Application Circuit

Vg and Vd can be biased from either side, and the non-biased side Vg can be left open.
Bypass caps are required on the Vd pins that are not DC biased (pins 10, 11, shown above).
(Vg are either pins 7 and 8 or pins 23 and 24, Vd are either pins 10 and 11 or pins 20 and 21)

Bias-up Procedure	Bias-down Procedure
Vg set to -1.5 V	Turn off RF supply
Vd set to +6 V	Reduce Vg to -1.5V. Ensure Id ~ 0 mA
Adjust Vg more positive until quiescent Id is 650mA. This will be ~ Vg = -0.55 V	Turn Vd to 0 V
Apply RF signal to RF Input	Turn Vg to 0 V

The TGA2527-SM will be marked with the “2527” designator and a lot code marked below the part designator. The “YY” represents the last two digits of the year the part was manufactured, the “WW” is the work week, and the “XXXX” is an auto-generated number.

Applications Information

PC Board Layout

Top RF layer is 0.008" thick Rogers RO4003, $\epsilon_r = 3.38$. Metal layers are 1-oz copper. Microstrip 50 Ω line detail: width = 0.0175".

The pad pattern shown has been developed and tested for optimized assembly at TriQuint Semiconductor. The PCB land pattern has been developed to accommodate lead and package tolerances. Since surface mount processes vary from company to company, careful process development is recommended.
