

PROPER USE GUIDELINES

Cumulative Trauma Disorders can result from the prolonged use of manually powered hand tools. Hand tools are intended for occasional use and low volume applications. A wide selection of powered application equipment for extended-use, production operations is available.

1. INTRODUCTION

This instruction sheet covers tooling selections for crimping, inserting, and extracting screw-machine contacts, and manual application procedures. Application procedures for the other tools are packaged with the tool. Read these instructions thoroughly before making any selections.

NOTE

Dimensions in this instruction sheet are in millimeters [with inches in brackets]. Figures and illustrations are for reference only and are not drawn to scale.

Reasons for reissue of this instruction sheet are provided in Section 7, REVISION SUMMARY.

2. DESCRIPTION

The screw-machine contacts are supplied in loose-piece for manual (4/8-indent hand crimping tools) application and tape mounted for power assisted (machine) application. Insertion and extraction tools are used to insert contacts into and extract contacts from connectors. See Figure 1.

The military uses a standardized numbering system which pertains to the tools that are qualified to military specifications (spec). Refer to Figure 2 for a cross-reference of these tools.

Description	Part Number	Military Spec
4/8-Indent Hand Crimping Tool	601966-1	MIL-C-22520/2-01
	601967-1	MIL-C-22520/1-01
	608651-1	---
Positioner or Turret Head	601966-2	MIL-C-22520/2-02
	601966-4	MIL-C-22520/2-06
	601966-5	MIL-C-22520/2-08
	601966-6	MIL-C-22520/2-09
	601966-8	MIL-C-22520/2-23
	601967-2	MIL-C-22520/1-02
	1-601967-2	MIL-C-22520/1-11
Insertion/Extraction Tool	91066-1	MIL-I-81969/1-01 or MS3156-22
	91067-1	MIL-I-81969/1-04
	91067-2	MIL-I-81969/1-02 or MS3156-20
	91066-3	MIL-I-81969/1-03 or MS3156-16
Extraction Tool	445147-1	MIL-C-81969/28-02
	58284-1	MIL-C-81969/28-03
	91074-1	MIL-C-81969/28-01 or MS3178-001

Figure 2

Refer to Figure 3 for proper contact and tooling combination. Read the chart from the left page across to the right page.

■ Military Spec MIL-C-22520/1-05

3. TOOLING ASSEMBLY

3.1. Installing Positioner

Refer to Figure 4, and proceed as follows:

1. Squeeze the tool handles together, then allow the handles to FULLY open.

The tool handles must be fully opened when installing the positioner; otherwise, damage to the tool will occur.

2. Insert the post of the positioner into the hole in the back of the tool. Make sure that the bayonet pin enters the slot in the retainer ring of the tool.

Installing Positioner

Figure 4

3. Firmly grip the outer rim of the positioner and push until the spring inside the positioner is depressed, then rotate the positioner *clockwise* until it stops.
4. Insert the tool safety clip into the retainer ring to lock the positioner in place.
5. Determine the selector setting according to the contact size and wire size listed in Figure 3 (or

refer to the data plate on the positioner. Pull the selector knob and turn to the proper setting.

The tool handles must be fully opened when changing the positioner selector setting; otherwise, damage to the tool will occur.

3.2. Installing Turret Head

Refer to Figure 5, and proceed as follows:

1. Squeeze the tool handles together, then allow the handles to FULLY open.

The tool handles must be fully opened when installing the positioner; otherwise, damage to the tool will occur.

2. Depress the turret trigger to release the turret from the index position (the turret should be extended).

Installing Turret Head

Figure 5

3. Place the back of the turret head over the retainer ring on the back of the tool. Make sure that the turret head is seated, then tighten the two socket head cap screws of the turret head.
4. Rotate the turret until the positioner marked with the desired contact size is aligned with the index mark.
5. Press the turret until it is in the locked position.
6. Determine the selector setting according to the contact size and wire size listed in Figure 3. Pull the selector knob and turn to the proper setting.

The tool handles must be fully opened when changing the positioner selector setting; otherwise, damage to the tool will occur.

4. CRIMPING PROCEDURE

These tools have a ratchet which ensures proper crimping of the contacts. Once engaged, the ratchet will NOT release until the tool handles are FULLY closed.

1. Strip the wire according to the wire size listed in Figure 3.
2. Squeeze the tool handles together, then allow the handles to FULLY open.
3. Insert the mating end of the contact into the indenter from the FRONT of the tool until the contact bottoms. Refer to Figure 6.

Figure 6

4. Insert the wire into the contact wire barrel. While holding the wire in place, squeeze the tool handles until the ratchet releases. Allow the handles to open.
5. Remove the crimped contact from the tool. Inspect the contact according to the applicable application specification (114-series).

5. MAINTENANCE AND INSPECTION

5.1. Daily Maintenance

Each operator should be aware of, and responsible for, the following steps of daily maintenance, to ensure continuous quality and reliability of each tool.

1. Remove dust, moisture, and other contaminants with a clean brush, or soft, lint-free cloth. DO NOT use objects that could damage the tool.
2. When the tool is not in use, keep the handles closed, and store the tool in a clean, dry area.

5.2. Gaging the Die Opening (Indenters)

This inspection requires the use of a plug gage conforming to the dimensions provided in Figure 7. For plug gages used for periodic general inspection, see Figure 8. To gage the die opening, proceed as follows:

1. Remove traces of oil or dirt from the die opening and plug gage.
2. Fully close tool handles; then hold in this position. DO NOT force beyond initial contact.
3. Insert GO element into the die opening; but do not force it. The GO element must pass through the length of the die opening. See Figure 9.
4. In the same manner, try to insert the NO-GO element into the die opening. The NO-GO element may enter partially, but must not pass completely through the length of the die opening. See Figure 9.

Be careful NOT to crimp the gage element.

If the die opening conforms to the gage inspection, the tool may be considered dimensionally correct and should be lubricated with a THIN coat of any good SAE 20 motor oil. If the die opening does NOT conform to the gage inspection, the tool must be returned for further evaluation and repair.

For additional information regarding the use of a plug gage, refer to 408-7424.

5.3. Crimp Height Inspection

Allowances for tool stresses and relaxation of contact material were calculated into the crimp height measurements for military specified contacts only.

This inspection requires the use of a micrometer, or equivalent, as shown in Figure 10. It is recommended using the micrometer (Dial Micrometer 27-9) which may be purchased from:

B.C. Ames Company
Lexington Street
Waltham, MA 02154

Suggested Plug Gage Design

TOOL (Military Spec)	TOOL SELECTOR SETTING	GAGE ELEMENT DIAMETER ± 0.003 [.0001]	
		GO	NO-GO
601966-1 (MIL-C-22520/2-01)	1	0.33 [.013]	0.46 [.018]
	2	0.41 [.016]	0.53 [.021]
	3	0.48 [.019]	0.61 [.024]
	4	0.56 [.022]	0.69 [.027]
	5	0.66 [.026]	0.79 [.031]
	6	0.76 [.030]	0.89 [.035]
	7	0.86 [.034]	0.99 [.039]
	8•	0.99 [.039]•	1.12 [.044]•
608651-1	1	1.78 [.070]	2.03 [.080]
	2	1.91 [.075]	2.16 [.085]
	3	2.03 [.080]	2.29 [.090]
	4•	2.16 [.085]•	2.41 [.095]•
	5	2.34 [.092]	2.59 [.102]
	6	2.51 [.099]	2.77 [.109]
	7	2.74 [.108]	3.00 [.118]
	8	3.00 [.118]	3.25 [.128]
601967-1 (MIL-C-22520/1-01) and 608668-1	1	0.71 [.028]	0.84 [.033]
	2	0.81 [.032]	0.94 [.037]
	3	0.91 [.036]	1.04 [.041]
	4•	0.99 [.039]•	1.12 [.044]•
	5	1.14 [.045]	1.27 [.050]
	6	1.32 [.052]	1.45 [.057]
	7	1.50 [.059]	1.63 [.064]
	8	1.73 [.068]	1.85 [.073]

- Use for periodic general inspection. The plug gages listed in Figure 8 conform to these gage element diameters.

Figure 7

For Periodic General Inspection

TOOL	TOOL SELECTOR SETTING	PLUG GAGE (Military Spec)
601966-1	8	601968-1 (MIL-C-22520/3-01)
601967-1	4	
608668-1	4	
608651-1	4	601968-3

Figure 8

Gaging the Die Opening

GO element must pass completely through the die opening.

NO-GO element may enter partially, but must not pass completely through the die opening.

Figure 9

To inspect the crimp height, proceed as follows:

1. Crimp the contact according to Section 3, CRIMPING PROCEDURE.
2. Measure across opposite indents in the contact, then rotate the contact 90 degrees, and measure again. See Figure 10. DO NOT go beyond initial contact as this could cause a depression and result in an inaccurate reading.

Crimp Height Inspection

TOOL SELECTOR SETTING	CRIMP HEIGHT	
	TOOL 601966-1 Military Spec MIL-C-22520/2-01	TOOL 601967-1 Military Spec MIL-C-22520/1-01
1	0.406-0.533 [.016-.021]	0.813-0.940 [.032-.037]
2	0.483-0.610 [.019-.024]	0.914-1.041 [.036-.041]
3	0.559-0.686 [.022-.027]	1.016-1.143 [.040-.045]
4	0.635-0.762 [.025-.030]	1.092-1.219 [.043-.048]
5	0.737-0.864 [.029-.034]	1.245-1.372 [.049-.054]
6	0.838-0.965 [.033-.038]	1.422-1.549 [.056-.061]
7	0.940-1.067 [.037-.042]	1.600-1.727 [.063-.068]
8	1.067-1.194 [.042-.047]	1.829-1.956 [.072-.077]

Figure 10

3. Check the height of the crimped contact against the crimp height dimensions shown in Figure 10. If the crimp height conforms to that shown, the tool is considered dimensionally correct. Lubricate the tool with a thin coat of any good SAE 20 motor oil and return it to service.

6. REPLACEMENT AND REPAIR

Order replacement parts through your Tyco Electronics Representative, or call 1-800-526-5142, or send a facsimile of your purchase order to 717-986-7605, or write to:

CUSTOMER SERVICE (038-035)
TYCO ELECTRONICS CORPORATION
PO BOX 3608
HARRISBURG PA 17105-3608

For customer repair service, contact a Tyco Electronics Representative at 1-800-526-5136.

7. REVISION SUMMARY

- Updated document to corporate requirement
- New format
- Deleted duplicate part number in Figure 2

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
