### Functional Diagram

### General Description

The HMC264LC3B is a 21 - 31 GHz Sub-harmonically Pumped (x2) MMIC Mixer with an integrated LO amplifier in a leadless "Pb Free" SMT package. The 2LO to RF isolation is excellent at 30 dB, eliminating the need for additional filtering. The LO amplifier is a single bias (+3V to +4V) design with only -4 to +4 dBm drive requirement. The RF and LO ports are DC blocked and matched to 50 Ohms for ease of use while the IF covers DC to 6 GHz. The HMC264LC3B eliminates the need for wire bonding, allowing use of surface mount manufacturing techniques.

**Pin Descriptions**

Pin Number	Function	Description	Interface Schematic
1	Vdd	Power supply for the LO Amplifier. External RF bypass capacitors are required as close to the package as possible.	
2, 3	N/C	No connection required. These pins may be connected to RF/DC ground without affecting performance.	
4, 6, 7, 9, 10, 12	GND	Package bottom must also be connected to RF/DC ground.	
5	LO	LO Port. This pin is AC coupled and matched to 50 Ohms from 10.5 - 15.5 GHz.	
8	IF	IF Port. This pin is DC coupled and should be DC blocked externally using a series capacitor whose value has been chosen to pass the necessary IF frequency range. Any applied DC voltage to this pin will result in die non-function and possible die failure.	
11	RF	RF Port. This pin is AC coupled and matched to 50 Ohms from 21 - 31 GHz.

The circuit board used in this application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation board should be mounted to an appropriate heat sink. The evaluation circuit board shown is available from Hittite upon request.
