FEATURES/BENEFITS

- Short-Circuit Protected: Prevents damage to system components, assemblies and system wiring
- Optical Isolation: Isolates control circuits from load transients
Eliminates ground loops and signal ground noise
- Low Off-State Leakage: For high off-state impedance
- Switches High Currents: To 1.5 Adc
- High Noise Immunity: Control signals isolated from switching noise
- High Dielectric Strength: For safety and for protection of control and signal level circuits

DESCRIPTION

The SR75-1 solid-state relay utilizes a power FET switch that is protected against short-circuit and overload currents. The short-circuit protection feature not only provides protection should a short or overload occur while the relay is on, but will also provide protection should the relay be switched into a short. In either case, the relay will sense the short-circuit condition and then block it indefinitely until the short is removed and the unit is reset by cycling the input control. Using the SR75-1 to switch power sources and loads can prevent fires, damage to system assemblies and system wiring. The power FET output offers low "ON" resistance and can switch loads in either the high or the low side of the power line. The SR75-1 is packaged in a 16-pin DIP package with either surface-mount or through-hole mounting available.

NOTES:

1. The input voltage is 5.0 Vdc for all tests unless otherwise specified.
2. For input voltage greater than 6.0 Vdc a series resistor must be used to limit the power dissipation on the input of the relay. The resistor value should be selected using the following equation:
 $R = (V_{BIAS} - 6 \text{ volts})/11\text{mA}$
3. The input transitions are to be less than 1.0 msec duration.
4. Inductive loads must be diode suppressed.
5. Reversing the output polarity when the relay is in overload or is sustaining a short circuit may cause permanent damage.
6. Loads may be switched in either the high side or the low side of the power source.
7. Continuous load current rating is determined with relay mounted on a printed circuit card.
8. Tested at 25°C only.
9. Qualification and/or random sample test only.
