The TRACOPOWER TPC series is a family of lightweight DIN-rail power supplies with an excellent price/performance ratio. They consume sparse standby power, and operate with high efficiency to comply with the requirements of the European Ecodesign directive. They have universal input of 85-264VAC or 90-375VDC and are designed for class I operation in industrial and residential environments. With the optional active current sharing redundancy module, these power supplies provide a very reliable true redundant DC supply. For further details see page 3.

TPC-REM240-24 Redundancy Module

| Order Code | Nominal Input Voltage | Max Power per Input | Output Voltage adjustable | Output Current max. |
|---------------|-----------------------|---------------------|---------------------------|---------------------|
| TPC-REM240-24 | 24 VDC | 120 W | 24 – 27 VDC | 10 A |
| TPC-REM240-48 | 48 VDC | | 48 – 55 VDC | 5 A |

These modules are external units for operation with two TPC power supplies with output voltage of 24 VDC or 48 VDC and of same type and power. The modules allow to connect two outputs of TPC power supplies together in order to achieve a reliable DC supply. In normal operation the module achieves equal current share for both power supplies connected. During the redundancy operation, if one of the power supplies fails, the output power will be provided in full by the remaining operating power supply. The redundancy of the DC system is monitored by a DC-OK signal.
