Precautions

To ensure safe sensor operation, please follow these precautions.

■ Wiring

Power Supply Voltage

Make sure that the power supply to the Sensor is within the rated voltage range.

Load Short-Circuiting

Do not short-circuit the load, or the Sensor may be damaged.

Polarity

Correct polarity wiring is required to prevent damage to the sensor.

Connection without Load

Do not connect the power supply to the Sensor when no load is connected, or the internal elements may explode or burn.

■ Operating Environment

Do not use the Sensor in locations with explosive or flammable gas.

■ Settings

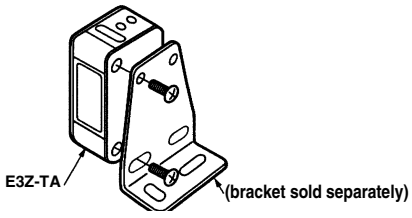
Power Reset Time

When the E3Z-TA is turned ON, there is a 100 ms delay time before operation. If the load and the Sensor are connected to independent power supplies, be sure to turn ON the sensor *before* turning ON the load.

■ Connections

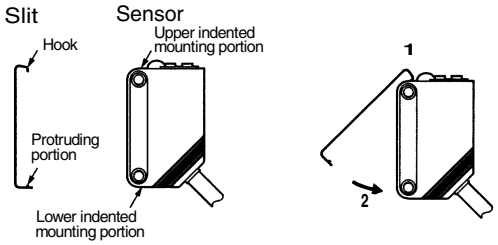
M8 Metal Connector

- Turn OFF the power before disconnecting the sensor.
- Remove the connector cover before connecting or disconnecting the metal connector.
- Secure the connector cover by hand. Do not use pliers, or the connector may be damaged.
- The proper tightening torque range is between 0.3 and 0.4 N·m.

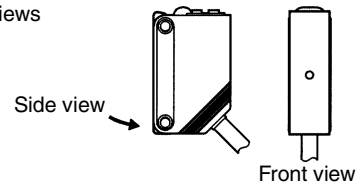


■ Mounting and Adjusting Slits

- Hook the upper protruding portion of the Slit to the upper indented mounting portion of the Sensor and adjust the position of the Slit so that the Slit will be parallel to the lens side of the Sensor. (See area 1, in the illustration below.)
- Then, press the lower protruding portion of the Slit onto the indented mounting portion of the Sensor until the Slit snaps in. (See area 2, shown below.)

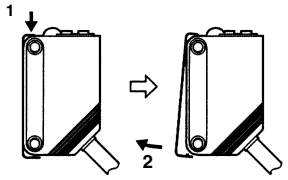


- Mounting views



Removal Method

- Press the upper portion of the Slit. (See area 1, shown below.)
- Then, disconnect the lower protruding portion of the Slit from the Sensor and remove the Slit. (See area 2, shown below.)



ALL DIMENSIONS SHOWN ARE IN MILLIMETERS.
