

Low Cost 3.3 V Spread Aware Zero Delay Buffer

Features

- 10 MHz to 100 MHz and 133 MHz operating range, compatible with CPU and PCI bus frequencies
- Zero input-output propagation delay
- Multiple low skew outputs
 - Output-output skew less than 250 ps
 - Device-device skew less than 700 ps
 - One input drives five outputs (CY23S05)
 - One input drives nine outputs, grouped as 4 + 4 + 1 (CY23S09)
- Less than 200 ps Cycle-to-cycle jitter
- Test mode to bypass PLL (CY23S09 only, see [Select Input Decoding for CY23S09](#) on page 4)
- Available in space saving 16-pin, 150-mil SOIC, 4.4 mm TSSOP (CY23S09) or 8-pin, 150-mil SOIC package (CY23S05)
- 3.3 V operation, advanced 0.65μ CMOS technology
- Spread Aware

Functional Description

The CY23S09 is a low cost 3.3 V zero delay buffer designed to distribute high speed clocks and is available in a 16-pin SOIC package. The CY23S05 is an 8-pin version of the CY23S09. It accepts one reference input, and drives out five low skew clocks. The -1H versions of each device operate at up to 100 and 133 MHz frequencies and have higher drive than the -1 devices.

All parts have on-chip PLLs that lock to an input clock on the REF pin. The PLL feedback is on-chip and is obtained from the CLKOUT pad.

The CY23S09 has two banks of four outputs each, which can be controlled by the select inputs as shown in the Select Input Decoding table on [Select Input Decoding for CY23S09](#) on page 4. If all output clocks are not required, Bank B can be three-stated. The select inputs also allow the input clock to be directly applied to the outputs for chip and system testing purposes.

The CY23S09 and CY23S05 PLLs enter a power down mode when there are no rising edges on the REF input. In this state, the outputs are three-stated and the PLL is turned off, resulting in less than 12.0 μA of current draw (for commercial temperature devices) and 25.0 μA (for industrial temperature devices). The CY23S09 PLL shuts down in one additional case, as shown in the [Select Input Decoding for CY23S09](#) on page 4.

Multiple CY23S09 and CY23S05 devices can accept the same input clock and distribute it. In this case, the skew between the outputs of two devices is guaranteed to be less than 700 ps.

All outputs have less than 200 ps of cycle-to-cycle jitter. The input to output propagation delay on both devices is guaranteed to be less than 350 ps; the output to output skew is guaranteed to be less than 250 ps.

The CY23S05 and CY23S09 is available in two different configurations, as shown in the [Ordering Information](#) on page 8. The CY23S05-1 and CY23S09-1 is the base part. The CY23S05-1H and CY23S09-1H is the high drive version of the -1, and its rise and fall times are much faster than -1.

Functional Overview

Zero Delay and Skew Control

All outputs must be uniformly loaded to achieve Zero Delay between the input and output. Because the CLKOUT pin is the internal feedback to the PLL, its relative loading can adjust the input-output delay. This is shown in the above graph.

For applications requiring zero input-output delay, all outputs, including CLKOUT, must be equally loaded. Even if CLKOUT is not used, it must have a capacitive load equal to that on other outputs, to obtain zero input-output delay. If input to output delay adjustments are required, use the above graph to calculate loading differences between the CLKOUT pin and other outputs.

For zero output-output skew, be sure to load all outputs equally. For further information refer to the application note titled [AN1234 - Understanding Cypress's Zero Delay Buffers](#).

Spread Aware

Many systems being designed now use a technology called Spread Spectrum Frequency Timing Generation. Cypress is one of the pioneers of SSFTG development and designed this product so as not to filter off the Spread Spectrum feature of the Reference input, assuming it exists. When a zero delay buffer is not designed to pass the SS feature through, the result is a significant amount of tracking skew, which may cause problems in systems requiring synchronization.

For more details on Spread Spectrum timing technology, please see the Cypress Whitepaper [EMI and Spread Spectrum Technology](#).

Figure 3. REF. Input to CLKA/CLKB Delay vs. Loading Difference between CLKOUT and CLKA/CLKB Pins

Note

- This output is driven and has an internal feedback for the PLL. The load on this output can be adjusted to change the skew between the reference and output.

Maximum Ratings

Supply voltage to ground potential	-0.5 V to +7.0 V	Maximum soldering temperature (10 seconds)	260 °C
DC input voltage (Except REF)	-0.5 V to $V_{DD} + 0.5 V$	Junction temperature.....	150 °C
DC input voltage REF	-0.5 V to 7 V	Static discharge voltage	
Storage temperature	-65 °C to +150 °C	(per MIL-STD-883, Method 3015)	> 2,000 V

Operating Conditions for CY23S05SXX-XX and CY23S09SXX-XX (Industrial, Commercial Devices)^[5]

Parameter	Description	Min	Max	Unit
V_{DD}	Supply voltage	3.0	3.6	V
T_A	Operating temperature - Ambient (Commercial)	0	70	°C
	Operating temperature - Ambient (Industrial)	-40	85	°C
C_L	Load capacitance, below 100 MHz		30	pF
C_L	Load capacitance, from 100 MHz to 133 MHz		10	pF
C_{IN}	Input capacitance		7	pF

Electrical Characteristics for CY23S05SXX-XX and CY23S09SXX-XX (Industrial, Commercial Devices)

Parameter	Description	Test Conditions	Min	Max	Unit
V_{IL}	Input LOW voltage ^[6]			0.8	V
V_{IH}	Input HIGH voltage ^[6]		2.0		V
I_{IL}	Input LOW current	$V_{IN} = 0 V$		50.0	μA
I_{IH}	Input HIGH current	$V_{IN} = V_{DD}$		100.0	μA
V_{OL}	Output LOW voltage ^[7]	$I_{OL} = 8 mA (-1)$ $I_{OH} = 12 mA (-1H)$		0.4	V
V_{OH}	Output HIGH voltage ^[7]	$I_{OH} = -8 mA (-1)$ $I_{OL} = -12 mA (-1H)$	2.4		V
I_{DD} (PD mode)	Power-down supply current	REF = 0 MHz		12.0	μA
I_{DD}	Supply current	Unloaded outputs at 66.67 MHz, SEL inputs at V_{DD}		32.0	mA

Switching Characteristics for CY23S05SXC-1 and CY23S09SXC-1 Commercial Temperature Devices^[8]

Parameter	Description	Test Conditions	Min	Typ	Max	Unit
t_1	Output frequency	30 pF load	10		100	MHz
		10 pF load	10		133.33	MHz
	Duty cycle ^[7] = $t_2 \div t_1$	Measured at 1.4 V, $F_{out} = 66.67 MHz$	40.0	50.0	60.0	%
t_3	Rise time ^[7]	Measured between 0.8 V and 2.0 V			2.50	ns
t_4	Fall time ^[7]	Measured between 0.8 V and 2.0 V			2.50	ns
t_5	Output-to-output skew ^[7]	All outputs equally loaded			250	ps
t_6	Delay, REF Rising Edge to CLKOUT Rising Edge ^[7]	Measured at $V_{DD}/2$		0	± 350	ps
t_7	Device-to-device skew ^[7]	Measured at $V_{DD}/2$ on the CLKOUT pins		0	700	ps
t_J	Cycle-to-cycle jitter ^[7]	Measured at 66.67 MHz, loaded outputs			200	ps
t_{LOCK}	PLL lock time ^[7]	Stable power supply, valid clock presented on REF pin			1.0	ms

Notes

5. Multiple Supplies: The voltage on any input or I/O pin cannot exceed the power pin during power up. Power supply sequencing is NOT required.
6. REF input has a threshold voltage of $V_{DD}/2$.
7. Parameter is guaranteed by design and characterization. Not 100% tested in production.
8. All parameters specified with loaded outputs.

Switching Characteristics for CY23S05SXI-1H Industrial Temperature Devices^[8]

Parameter	Description	Test Conditions	Min	Typ	Max	Unit
t1	Output frequency	30 pF load 10 pF load	10 10		100 133.33	MHz MHz

Компания «Life Electronics» занимается поставками электронных компонентов импортного и отечественного производства от производителей и со складов крупных дистрибьюторов Европы, Америки и Азии.

С конца 2013 года компания активно расширяет линейку поставок компонентов по направлению коаксиальный кабель, кварцевые генераторы и конденсаторы (керамические, пленочные, электролитические), за счёт заключения дистрибьюторских договоров

Мы предлагаем:

- Конкурентоспособные цены и скидки постоянным клиентам.
- Специальные условия для постоянных клиентов.
- Подбор аналогов.
- Поставку компонентов в любых объемах, удовлетворяющих вашим потребностям.
- Приемлемые сроки поставки, возможна ускоренная поставка.
- Доставку товара в любую точку России и стран СНГ.
- Комплексную поставку.
- Работу по проектам и поставку образцов.
- Формирование склада под заказчика.
- Сертификаты соответствия на поставляемую продукцию (по желанию клиента).
- Тестирование поставляемой продукции.
- Поставку компонентов, требующих военную и космическую приемку.
- Входной контроль качества.
- Наличие сертификата ISO.

В составе нашей компании организован Конструкторский отдел, призванный помогать разработчикам, и инженерам.

Конструкторский отдел помогает осуществить:

- Регистрацию проекта у производителя компонентов.
- Техническую поддержку проекта.
- Защиту от снятия компонента с производства.
- Оценку стоимости проекта по компонентам.
- Изготовление тестовой платы монтаж и пусконаладочные работы.
