

# High Speed Optocoupler, 100 kBd, Low Input Current, Photodiode Darlington Output

## DESIGN SUPPORT TOOLS

[click logo to get started](#)

## DESCRIPTION

High common mode transient immunity and very high current ratio together with 5300  $V_{RMS}$  insulation are achieved by coupling an LED with an integrated high gain photo detector in an eight pin dual-in-line package. Separate pins for the photo diode and output stage enable TTL compatible saturation voltages with high speed operation.

Access to the base terminal allows adjustment to the gain bandwidth.

The 6N139 is suited for low power logic applications involving CMOS and low power TTL applications. A 400 % current transfer ratio with only 0.5 mA of LED current is guaranteed.

**Caution:** Due to the small geometries of this device, it should be handled with Electrostatic Discharge (ESD) precautions. Proper grounding would prevent damage further and/or degradation which may be induced by ESD.

## FEATURES

- High current transfer ratio, 500 %
