions for MPX5100AP/DP/GP as Table 1. - Added pinout for MPXV5100DP/GC6U/GC7U/GP as Figure 4. - Added pin functions for MPXV5100DP/GC6U/GC7U/GP as Table 2. - Moved section 5.1, Package dimensions to Section 4.3. - Deleted section 5, duplicate Package Information information section. - Added revision history as Table 5.

Rev. 14

12/2018

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
