

# VSC3312-01

## 8.5 Gbps 12x12 Crosspoint Switch

The VSC3312-01 is a 12-port 8.5 Gbps asynchronous switch with advanced signal equalization designed for high-speed serial backplanes and cable interconnect applications. VSC3312-01 switches allow multicast, loopback, and reconfigurable Input/Output (I/O) capability for great flexibility in allocating and routing signals in a broad range of applications. The VSC3312-01 includes dual time-constant equalization, which significantly reduces jitter associated with driving multigigabit signals across backplanes and cables. A fully asynchronous architecture allows any data rate or protocol on any channel without the need for an external reference clock. This gives the VSC3312-01 wire-like interoperability in virtually any application that uses binary signaling. The VSC3312-01 can also be used as a buffer that simplifies and enhances the design of high-speed signal paths by providing signal equalization at both inputs and outputs to reduce or reverse signal degradation due to transmission line effects.

The VSC3312-01 has a total of 24 ports. Eight are dedicated inputs, eight are dedicated outputs, and the remaining eight may be configured as either inputs or outputs without restriction. This design provides the flexibility of using the device as a standard 12x12 crosspoint, or any ratio from 8x16 to 16x8. This unique feature allows full I/O utilization in any application that has less than a 2:1 ratio between inputs and outputs. In many cases, this translates to a significant reduction in chip count. Featuring programmable input signal equalization and output pre-emphasis, each with multiple time constants, the VSC3312-01 is also ideal for countering signal degradation over a wide variety of transmission media types and lengths.

Typical power consumption for the device is 160 mW per active channel, and unused channels may be deactivated to save the power associated with those ports. The output drivers for the VSC3312-01 also feature a wide supply voltage range (from 1.8 V to 3.3 V) that allows flexibility in matching the output swing to application requirements.

The VSC3312-01 has a LOS detector with programmable thresholds on every input port. The LOS status can be made to appear at either of two status pins for external use. The LOS signal can also be switched to each of the outputs in concert with the high-speed switching core. LOS forwarding can be enabled for each of the outputs, which will cause the outputs to be squelched in response to a LOS detect at the corresponding input, thereby propagating signal envelopes through the switch.

Programming of the VSC3312-01 is through a standard two-wire serial interface. The interface address can be hardwired through static pins or through a proprietary two-pin interface that allows for address selection after power-up. All pin functions such as Config, ResetB, and Status pin states are also accessible through registers to ensure maximum flexibility.

### Applications

- Wideband signal switching and clean-up
- Line driver or receiver
- Backplane signal fanout, driver, or receiver
- Copper cable driver or receiver
- PCB signal enhancement

### Specifications

- 8.5 Gbps non-return-to-zero (NRZ) per-channel data rate
- 2.5 V core, 1.8 V, 2.5 V, and 3.3 V high-speed I/O
- 3.2 W maximum at 3.3 V, or 2.4 W at 2.5 V, or 2 W at 1.8 V

# VSC3312-01

## 8.5 Gbps 12x12 Crosspoint Switch

### Features

- 8.5 Gbps NRZ data bandwidth
- Fully non-blocking and multicasting switch core with per-pin signal inversion capability
- Multiple time-constant programmable input and output equalization
- Wide equalization adjustment range
- Fully asynchronous operation with <1 ns latency
- Reconfigurable I/O capability
- LOS detection and forwarding

### Benefits

- Transparent support for virtually all data rates and protocols
- Allows complete flexibility in routing and distributing signals
- Compensates for multiple impairments in a signal path
- Supports all types of interconnect media: PCB, backplanes, and cable
- No adjustments based on data rate or reference clock required
- Customize the I/O to the application
- OOB forwarding for protocols like SAS and SATA

Microsemi Corporation (Nasdaq: MSCC) offers a comprehensive portfolio of semiconductor and system solutions for communications, defense and security, aerospace, and industrial markets. Products include high-performance and radiation-hardened analog mixed-signal integrated circuits, FPGAs, SoCs, and ASICs; power management products; timing and synchronization devices and precise time solutions; voice processing devices; RF solutions; discrete components; enterprise storage and communications solutions, security technologies, and scalable anti-tamper products; Ethernet solutions; Power-over-Ethernet ICs and midspans; custom design capabilities and services. Microsemi is headquartered in Aliso Viejo, California, and has approximately 4,800 employees worldwide. Learn more at [www.microsemi.com](http://www.microsemi.com).

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
