<DIMENSION TABLE>

HRS	DRAWING NO.	EDC-370587-00-00	
	PART NO.	FH58- ** S-0. 2SHW	
	CODE NO.	CL580-	1 4 9

This connector features small and thin, requiring delicate and careful handling.
To prevent connector/FPC breakage and contact failure (mating failure, FPC pattern breakage, etc),
read through the instructions shown below and handle the connector properly.

[Connector Part Nomenclature]

[Operation and Precautions]

1. Initial condition

Actuator does not have to be operated before inserting FPC,
as the connector is delivered with the actuator opened.

[Caution]

- Do not close the actuator before inserting FPC.
Closing the actuator without FPC could make the contact gap smaller, which could increase the FPC insertion force. (Example1)
- Do not insert FPC or operate actuator before mounting. (Example1)

2. How to insert FPC

Insert the FPC into the connector opening horizontally to the PCB plane.
Insert it properly to the very end. (Example2)

[Caution]

- Do not insert the FPC with the actuator closed. (Example3)
- Do not twist the FPC to up and down, right and left or an angle. (Example4)

Example3

Example4

3. FPC insertion check

Chucking metals guide the FPC tabs to the correct position.

Make sure that the FPC tabs are located in proper position as shown in the figure below after FPC insertion. (Example5)

[Caution]

- Do not insert the FPC at an angle and/or stop it before insertion is completed. (Example6)(Example7)

Example5

Example6

4. How to lock

The actuator rotates around the rotational axis as shown below.
Apply load to rotate the actuator by 90 degree after inserting the FPC. (Example8)

[Caution]

- To close the actuator, operate at the center of the actuator. (Example9)
- To close the actuator, do not operate the actuator at one end only. (Example10)
- Do not rotate the actuator to the counter direction. (Example11)
- Do not push out the actuator horizontally. (Example12)
- Do not operate the actuator while the upper contact arm is pressed down. (Example13)
- Do not pick the actuator to lift. (Example14)
- Operate the actuator by hand without using sharp tool such as Tweezers. (Example15)
- Do not apply excess force to the housing during the operation. (Example16)

Example8 Actuator movable range
(Side view)

Example9

Close the actuator at the center

Example10

Do not operate the actuator
at one end only

Example11

Example12

Example13

Example14

Example15

Example16

Do not apply excess force
to the housing during the operation.

5. Mating confirmation of the FPC

Visually confirm the FPC positioning after closing the actuator. (Example17)

[Caution]

-Do not insert the FPC at an angle and/or stop it before insertion is completed. (Example18)(Example19)

Example17

Example18

Example19

6. How to unlock

Slowly flip up the actuator to release the lock. (Example20)

[Caution]

- To open the actuator, operate at the center of the actuator. (Example21)
- To open the actuator, do not operate the actuator at one end only. (Example22)
- The actuator is opened up to the movable limit, 90 degree. (Example23)
- Do not open the actuator beyond the specified degree or apply excess force to the actuator.
- Open the actuator right above.
- Do not attempt to open further or to open it by applying horizontal force as this may cause its damage. (Example24)
- Do not pick the actuator to lift. (Example25)
- Operate the actuator by hand without using sharp tool such as Tweezers. (Example26)
- Do not apply excess force to the housing during the operation. (Example27)
- Please note that the connector is back flip style connector, and the opening for FPC insertion and the actuator face the opposite direction.
- Do not try to lift the actuator at the FPC insertion opening side. (Example28)

7. How to remove FPC

After rotating the actuator to the fully opened position carefully withdraw the FPC pulling out horizontally. (Example29)

[Caution]

- This connector has a temporary FPC holding structure with chucking metals.
- For FPC removal, do not pull out the FPC upward or angled direction. (Example30)
- Do not attempt to pull the FPC without unlocking the actuator (Example31).

Example29

Example30

Example31

[Precautions for component layout]

Depending on a FPC rounding, a load is applied to the connector, and a contact failure may occur. To prevent a failure, take the following notes into a consideration during mechanism design.

[Caution]

- Avoid applying forces to FPC in vertical or horizontal directions. (Example32)(Example34)
- In addition, avoid pulling up and down on the FPC.
- When fixing FPC after FPC cabling, avoid pulling FPC, and route the wire FPC with slack. In this regard, the stiffener is parallel to the PCB. (Example33)
- During FPC wiring, ensure that stress is not applied directly to the connector. Do not bend the FPC excessively near the connector during use, or it may cause contact failure or FPC breakage. Stabilizing the FPC is recommended. (Example34)
- Do not mount other components touching to the FPC underneath the FPC stiffener. (Example35)
- Make adjustments with the FPC manufacturer for FPC bending performance and wire breakage.
- Keep a sufficient FPC insertion space in the stage of the layout in order to avoid incorrect FPC insertion. Appropriate FPC length and component layout are recommended for assembly ease.
- Too short FPC length makes assembly difficult.
- Keep spaces for the actuator movement and its operation for PCB design and component layout.

[Instructions for mounting on the PCB]

Follow the instructions shown below when mounting on the PCB.

[Caution]

- Refer to recommended layouts on the page 1 for PCB and stencil pattern.
- Shorter pattern width than the recommended PCB dimension, could cause solder wicking and/or flux penetration.
- Larger pattern than the recommended stencil dimension, could cause solder wicking and/or flux penetration.
- Clearance underneath the contact and the housing is very small.
In case solder resist and/or silk screening are applied on PCB underneath the connector, verify the thickness, or it could push up the connector bottom and may cause soldering defect and/or insufficient fillet formation.
- Apply reflow temperature profile within the specified conditions.
In individual applications, the actual temperature may vary, depending on solder paste type, volume/thickness and PCB size/thickness. Consult your solder paste and equipment manufacturer for specific recommendations.
- Prevent warpage of PCB, where possible, since it can cause soldering failure even with 0.1 mm max coplanarity.
- When mounting on the flexible board, please make sure to put a stiffener on the backside of the flexible board.
We recommend a glass epoxy material with the thickness of 0.3 mm min.
- Do not add 0.5 N or greater external force when unreel or pick and place the connector etc, or it may get broken.

[Instructions for PCB handling after mounting the connector]

Follow the instructions shown below when mounting on the PCB.

[Caution]

- Splitting a large PCB into several pieces
 - Screwing the PCB
- Avoid the handling described above so that no force is exerted on the PCB during the assembly process. Otherwise, the connector may become defective.
- The warp of a 100 mm wide PCB should be 0.5 mm or less.
The warp of PCB suffers stress on connector and the connector may become defective. (Example 36)

[Instructions on manual soldering]

Follow the instructions shown below when soldering the connector manually during repair work, etc.

[Caution]

- Do not perform manual soldering with the FPC inserted into the connector.
 - Do not heat the connector excessively. Be very careful not to let the soldering iron contact any parts other than connector leads. Otherwise, the connector may be deformed or melt.
 - Do not supply excessive solder (or flux).
- If excessive solder (or flux) is supplied on the terminals or chucking metals, solder or flux may adhere to the contacts or rotating parts of the actuator, resulting in poor contact or a rotation failure of the actuator. Supplying excessive solder to the chucking metals may hinder actuator rotation, resulting in breakage of the connector.

		1/9

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
