

## LTC4071EDDB: Li-Ion / Polymer Shunt Battery Charger System with Low Battery Disconnect

### DESCRIPTION

Demonstration Circuit DC1702A is a Li-Ion/Polymer Shunt Battery Charger system with Low Battery Disconnect featuring the LTC<sup>®</sup>4071EDDB.

### PERFORMANCE SUMMARY Specifications are at $T_R = 25^\circ\text{C}$

SYMBOL	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
V <sub>BUS</sub>	Input voltage	$R_{LIMIT} = 169\Omega$	10	12	16	V
V(BAT)	Battery Float Voltage	'VFLOAT' jumper on 4.1V, Constant Voltage Mode. $T_{NTC} = 25^\circ\text{C}$	4.059		4.141	V
I(BAT)	Battery Charge Current	Constant Current Mode, $V_{in} = 12\text{V}$ , $V_{CC} = 3.8\text{V}$		49.7		mA

### QUICK START PROCEDURE

Refer to Figure 1 for the proper measurement equipment setup and jumper settings and follow the procedure below.

**NOTE.** When measuring the input or output voltage ripple, care must be taken to avoid a long ground lead on the oscilloscope probe. Measure the input or output voltage ripple by touching the probe tip directly across the VIN or V<sub>CC</sub> and GND terminals. See Figure 2 for proper scope probe technique.

- Set PS1 = 12V, PS2 = 3.6V, "VFLOAT" (JP2) to 4.1V. Observe I(VIN) (AM1) and I(BAT) (AM2). The shunt voltage of the LTC4071 is set to 4.1V, and the battery voltage is set to 3.6V. The LTC4071 is only shunting its quiescent current,  $\approx 500\text{nA}$ , so all of the current flowing through R1 is going to charge the battery.  $(12 - 3.6)/499 = 16.8\text{mA}$ .
- Increase PS2 until HBO LED is lit. Observe V(BAT) (VM2). The HBO LED will activate when the battery is nearly fully charged or at  $\approx V_{float} - 50\text{mV}$ .
- Continue to increase PS2, and observe AM1 and AM2. At the programmed float voltage for the LTC4071, AM2 will go to 0A. The LTC4071 is now shunting all of the current flowing through R1, to ground. The float voltage on the LTC4071 has a tolerance of 1%.
- Disconnect PS1 and decrease PS2 until V<sub>CC</sub> (VM3) goes to less than 100mV. Observe V(BAT) (VM2). This is the low battery voltage disconnect. When the battery voltage reaches the low battery disconnect threshold (LBO) (2.7V or 3.2V), an internal switch disconnects BAT from V<sub>CC</sub>. The BAT pin current when disconnected is less than 0.1nA. However the PCB and other components may increase the total battery leakage to 2~10nA. Measuring this leakage current requires great care.
- Increase PS2 by 0.3V. Reconnect PS1 and set to the same voltage as PS2. Slowly increase PS1

until  $V_{cc}$  snaps down to  $\approx V(BAT)$ . This is the Low Battery Reconnect. Applying power to  $V_{cc}$  charges the battery via the body diode of the internal  $V_{cc}$  to BAT MOSFET switch. When the battery has recharged approximately 0.3V, and enough voltage is applied to  $V_{cc}$ , the switch will reconnect. The reconnect voltage (at  $V_{cc}$ ) is approximately  $V(LBO) + 0.3V + 0.6V$ . So with LBO set to 3.2V, reconnect will occur at  $V_{cc} \approx 4.1V$ . And because  $V_{cc}$  is connected through R1 to PS1, reconnection causes  $V_{cc}$  to snap down to the  $V(BAT)$ .

Note: All connections from equipment should be Kelvin connected directly to the board pins which they are connected on this diagram and any input or output leads should be twisted pair.

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкуренспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
