

PROTECTION PRODUCTS

Description

μClamp® TVS diodes are designed to protect sensitive electronics from damage or latch-up due to EOS, lightning, CDE, and ESD. They feature large cross-sectional area junctions for conducting high transient currents. These devices offer desirable characteristics for board level protection including fast response time, low operating and clamping voltage, and no device degradation.

μClamp®3381P features extremely good protection characteristics highlighted by high surge current capability (25A, $t_p=8/20\mu s$), low peak ESD clamping voltage, and high ESD withstand voltage ($\pm 30kV$ contact per IEC 61000-4-2). Typical dynamic resistance is among the industry's best at 0.025 Ohms. Each device will protect one data or power line operating at 3.3 Volts.

μClamp3381P is in a 2-pin SGP1006N2 package measuring 1.0 x 0.6 x 0.5mm. Leads are spaced at a pitch of 0.65mm and feature a lead-free finish. The combination of small size, low operating voltage, and high ESD surge capability makes them ideal for protection of voltage bus lines in optical modules, LCD televisions, and tablet computers.
