ISL6185

Dual USB Port Power Supply Controller

FN6937
Rev 3.00
March 8, 2012

The ISL6185 USB power controller family provides fully independent overcurrent (OC) fault protection for two or more USB ports.

This product family consists of sixteen individual functional product variants and three package options. It is operation rated for a nominal +2.5V to +5V range and is specified over the full commercial and industrial temperature ranges.

Each ISL6185 type incorporates in a single package two 71mΩ P-channel MOSFET power switches for power control. Each features internal current monitoring, accurate current limiting, and current limited delay to turn-off, for system supply protection along with control and communication I/O.

The ISL6185 family offers product variants with specified continuous output current levels of 0.6A, 1.1A, 1.5A or 1.8A; enable active high or low inputs; and latch off or automatic retry after overcurrent turn-off, making these devices well suited for many low-power applications.

This family of ICs is offered in an industry-standard SOIC pinout and also in the 70% smaller 3x3 DFN packages providing similar or enhanced performance in the smallest possible package.

Features

- 2.5V to 5V Operating Range
- 71mΩ Integrated Power P-channel MOSFET Switches
- Continuous Current Options for 0.6A, 1.1A, 1.5A and 1.8A
- Thermally Insensitive 12ms of Current Limiting Prior to Turn-Off
- Output Discharges with Reverse Current Blocking When Disabled
- Latch-off or Auto Restart Options
- 1µA Off-State Supply Current
- Enable Polarity Options
- Industry-standard Pin for Pin SOIC, and Smaller DFN Packages Available
- UL Recognized, File Number: E333469

Applications

- USB 1, 2, 3 Port Power Management
- Low Power (18W) Electronic Circuit Limiting and Breaker

NOTES:

1. Add "-T*" suffix for tape and reel. Please refer to TB347 for details on reel specifications.
2. These Intersil Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
3. For Moisture Sensitivity Level (MSL), please see device information pages for ISL6185XXC (commercial version) and ISL6185XXI (industrial version). For more information on MSL please see techbrief TB363.

Pin Descriptions

PIN NUMBER		SYMBOL	DESCRIPTION
8 Ld SOIC/DFN	10 Ld DFN		
1	1	GND	IC ground reference.
2	2, 3	VIN	Chip bias, Controlled Voltage Input, Undervoltage Lock Out (UVLO). VIN provides chip bias voltage. At VIN < 1.7V chip functionality is disabled, $\overline{FLT}$ is active and floating, and OUT is held low. Range 0V to 5.5V.
3, 4	4, 5	EN1, $\overline{EN1}$/ EN2, $\overline{EN2}$	Enable/Disable inputs, Active high (EN) and active low ($\overline{EN}$) options enable the power switch. These inputs have internal 1MΩ pull-off resistors. Range 0V to VIN.
5, 8	6, 10	$\overline{FLT2}$ $\overline{FLT1}$	Overcurrent Fault Indicator. $\overline{FLT}$ floats and is disabled until VIN >V_{UVLO}. This output is pulled low after the current limit time-out period has expired. Fault is not signaled due to over-temperature shut down. Range 0V to VIN.
6, 7	7, 9	OUT2, OUT1	Controlled Supply Output. Upon an OC condition, I_{OUT} is current limited. Current limit response time is within 200µs. This output remains in current limit for a nominal 12ms before being turned off either for the latch or auto retry versions. Range 0V to VIN.
-	8	NC	This pin is not electrically connected internally.
PD (DFN only)	PD	EPAD	Thermal Dissipation Exposed PAD Range: Connect to GND.

Absolute Maximum Ratings

Supply Voltage (VIN to GND, Note 7) 6.5V
EN, FAULT. . . . . VIN
OUT. . . . . GND - 0.3V to VIN 0.3V
Output Current . . . . . Short Circuit Protected Current Limit of 2.5A
ESD Rating
  Human Body Model (Per MIL-STD-883 Method 3015.7). 3kV
  Machine Model (Per MIL-STD-883 Method 3015.7) 300V
Latch Up (Tested per JESD-78B; Class 2, Level A) 100mA

Thermal Information

Thermal Resistance (Typical, Note 4)	θ_{JA} (°C/W)	θ_{JC} (°C/W)
8 Lead SOIC Package (Note 4)	120	N/A
8 Lead 3x3 DFN Package (Notes 5, 6)	48	6
10 Lead 3x3 DFN Package (Notes 5, 6)	53	6

Maximum Junction Temperature . . . . . +150°C
Maximum Storage Temperature Range . . . . . -65°C to +150°C
Pb-Free Reflow Profile . . . . . see link below
http://www.intersil.com/pbfree/Pb-FreeReflow.asp

Operating Conditions

Commercial Temperature Range . . . . . 0°C to +70°C
Industrial Temperature Range . . . . . -40°C to +85°C
Supply Voltage Range (Typical). . . . . 2.3V to 5.5V

CAUTION: Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

NOTES:

4. θ_{JA} is measured with the component mounted on a high effective thermal conductivity test board in free air. See Tech Brief TB379 for details.
5. θ_{JA} is measured in free air with the component mounted on a high effective thermal conductivity test board with “direct attach” features. See Tech Brief TB379.
6. For θ_{JC}, the “case temp” location is the center of the exposed metal pad on the package underside.
7. All voltages are relative to GND, unless otherwise specified.

Introduction

The ISL6185 is a dual channel fully independent overcurrent (OC) fault protection IC for the +2.5V to +5V environment. Each ISL6185 incorporates in a single package two 85mΩ P-channel MOSFET power switches for power control. Independent enabling inputs and fault reporting outputs compatible with 2.5V to 5V logic allow for external control and reporting. This device features integrated power switches with current monitoring, accurate current limiting, reverse bias protection and current limited timed delay to turn-off for system reliability. See Figures 13 through 28 for typical operational waveforms including both under-current and over-current situations.

The ISL6185 offers current sense and limiting, with V_{IN} = 5V guaranteed continuous current product variants of 0.6A, 1.1A, 1.5A and 1.8A, making these devices well suited for a myriad of USB and other low power (9W max) port power management applications and configurations.

The ISL6185 also provides thermally insensitive timed OC turn-off and fault notification. This isolates and protects the voltage bus in the event of a peripheral OC event or short circuit event, independent of the adjoining switch's electrical or the ambient thermal condition.

The ISL6185 undervoltage lockout feature prevents turn-on of the outputs unless the correct ENABLE state and $V_{IN} > V_{UVLO}$ are present. During initial turn-on, the ISL6185 prevents fault reporting by blanking the fault signal.

During operation, once an OC condition is detected, the output is current limited for t_{CL} to allow transient OC conditions to pass. If still in current limit after the current limit period has elapsed, the output is turned off, and the fault is reported by pulling the corresponding $\overline{FAULT}$ output low. On the latch-off options, after turn-off, both the output and the $\overline{FAULT}$ signal are latched low until reset by the enable signal being de-asserted or until a POR occurs. At this time, the $\overline{FAULT}$ signal clears, and the switch is ready to be turned back on. On the auto restart options, the ISL6185 attempts to periodically turn on the output, as long as the enable is asserted.

When disabled, the ISL6185 has a low quiescent supply current and an output-to-input reverse current flow blocking capability.

The ISL6185 family is provided with enable polarity options and an industry-standard 8 lead SOIC pinout, along with two versions in the 70% smaller 3x3 DFN. The 8 Ld DFN package offers the same performance as the 8 Ld SOIC, whereas the 10 Ld DFN offers higher current capability in the smallest possible package because of lower package electrical and thermal resistance.

Functional Description

Power On Preset (POR)

The ISL6185 POR feature inhibits device functionality when VIN < V_{UVLO}.

Reverse Polarity Protection

In any event in which the power switch is disabled and $V_{OUT} > V_{IN,}$ there will be no output-to-input current flow, nor will the output voltage appear on the input.

Soft-Start

Upon enable, the switch passes a constant current to the load. The voltage on the VOUT pin ramps up according the equation, I_{LIM}/C_{OUT} (V/s). Resistive or active load slows the V_{OUT} ramp-up toward the top of its curve.

Fault Blanking On Start-Up

During initial turn-on, the ISL6185 prevents nuisance faults from being reported to the system controller by blanking the fault signal until the internal FET is fully enhanced.

Current Trip and Limiting Levels

The ISL6185 provides integrated current sensing in the MOSFET that allows for rapid control of OC events. Once an OC condition is detected, the ISL6185 goes into its current limiting (CL) control mode. The ISL6185 is variant specified to allow a continuous current (I_{CONT}) operation of 0.6A, 1.1A, 1.5A or 1.8A. As the current increases past its continuous current rating, it will reach a level that causes the device to enter its current limit mode; that is, the current trip level. The current trip level is in all cases adequately above the I_{CONT} rating so as not to cause unintended false faults. The current limit is specified at $V_{OUT} = V_{IN}$ - 1V to test a known representative condition and is featured at a nominal value slightly higher than the continuous current rating. The speed of this current limiting control is inversely related to the magnitude of the OC fault. Thus, a hard overcurrent is more quickly pulled to its limiting value than a marginal OC condition.

Over-Temperature Shutdown

Although the ISL6185 has an over-temperature shutdown and lockout feature, because of the 12ms timed shutdown, the thermal shutdown is likely to be invoked only in extremely high ambient temperatures.

The over-temperature protection invokes and disables the switch turn-on operation once the die temperature is ~+140°C. It turns off an already on switch at ~+150°C and releases the part to operation once the die temperature falls to ~+120°C.

Turn-off Time Delay

During operation, once an OC condition is detected, the output is current limited for ~12ms to allow transient OC conditions to pass. If still in current limit and after the current limit period has elapsed, the output is turned off, and the fault is reported by pulling the corresponding $\overline{\text{FAULT}}$ low. The internal 12ms timer starts upon current limiting and is independent of ambient or IC thermal conditions, thus providing more consistent operation over the entire temperature range.

Latch-off Restart/Auto-Restart Start

After turn-off, with the latch-off options, both the output and the $\overline{\text{FAULT}}$ signal are latched low until they are reset by the enable signal being de-asserted. At this time, the $\overline{\text{FAULT}}$ signal clears, and the IC is ready for enable to assert. On the auto restart options, the ISL6185 attempts to periodically turn-on the output at approximately 1s intervals, as long as the enable is asserted. If the OC condition remains indefinitely, the fault indication and the restart attempts also continue until the thermal protection feature is invoked, thus increasing the restart period.

Active Output Pull-down

Another ISL6185 feature is the 10kΩ active pull-down on the outputs to <60mV above GND when the device is disabled, thus ensuring discharge of the load.

Application Information

Using the ISL6185xEVAL1Z Platform General and Biasing Information

There are three evaluation platforms for the ISL6185 family. There is one platform for each package style, each with a different continuous output current level and a mix of enable polarity and output retry or latch options. See page 4, at the end of the "Ordering Information" table, for information on the standard available evaluation board options. Figure 32A shows the common schematic for all three evaluation boards. See "Pin Configurations" on page 5 for details and differences.

The evaluation platform is biased and monitored through numerous labeled test points. See Table 1 for test point assignments and descriptions.

TABLE 1. ISL61851EVAL1Z TEST POINT ASSIGNMENTS

TP NAME	DESCRIPTION
GND	Eval Board and IC Gnd
V+	Eval Board and IC Bias
EN1	Enable Switch 1
EN2	Enable Switch 2
FLT2	Switch 2 Fault
OUT2	Switch Out 2
OUT1	Switch Out 1
FLT1	Switch 1 Fault

Upon proper bias of the evaluation platform and correct enabling of the IC, the ISL6185 will have a nominal $V_{IN}/10\Omega$ load current that is lower than the continuous current rating passing through each enabled switch. See Figures 13 and 14 for typical ISL6185 turn-on and turn-off waveforms.

External current loading in excess of the trip current level for the particular part being evaluated will result in the ISL6185 entering the current limiting mode. Figure 16 illustrates the current limiting mode for the ISL6185 product variants with 0.6A of continuous load current rating. The scope shot shows current limiting for ~12ms before it is turned off and the fault signal is asserted.

Application Considerations

The application considerations for the ISL6185 family are widely accepted best industry practices. Good decoupling practices on the VIN pin must be followed: placement close to the IC, with at least 2.2µF recommended. It is recommended to reduce the input and output inductance to the ISL6185 with good PCB layout practices.

When designing with the 1.5A and 1.8A versions in an implementation in which the output may be unloaded (open) while the ISL6185 is turned on, a minimum of 4.7µF of capacitive output load is recommended to prevent high dv/dt from unnecessarily activating the surge/ESD control circuit.

The ISL6185 provides several continuous current rated devices specified at V_{IN} = 5V; these are 0.6A, 1.1A, 1.5A and 1.8A options that are capable over the entire temperature extreme. At V_{IN} = 3.3V, the current capability is degraded, and the ISL6185 is specified at 0.6A, 1.1A, 1.3A and 1.5A, respectively. At V_{IN} = 2.5V, there are no minimum specifications, but a typical value is provided for +25°C operation (see "Electrical Specifications" on page 6). This degraded capability is due to the higher $r_{DS(ON)}$ of the FET switch at the lower bias voltage.

The enhanced thermal characteristics and increased number of bond wires allow the 10 Ld DFN to have a higher current capability than either the 8 Ld SOIC or the DFN.

TABLE 2. ISL6185XEVAL1Z BOARD COMPONENT LISTING

COMPONENT DESIGNATOR	COMPONENT FUNCTION	COMPONENT DESCRIPTION
U1	ISL6185	Intersil, ISL6185
R3 - R4	Output Load Resistors	10Ω, 5%, 3W
R1 - R2	FLT Output Pull-up Resistor	10kΩ, 0805
C1	Decoupling Capacitor	2.2µF, 0805
C2 - C3	Load Capacitor	10µF 16V Electrolytic, Radial Lead

Revision History

The revision history provided is for informational purposes only and is believed to be accurate, but not warranted. Please go to web to make sure you have the latest Rev.

DATE	REVISION	CHANGE
March 1, 2012	FN6937.3	In “Features” on page 1 changed from: UL Recognized, File Number: E333469 (Applies to DFN Packages, SOIC Package to be Qualified Shortly) to: UL Recognized, File Number : E333469 In “Absolute Maximum Ratings” on page 6: Changed from: Output Current . . . . . Short Circuit Protected to: Output Current . . . . . .Short Circuit Protected Current Limit of 2.5A Updated “Package Outline Drawing” on page 20. Changed Note 1 "1982" to "1994".
December 2, 2011	FN6937.2	Page 1: Added "UL Recognized, File Number: E333469 (Applies to DFN packages, SOIC pkg to be qualified shortly)" to "Features" Page 8: Added Isc_5.5, Short Circuit Current with max of 2.5A to “Electrical Specifications” Page 19: Updated package outline drawing to most updated revision. Removed package outline and included center to center distance between lands on recommended land pattern. Removed Note 4 "Dimension b applies to the metallized terminal and is measured between 0.18mm and 0.30mm from the terminal tip." since it is not applicable to this package. Renumbered notes accordingly.
June 14, 2011	FN6937.1	Page 2: “Ordering Information”: added part numbers of parts installed on evaluation boards to Description column. Page 7: “Electrical Specifications” table: - For “Maximum Continuous Current, VIN = 2.5V,” changed “ISL61851C,D,G,H (SOIC)” to “ISL61851C,D,G,H,I,J,K,L (SOIC)” - For “Trip Current, V_{IN} = 5V”, changed “ISL61853I,J,K,L” to “ISL6185xI,J,K,L”. For “ISL61853M.N,O,P” changed MAX from “2.15” to “2.45”. - For “Trip Current, VIN = 3.3V” and “Trip Current, VIN = 2.5V” changed “ISL61853I,J,K,L“ to “ISL6185xI,J,K,L“. - For “Current Limit, VIN = 5V”, “Current Limit, VIN = 3.3V”, and “Current Limit, VIN = 2.5V”, changed “ISL61853I,J,K,L, VIN - VOUT = 1V” to “ISL6185xI,J,K,L, VIN - VOUT = 1V” - For “Short Circuit Current, VIN = 5V”, “Short Circuit Current, VIN = 3.3V” and “Short Circuit Current, VIN = 2.5V” changed “ISL61853I,J,K,L, VOUT = 0V” to “ISL6185xI,J,K,L, VOUT = 0V” Page 8: “Electrical Specifications” table: For the I/O Parameters Venr_5, Hys_Venr_5, Venr_3, Hys_Venr_3, Venr_2, and Hys_Venr_2: changed "ENABLE Rising Threshold" and "ENABLE Rising Threshold Hysteresis" to "EN / $\overline{EN}$ Rising Threshold" and "EN / $\overline{EN}$ Rising Threshold Hysteresis," for clarity. Page 8: Electrical Specifications table: Removed UV_{HYS}, POR Hysteresis specification. Page 20: Replaced Rev. 1 of M8.15 package outline drawing, dated 6/05, with Rev 2 (latest version), dated 11/10. Applied current Intersil datasheet template to document.
October 22, 2010	FN6937.0	Initial release.

Products

Intersil Corporation is a leader in the design and manufacture of high-performance analog semiconductors. The Company's products address some of the industry's fastest growing markets, such as, flat panel displays, cell phones, handheld products, and notebooks. Intersil's product families address power management and analog signal processing functions. Go to www.intersil.com/products for a complete list of Intersil product families.

For a complete listing of Applications, Related Documentation and Related Parts, please see the respective device information pages on intersil.com for ISL6185XXC (commercial version) and ISL6185XXI (industrial version).

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- *Конкурентоспособные цены и скидки постоянным клиентам.*
- *Специальные условия для постоянных клиентов.*
- *Подбор аналогов.*
- *Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.*

- *Приемлемые сроки поставки, возможна ускоренная поставка.*
- *Доставку товара в любую точку России и стран СНГ.*
- *Комплексную поставку.*
- *Работу по проектам и поставку образцов.*
- *Формирование склада под заказчика.*

- *Сертификаты соответствия на поставляемую продукцию (по желанию клиента).*
- *Тестирование поставляемой продукции.*
- *Поставку компонентов, требующих военную и космическую приемку.*
- *Входной контроль качества.*
- *Наличие сертификата ISO.*

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- *Регистрацию проекта у производителя компонентов.*
- *Техническую поддержку проекта.*
- *Защиту от снятия компонента с производства.*
- *Оценку стоимости проекта по компонентам.*
- *Изготовление тестовой платы монтаж и пусконаладочные работы.*
