

128Mb: x4, x8, x16
SDRAM 3.3V

SYNCHRONOUS DRAM

Features:

- Intel PC-100 (3-3-3) or PC133 (3-3-3) compatible
- Fully synchronous; all signals registered on positive edge of system clock
- Internal pipelined operation; column address can be changed every clock cycle
- Internal banks for hiding row access precharge time
- Programmable burst lengths: 1, 2, or 4 using Interleaved Burst Addressing
- Auto Precharge and Auto Refresh modes
- 64ms, 4,096-cycle refresh quad-row refresh, (15.6μs/row)
- Self Refresh mode¹
- LVTTTL-compatible inputs and outputs
- Single +3.3V ±0.3V power supply
- The x16 devices are optimized for both single and dual rank DIMM applications. The x8 devices are optimized for single rank DIMM applications.

Options:

Designation:

Family:

SpecTek Memory

SAA

Configuration:

32 Meg x 4 (8 Meg x 4 x 4 banks)	32M4
16 Meg x 8 (4 Meg x 8 x 4 banks)	16M8
8 Meg x 16 (2 Meg x 16 x 4 banks)	8M16

Design ID

SDRAM 128 Megabit Design Yx5x
(Call SpecTek Sales for details on availability of "x" placeholders)

Voltage and Refresh:

3.3V, Auto Refresh, 4K refresh	L4
3.3V, Self or Auto Refresh ¹ , 4K refresh	M4

Package Types:

54-pin plastic TSOP (400 mil)	TK
60-ball FBGA (8mm x 16mm)	FB ²
60-ball FBGA (11mm x 13mm)	FC ²

Timing Types:

PC100 (3-3-3)	-8A
PC133 (3-3-3)	-75A

Part number example: SAA16M8Y95AL4TK-75A
(For part numbers prior to December 2004, refer to [page 9](#) for decoding.)

General Description:

The 128Mb SDRAM is a high-speed CMOS, dynamic random-access memory containing 134,217,728 bits. Each is internally configured as a quad-bank DRAM. Read and write accesses to the SDRAM are burst oriented; accesses start at a selected location and continue for a programmed number of locations in a programmed sequence. Accesses begin with the registration of an ACTIVE command, which is then followed by a READ or WRITE command. The address bits registered coincident with the ACTIVE command are used to select the bank and row to be accessed (BA0, BA1 select the bank; A0-A11 select the row). The address bits registered

128Mb: x4, x8, x16 SDRAM 3.3V

coincident with the READ or WRITE commands are used to select the starting column location for the burst access.

The SDRAM provides for programmable READ or WRITE burst lengths of 1, 2, or 4 locations with burst terminate option using the Burst Interleaved Addressing mode only. An AUTO PRECHARGE function may be enabled to provide a self-timed row precharge that is initiated at the end of the burst sequence.

The 128Mb SDRAM uses an internal pipelined architecture to achieve high-speed operation. This architecture is compatible with the 2n rule of prefetch architectures, but it also allows the column address to be changed on every clock cycle to achieve a high-speed, fully random access. Precharging one bank while accessing one of the other three banks will hide the precharge cycles and provide seamless high-speed, random-access operation.

The 128Mb SDRAM is designed to operate in 3.3V, low-power memory systems. An auto refresh mode is provided, along with a power-saving power-down mode. All inputs and outputs are LVTTTL-compatible. SDRAMs offer substantial advances in DRAM operating performance, including the abilities to synchronously burst data at a high data rate with automatic column-address generation, to interleave between internal banks in order to hide precharge time, and to randomly change column addresses on each clock cycle during a burst access.

The x8 devices are optimized for single bank DIMM applications. The x16 devices are available for both single and dual bank DIMM applications.

Disclaimer:

Except as specifically provided in this document, SpecTek makes no warranties, expressed or implied, including, but not limited to, any implied warranties of merchantability or fitness for a particular purpose.

Any claim against SpecTek must be made within one year from the date of shipment from SpecTek, and SpecTek has no liability thereafter. Any liability is limited to replacement of the defective items or return of amounts paid for defective items (at buyer's election). In no event will SpecTek be responsible for special, indirect, consequential or incidental damages, even if SpecTek has been advised for the possibility of such damages. SpecTek's liability from any cause pursuant to this specification shall be limited to general monetary damages in an amount not to exceed the total purchase price of the products covered by this specification, regardless of the form in which legal or equitable action may be brought against SpecTek.

ABSOLUTE MAXIMUM RATINGS:

Voltage on Vdd Supply relative to Vss	-1 to +4.6V
Operating Temperature T _A (Ambient)	25° to +70 °C
Storage Temperature	-55 to +150 °C
Power Dissipation	1 W
Short Circuit Output Current	50 mA

Stresses beyond these may cause permanent damage to the device. This is a stress rating only and functional operation of the device at or beyond these conditions is not implied. Exposure to these conditions for extended periods may affect reliability.

CAPACITANCE:

Parameter	Symbol	Min	Max	Units
Input Capacitance: A0 - A11, BA0, BA1	C _{in}	1	5	pF
Input Capacitance: RAS#, CAS#, WE#, DQM, CLK, CKE, CS#	C _{in}	1	5	pF
Input/Output Capacitance: DQs	C _{io}	1	6	pF

DC ELECTRICAL CHARACTERISTICS AND RECOMMENDED OPERATING CONDITIONS:

Parameter	Symbol	Min	Max	Units
Supply Voltage	V _{dd} /V _{ddq}	3.0	3.6	V
Input High (Logic 1) Voltage, All inputs	V _{ih}	2.2	V _{dd} + 3	V
Input Low (Logic 0) Voltage, All inputs	V _{il}	-0.3	0.8	V
Input Leakage Current Any input = 0V ≤ VIN ≤ Vdd All other pins not under test = 0V	I _i	-10	10	μA
Output Leakage Current DQs are disabled; 0V ≤ VOUT ≤ VddQ	I _{oq}	-10	10	μA
Output High Voltage (I _{OUT} = -4 mA)	V _{oh}	2.4		V
Output Low Voltage (I _{OUT} = 4 mA)	V _{ol}		0.4	V

ICC OPERATING CONDITIONS AND MAXIMUM LIMITS: Vdd = 3.3V ± 10%V, Temp. = 25° to 70 °C

Supply Current	Symbol	-75A	-8A	Units	Notes
OPERATING CURRENT: ACTIVE mode, burst = 1, READ or WRITE, tRC ≥ tRC (MIN), one bank active, CL=3	Icc1	165	140	mA	1, 2, 3, 4
STANDBY CURRENT: POWER-DOWN mode, CKE = LOW, no accesses in progress	Standard parts Idd2	9	9	mA	32
	Self refresh parts Idd2	3	3	mA	32
STANDBY CURRENT: CS# = HIGH, CKE = HIGH, all banks idle	Icc3	75	60	mA	1, 2, 3, 4
STANDBY CURRENT: CS# = HIGH, CKE = HIGH, all banks active after tRCD met, no accesses in progress.	Icc4	75	50	mA	1, 2, 3, 4
OPERATING CURRENT: BURST mode after tRCD met, continuous burst, READ, WRITE, all banks active, CL=3	Icc5	165	145	mA	1, 2, 3, 4
AUTO REFRESH CURRENT tRC ≥ tRC (MIN) CL = 3	Icc6	265	245	mA	1, 2, 3, 4
AUTO REFRESH CURRENT tRC=15.6us CL = 3	Icc7	50	50	mA	1, 2, 3, 4
SELF REFRESH CURRENT (Self refresh parts only, part M)	Idd8	3	3	mA	

Notes

1. All voltages referenced to Vss.
2. An initial pause of 100 μs is required after power-up, followed by two AUTO REFRESH commands, before proper device operation is ensure. (Vdd and VddQ must be powered-up simultaneously Vss and VssQ must be at the same potential.) The two AUTO REFRESH command wake-ups should be repeated any time the 'REF refresh requirement is exceeded.
3. Icc specifications are tested after the device is properly initialized. tCK= 10ns for -8 and tCK=7.5ns for -75A.

NOTES:

1. Clocks required specified by JEDEC functionality and not dependent on any timing parameter.
2. Timing actually specified by tCKS, clock(s) specified as a reference only at a minimum cycle rate.
3. Timing actually specified by tWR plus tRP clock(s) specified as a reference only at a minimum cycle rate.
4. tHZ defines the time at which the output achieves the open circuit condition; it is not a reference to Voh or Vol. The last valid data element will meet tOH before going high-Z.
5. Based on tCK = 10ns for -8 and tCK = 7.5ns for -75a

54-PIN PLASTIC TSOP (400 mil)
(Package TK)

- NOTE:**
1. All dimensions in millimeters MAX/MIN or typical where noted.
 2. Package width and length do not include mold protrusion; allowable mold protrusion is 0.25mm per side.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
