

# Low-Voltage, Dual SPDT, Audio Clickless Switches with Negative Rail Capability

## General Description

The MAX4744/MAX4744H/MAX4745/MAX4745H/MAX4746H dual SPDT (single-pole/double-throw) audio switches feature negative signal capability that allows signals as low as  $V_{CC} - 5.5V$  to pass through without distortion. These analog switches have a low on-resistance and low supply current, and operate from a single +1.8V to +5.5V supply.

The MAX4744/MAX4744H have internal shunt resistors that automatically discharge the capacitance at the normally open (NO) and normally closed (NC) terminals when they are not connected. The MAX4746H features internal shunt resistors on NC\_ terminals. This reduces click-and-pop sounds that occur when switching audio signals between precharged points. A break-before-make feature further reduces popping. The MAX4744/MAX4745 control the switches with two control bits CB1 and CB2. The MAX4744H/MAX4745H/MAX4746H have one control bit to switch both switches and an enable input  $\overline{EN}$  to put the switches in a high-impedance mode. The MAX4744H/MAX4745H/MAX4746H also have an internal protection network against voltages applied to COM\_ when  $V_{CC} = 0V$ .

These devices are available in a space-saving 10-pin  $\mu$ DFN (2mm x 2mm) package and operate over the -40°C to +85°C extended temperature range.

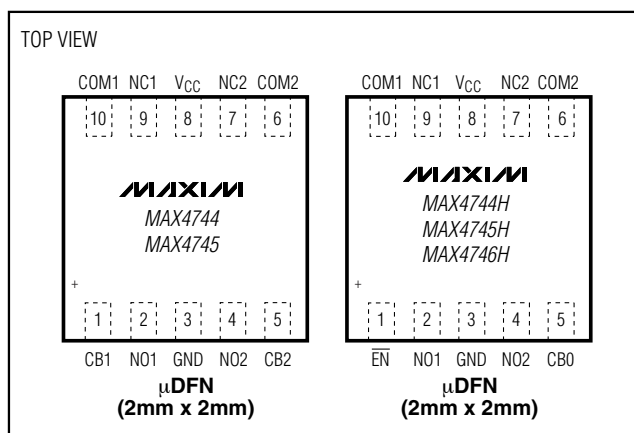

## Applications

Speaker Switching  
Power Routing  
Cellular Phones  
MP3 Players  
PDAs and Other Handheld Devices  
Notebook Computers

## Features

- ◆ Distortion-Free Negative Signal Throughput Down to  $V_{CC} - 5.5V$
- ◆ Internal Shunt Resistor Reduces Click/Pop (MAX4744/MAX4744H)
- ◆ 0.6 $\Omega$  (typ) Low On-Resistance
- ◆ 0.1 $\Omega$  (max) Channel-to-Channel Matching
- ◆ 0.55 $\Omega$  (max) On-Resistance Flatness
- ◆ +1.8V to +5.5V Single-Supply Voltage
- ◆ 0.01% (typ) Total Harmonic Distortion
- ◆ -75dB (typ) Crosstalk (100kHz)
- ◆ -68dB (typ) Off-Isolation (100kHz)
- ◆ Available in 10-Pin  $\mu$ DFN Package (2mm x 2mm)

## Pin Configurations

## Ordering Information/Selector Guide

PART	PIN-PACKAGE	TOP MARK	CLICKLESS	COM PROTECTION	PKG CODE
MAX4744ELB+T	10 $\mu$ DFN-10	+AAF	Yes	No	L1022-1
MAX4744HELB+T	10 $\mu$ DFN-10	+AAG	Yes	Yes	L1022-1
MAX4745ELB+T	10 $\mu$ DFN-10	+AAH	No	No	L1022-1
MAX4745HELB+T	10 $\mu$ DFN-10	+AAI	No	Yes	L1022-1
MAX4746HELB+T	10 $\mu$ DFN-10	+AAM	Yes, on NC_	Yes	L1022-1

**Note:** All devices are specified over the -40°C to +85°C operating temperature range.

+Denotes a lead-free package.

## Detailed Description

The MAX4744/MAX4744H/MAX4745/MAX4745H/MAX4746H are low on-resistance, low-voltage, dual-SPDT analog switches that operate from a +1.8V to +5.5V single supply. These devices feature a negative signal capability that allows signals as low as V<sub>CC</sub> - 5.5V to pass through without distortion.

The MAX4744/MAX4745 feature two digital control bits to control each switch independently (see Table 1). The MAX4744H/MAX4745H/MAX4746H have one control bit to switch both switches and an enable input  $\overline{EN}$  to put the switches in a high-impedance mode. Driving  $\overline{EN}$  low takes the switches out of high impedance and CB0 controls both switches (see Table 2).

The MAX4744/MAX4744H have internal shunt resistors on all NO and NC terminals, and the MAX4746H has internal shunt resistors on NC terminals to suppress click-and-pop sounds that can occur when switching audio signals between precharged points.

## Applications Information

### Digital Control Inputs

The MAX4744/MAX4744H/MAX4745/MAX4745H/MAX4746H logic inputs accept up to +5.5V, regardless of supply voltage. For example, with a +3.3V supply, CB0, CB1, CB2, and  $\overline{EN}$  can be driven low to GND and

Table 1. MAX4744/MAX4745 Truth Table

CONTROL		SWITCH STATE	
CB1	CB2	Switch 1	Switch 2
0	0	Connected to NC1	Connected to NC2
0	1	Connected to NC1	Connected to NO2
1	0	Connected to NO1	Connected to NC2
1	1	Connected to NO1	Connected to NO2

Table 2. MAX4744H/MAX4745H/MAX4746H Truth Table

CONTROL		SWITCH STATE	
$\overline{EN}$	CB0	Switch 1	Switch 2
0	0	Connected to NC1	Connected to NC2
0	1	Connected to NO1	Connected to NO2
1	X	High Impedance	High Impedance

X = Don't Care

high to +5.5V, allowing for mixed logic levels in a system. Driving CB0, CB1, CB2, and  $\overline{EN}$  rail-to-rail minimizes power consumption.

## Test Circuits/Timing Diagrams

MAX4744/MAX4744H/MAX4745/MAX4745H/MAX4746H

Figure 2. Switching Time

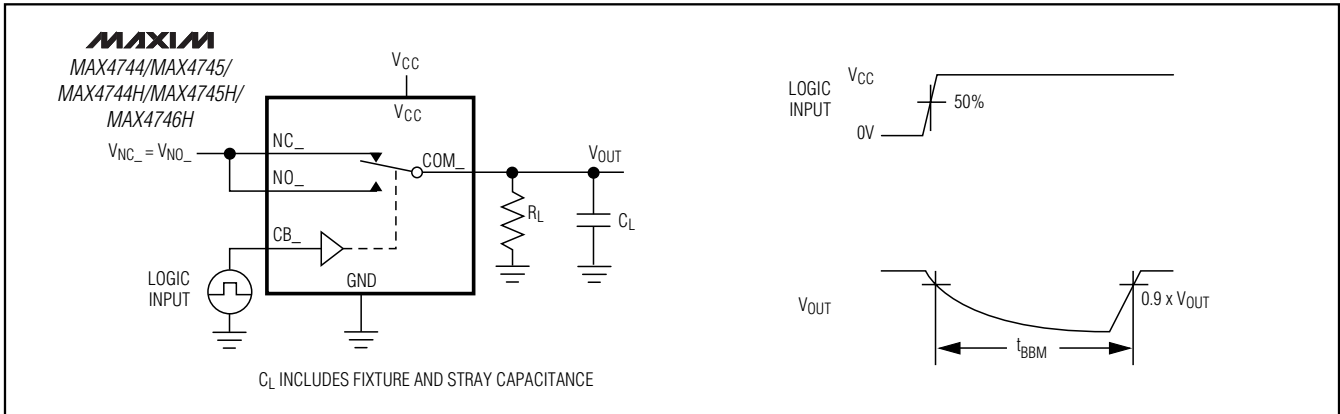

Figure 3. Break-Before-Make Interval

### Analog Signal Levels

These devices pass signals from  $V_{CC}$  to as low as  $V_{CC} - 5.5V$ , including signals below ground with minimal distortion and very little change in on-resistance (see the *Typical Operating Characteristics*). The switches are bidirectional, so the NO\_, NC\_, and COM\_ terminals can be used as either inputs or outputs.

### COM\_ Protection with $V_{CC} = 0V$ (MAX4744H/MAX4745H/MAX4746H)

This feature prevents any damage to the device due to improper power-supply sequencing. The protection applies if a signal is applied on COM\_ when  $V_{CC}$  is less than 0.5V. The switch is not protected if  $V_{CC}$  goes above 0.5V due to parasitic capacitive coupling or any

leakage between COM\_ and  $V_{CC}$ . The signal at COM\_ ranges between  $(V_{CC} - 6.0V)$  to 6.0V under protection conditions.

### Click-and-Pop Suppression

The MAX4744/MAX4744H have a shunt resistor on all their NO and NC terminals to automatically discharge any capacitance when they are not connected to COM. The shunt resistor reduces audible click-and-pop sounds that occur when switching between audio sources. Audible clicks and pops are caused when a step DC voltage is switched into the speaker. The DC step transients can be reduced by automatically discharging the side that is not connected to the COM terminal, reducing any residual DC voltage and reducing clicks and pops.

# Low-Voltage, Dual SPDT, Audio Clickless Switches with Negative Rail Capability

## Test Circuits/Timing Diagrams

Figure 4. Charge Injection

Figure 5. Off-Isolation, On-Loss, and Crosstalk

### Break-Before-Make Switching

All devices feature break-before-make switching, which is configured to break (open) the first set of contacts before engaging (closing) the new contacts. This prevents the momentary connection of the old and new signal paths to the output, reducing click-and-pop sounds.

### Power-Supply Sequencing and Overvoltage Protection

**Caution: Do not exceed the Absolute Maximum Ratings since stresses beyond the listed ratings may cause permanent damage to the device.**

Proper power-supply sequencing is recommended for all CMOS devices. Improper supply sequencing can force the switch into latch-up, causing it to draw excessive supply current. The only way out of latch-up is to recycle the power and reapply properly. Connect all ground pins first, then apply power to VCC, and finally apply signals to NO\_, NC\_, and COM\_. Follow the reverse order upon power-down.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
