1. Use the sheathed platinum resistance thermometer if condensation is likely to result.
 2. Be sure that the thermometer is free of vibration or shock if high temperatures are measured.

Enclosed-terminal Models

E52-P□C

Dimensions

Dimensions are given in millimeters, except for the length (L), which is provided in centimeters.

- Note:** 1. The length L is in centimeters, but "40" is 40 millimeters.
Therefore, for the E52-P20C, $L = 20$ (cm), the protective tubing length $L - 40 = 200 - 40 = 160$ mm.
2. The length L is in centimeters, but "50" is 50 millimeters.
Therefore, for the E52-P75C: $L = 75$ (cm), the protective tubing length $L - 50 = 750 - 50 = 700$ mm.
3. Terminal box: The permissible temperature is 0°C to 80°C.

Note 2: JIS special ceramic (PT0)	Recrystallized alumina, fused alumina, etc.	1,700°C (See note.)

Note: The permissible temperature given for the protective tubing is higher than 1,400°C, but the permissible temperature of the thermocouple element wire is only 1,400°C. Therefore, the protective tubing of the E52-PR□□ can withstand high temperatures momentarily to the levels given in the table as exceptions, but the element wire will deteriorate quickly if the thermocouple is used regularly at temperatures that exceed the permissible temperature for the element wire.

Compensating Conductors

The material of the Compensating Conductor is the same as or similar to that of the Thermocouple. Therefore, the Thermocouple can be connected to the Compensating Conductor just as if the length of the Thermocouple is to be extended. A standard model for a temperature range between -20°C and 70°C and two types of heat-resistive models for a temperature range between 0°C and 150°C are available.

Be sure to use the compensating conductor for the extension of the length of the thermocouple.
