## Functional Block Diagram

## General Description

The TriQuint TGF3015-SM is a 10W ( $P_{3dB}$ ), 50 $\Omega$ -input matched discrete GaN on SiC HEMT which operates from 30MHz to 3.0 GHz. The integrated input matching network enables wideband gain and power performance, while the output can be matched on board to optimize power and efficiency for any region within the band.

The device is housed in an industry-standard 3 x 3 mm package that saves real estate of already space-constrained handheld radios.

Lead-free and ROHS compliant

Evaluation boards are available upon request.
