DESCRIPTION

The *ISSI* IS61WV51232Axx/Bxx and IS64WV51232Bxx are high-speed, 16M-bit static RAMs organized as 512K words by 32 bits. It is fabricated using *ISSI*'s high-performance CMOS technology. This highly reliable process coupled with innovative circuit design techniques, yields high-performance and low power consumption devices.

When $\overline{\text{CE}}$ is HIGH (deselected), the device assumes a standby mode at which the power dissipation can be reduced down with CMOS input levels.

Easy memory expansion is provided by using Chip Enable and Output Enable inputs, $\overline{\text{CE}}$ and $\overline{\text{OE}}$. The active LOW Write Enable ($\overline{\text{WE}}$) controls both writing and reading of the memory.

The device is packaged in the JEDEC standard 90-ball BGA (8mm x 13mm).
